1. THE FOLLOWING SHOULD ALWAYS BE OBSERVED FOR SAFETY

- Be sure to read “THE FOLLOWING SHOULD ALWAYS BE OBSERVED FOR SAFETY” before installing the air conditioner.
- Be sure to observe the cautions specified here as they include important items related to safety.
- The indications and meanings are as follows.

⚠️ WARNING

Could lead to death, serious injury, etc.

⚠️ CAUTION

Could lead to serious injury in particular environments when operated incorrectly.

- After reading this manual, be sure to keep it together with the OPERATING INSTRUCTIONS in a handy place on the customer’s site.

2. SELECTING THE INSTALLATION LOCATION

2-1 INDOOR UNIT

- Where airflow is not blocked.
- Where cool air spreads over the entire room.
- Maximum refrigerant piping length between indoor unit and outdoor unit is 20 m and the difference of height of both units is 12 m.
- Rigid wall without vibration.
- Where it is not exposed to direct sunshine.
- Where easily drained.
- At a distance 1 m or more away from your TV and radio. Operation of the air conditioner may interfere with radio or TV reception in areas where reception is weak. An amplifier may be required for the affected device.
- In a place where it is humid (so the infrared remote control can operate the air conditioner normally).
- Where the air filter can be removed and replaced easily.
- Where it is not exposed to strong wind.
- Where airflow is good and dustless.
- Where it is not exposed to rain and direct sunshine.
- Where neighbours are not annoyed by operation sound or hot air.
- Where rigid wall or support is available to prevent the increase of operation sound or vibration.
- Where there is no risk of combustible gas leakage.
- Where it is at least 3 m away from the antenna of TV set or radio. Operation of the air conditioner may interfere with radio or TV reception in areas where reception is weak. An amplifier may be required for the affected device.
- Install the unit horizontally.
- Please install it in an area not affected by snowfall or blowing snow. In areas with heavy snow, please install a canopy, a pedestal and/or some baffle boards.

Note:
It is advisable to make a piping loop near outdoor unit so as to reduce vibration transmitted from there.

2-2 OUTDOOR UNIT

- Where it is not exposed to strong wind.
- Where it is not exposed to rain and direct sunshine.
- Where neighbours are not annoyed by operation sound or hot air.
- Where rigid wall or support is available to prevent the increase of operation sound or vibration.
- Where there is no risk of combustible gas leakage.
- Where it is at least 3 m away from the antenna of TV set or radio. Operation of the air conditioner may interfere with radio or TV reception in areas where reception is weak.
- Install the unit horizontally.
- Please install it in an area not affected by snowfall or blowing snow. In areas with heavy snow, please install a canopy, a pedestal and/or some baffle boards.

Note:
It is advisable to make a piping loop near outdoor unit so as to reduce vibration transmitted from there.

2-3 WIRELESS REMOTE CONTROLLER MOUNTING

- Place of mounting
  - Where it is easy to operate and easily visible.
  - Where children can not touch.
- Mounting
  - Select a position about 1.2 m above the floor, check that signals from the remote controller are surely received by the indoor unit from that position (‘beep’ or ’beepbeep’ receiving tone sounds). After that, attach remote controller holder to a pillar or wall and set the wireless remote controller.

In rooms where inverter type fluorescent lamps are used, the signal from the wireless remote controller may not be received.
3. INSTALLATION DIAGRAM & ACCESSORIES

FLARED CONNECTIONS
- This unit has flared connections on both indoor and outdoor sides.
- Remove the outdoor units valve cover, then connect the pipe.
- Refrigerant pipes are used to connect the indoor and outdoor units.
- Be careful not to crush or bend the pipe in pipe bending.

- Refrigerant adjustment... If pipe length exceeds 7 m, additional refrigerant (R410A) charge is required.
  (The outdoor unit is charged with refrigerant for pipe length up to 7 m.)

<table>
<thead>
<tr>
<th>Limits</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Pipe length</td>
<td>20 m max.</td>
</tr>
<tr>
<td>Height difference</td>
<td>12 m max.</td>
</tr>
<tr>
<td>No. of bends</td>
<td>10 max.</td>
</tr>
</tbody>
</table>

- Refrigerant adjustment... If pipe length exceeds 7 m, additional refrigerant (R410A) charge is required.
  (The outdoor unit is charged with refrigerant for pipe length up to 7 m.)

<table>
<thead>
<tr>
<th>Pipe length</th>
<th>Up to 7 m</th>
<th>No additional charge is required.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Exceeding 7 m</td>
<td>Additional charge is required.</td>
<td></td>
</tr>
</tbody>
</table>

- Refrigerant to be added: 30 g/m² (refrigerant piping length (m) - 5)

ACCESSORIES
Check the following parts before installation.

- Indoor unit>
  1. Installation plate
  2. Installation plate fixing screw 4 × 25 mm
  3. Remote controller holder
  4. Fixing screw for [2.5 × 16 mm (Black)]
  5. Battery (AAA) for remote controller
  6. Wireless remote controller
  7. Felt tape (Used for left or left-rear piping)

PART TO BE PROVIDED AT YOUR SITE
Optional extension pipe

- Indoor/outdoor unit connecting wire (4-core 1.0 mm²)
- Extension pipe
- Wall hole sleeve
- Wall hole cover
- Pipe fixing band (The quantity depends on the pipe length.)
- Fixing screw for [4 × 20 mm (The quantity depends on the pipe length.)
- Piping tape
- Putty
- Drain hose (or soft PVC, hose, 15 mm inner dia. or hard PVC pipe VP16)
- Refrigeration oil
- Power supply cord (See the table in 5-1 POWER SUPPLY CORD AND INDOOR/OUTDOOR UNIT CONNECTING WIRE CONNECTION for the cord size.)

PIPING PREPARATION

1. Specifications
   Use the refrigerant pipes that meet the following specifications.

<table>
<thead>
<tr>
<th>Pipe</th>
<th>Outside diameter</th>
<th>Insulation thickness</th>
<th>Insulation material</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>mm</td>
<td>mm</td>
<td></td>
</tr>
<tr>
<td>For liquid</td>
<td>6.35</td>
<td>8</td>
<td>Heat resisting foam plastic</td>
</tr>
<tr>
<td>For gas</td>
<td>9.52</td>
<td>8</td>
<td>0.045 specific gravity</td>
</tr>
</tbody>
</table>

- Use a copper pipe or a copper-alloy seamless pipe with a thickness of 0.8 mm.
  Never use any pipe with a thickness less than 0.8 mm, as the pressure resistance is insufficient.
- Ensure that the 2 refrigerant pipes are insulated to prevent condensation.
- Refrigerant pipe bending radius must be 100 mm or more.

CAUTION
Be sure to use the insulation of specified thickness. Excessive thickness may cause incorrect installation of the indoor unit and lack of thickness may cause dew dripping.

PIPING PREPARATION

- Refrigerant adjustment... If pipe length exceeds 7 m, additional refrigerant (R410A) charge is required.
  (The outdoor unit is charged with refrigerant for pipe length up to 7 m.)

- Refrigerant to be added: 30 g/m² (refrigerant piping length (m) - 5)

ACCESSORIES
Check the following parts before installation.

- Indoor unit>
  1. Installation plate
  2. Installation plate fixing screw 4 × 25 mm
  3. Remote controller holder
  4. Fixing screw for [2.5 × 16 mm (Black)]
  5. Battery (AAA) for remote controller
  6. Wireless remote controller
  7. Felt tape (Used for left or left-rear piping)

PART TO BE PROVIDED AT YOUR SITE
Optional extension pipe

- Indoor/outdoor unit connecting wire (4-core 1.0 mm²)
- Extension pipe
- Wall hole sleeve
- Wall hole cover
- Pipe fixing band (The quantity depends on the pipe length.)
- Fixing screw for [4 × 20 mm (The quantity depends on the pipe length.)
- Piping tape
- Putty
- Drain hose (or soft PVC, hose, 15 mm inner dia. or hard PVC pipe VP16)
- Refrigeration oil
- Power supply cord (See the table in 5-1 POWER SUPPLY CORD AND INDOOR/OUTDOOR UNIT CONNECTING WIRE CONNECTION for the cord size.)

Note:
When operating the air conditioner in low outside temperature, be sure to follow the instructions described below.
- Never install the outdoor unit in a place where its air inlet/outlet side may be exposed directly to wind.
- To prevent exposure to wind, install the outdoor unit with its air inlet side facing the wall.
- To prevent exposure to wind, it is recommended to install a baffle board on the air outlet side of the outdoor unit.

Units should be installed by licensed contractor according to local code requirement.
4. INDOOR UNIT INSTALLATION

4-1 FIXING OF INSTALLATION PLATE

- Find a structural material (such as a stud) in the wall and fix installation plate horizontally.

To prevent the installation plate from vibrating, be sure to fix the holes as indicated by the arrows.

When bolts recessed in the concrete wall are to be utilized, secure the installation plate using 11 × 20 - 11 × 26 oval hole (450 mm pitch).

If the recessed bolt is too long, change it for a shorter one available in the market.

4-2 WALL HOLE DRILLING

1. Determine the wall hole position.
2. Drill a 65 mm hole so that outside can be lower than inside.
3. Insert the wall hole sleeve.

Positioning of the holes on the wall

- Repeat the same procedure for the left hole.

Wall hole sealing and fixing pipe to wall

Seal the wall hole gap with putty. Fix the pipe to wall with pipe fixing band.

4-3 INDOOR/OUTDOOR UNIT CONNECTING WIRE SPECIFICATIONS

- Use special room air conditioning circuit.

Indoor/outdoor unit connecting wire Specification

Cable 4-core 1.0 mm², in conformity with Design 245 IEC 57.

⚠️ WARNING

Never cut the indoor and outdoor unit connecting wire and connect it to other wires. It may cause a fire.

Do not bundle the spare wire, but put it as shown below.

4-4 INDOOR AND OUTDOOR CONNECTING WIRE CONNECTION

You can connect indoor/outdoor lead wire without removing the front panel.

1. Remove the corner box.
2. Remove the VA clamp.
3. Process the end of the earth wire and connect the wire to the earth terminal of the electrical parts box.
4. Process the end of the indoor/outdoor unit connecting wire and fix the wire to the terminal block.
5. Secure the indoor/outdoor unit connecting wire and the earth wire with the VA clamp.
6. Reinstall the corner box.

4-5 HOW TO SWITCH OVER <REMOTE CONTROLLER>

The details of SLIDE SWITCH

1. Remove the front lid.
2. Be sure to set the slide switch inside the remote controller to an appropriate position in accordance with the installed position of the indoor unit. If the switch is not set correctly, the air conditioner may not function properly.

<table>
<thead>
<tr>
<th>Area</th>
<th>Left</th>
<th>Center</th>
<th>Right</th>
</tr>
</thead>
<tbody>
<tr>
<td>Position of the slide switch</td>
<td>LCR</td>
<td>LCR</td>
<td>LCR</td>
</tr>
<tr>
<td>Display on the remote controller</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Where is the indoor unit installed in the room?

Installed at left, if the distance is not more than 50 cm.
Installed at left, if the distance is not more than 50 cm.
Installed at left, if the distance is not more than 50 cm.

Is the indoor unit installed at right, left or center?

* If the indoor unit is installed more than 50 cm away from the side walls, cabinets or other nearby objects, set the slide switch to the “center” position.
4-6 AUTO RESTART FUNCTION

- These models are equipped with an auto restart function. If you do not want to use this function, please consult the service representative because the setting of the unit needs to be changed.

- When the indoor unit is controlled with the remote controller, the operation mode, the set temperature, and the fan speed are memorized by the indoor electronic control P.C. board. The auto restart function sets to work the moment the power has restored after power failure, then the unit will restart automatically. If the unit is operated in “AUTO” mode before power failure, the operation mode (COOL, DRY or HEAT) is not stored in the memory. When the main power is turned on, the unit decides the operation mode by the initial room temperature at restart and starts operation again.

Operation

1. If the main power has been cut, the operation settings remain.
2. When three minutes have passed after power was restored, the unit will restart automatically according to the memory.

Notes:

- The operation settings are memorized when 10 seconds have passed after the remote controller was operated.
- If the main power is turned off or a power failure occurs while AUTO START/STOP timer is active, the timer setting is cancelled. As these models are equipped with an auto restart function, the air conditioner starts operating with timer cancelled at the same time that power is restored.
- If the unit has been off with the remote controller before power failure, the auto restart function does not work as the power button of the remote controller is off.
- To prevent breaker off due to the rush of starting current, systematize other home appliances not to turn on at the same time.

4-7 PIPE FORMING

- Place the drain hose below the refrigerant piping.
- Make sure that the drain hose is not heaved or snaked.
- Do not pull the hose to apply the tape.
- When the drain hose passes the room, be sure to wrap insulation material (obtainable at a store) around it.
- Wrap the felt tape around the pipe and the drain hose, then put the pipe in the back space of the indoor unit.

FOR REAR, RIGHT OR DOWNWARD PIPING

- Pipe arrangement
  Put the refrigerant piping and the drain hose together, then apply piping tape to them.

- Insert the piping and the drain hose into the wall hole sleeve, and hook the upper part of the indoor unit on the installation plate.
- Check if the indoor unit is hooked securely on the installation plate by moving the unit to left and right.
- Thrust the lower part of the indoor unit into the installation plate.

FOR LEFT OR LEFT-REAR PIPING

- Pipe arrangement
  Put the refrigerant piping and the drain hose together, then apply felt tape to them.
**INDOOR UNIT INSTALLATION**
- Insert the drain hose into the wall hole sleeve 1, and hook the upper part of indoor unit on the installation plate. Then, move the unit to the very edge of the left side for putting the piping easily in the back space of the indoor unit. After that, cut a part of packing material, then roll it as shown below and use it as a spacer to hook on the back rib and lift the indoor unit.

- Connect the refrigerant piping with the extension pipe.
- Thrust the lower part of the indoor unit into the installation plate.

**4-8 DRAIN PIPING**
- If the extension drain hose has to pass through a room, be sure to wrap it with commercially sold insulation.
- The drain hose should point downward for easy drain flow. (Fig. 1) Do not make drain piping as shown in Fig. 2 to 5.

**5. OUTDOOR UNIT INSTALLATION**

**POWER SUPPLY CORD AND INDOOR/OUTDOOR UNIT CONNECTING WIRE CONNECTION**
- Connect the indoor/outdoor unit connecting wire from the indoor unit correctly on the terminal block.
- Connect the power supply cord.
- For future servicing, give extra length to connecting wire.

- Peel off both ends of connecting wire (extension wire).
- Be careful not to connect connecting wire with piping.
- Make earth wire a little longer than the others. (more than 35 mm)

- For the indoor/outdoor unit connecting wires, be sure to use the ones in compliance with the standards.
- Be sure to push the core until it is hidden and pull each cable to make sure that it is not pulled up incomplete insertion may cause a risk of burning the terminal blocks.
6. INDOOR/OUTDOOR UNIT CONNECTION
FINISHING AND TEST RUN

INSTALLATION INFORMATION FOR THE AIR CONDITIONER WITH R410A REFRIGERANT

- This room air conditioner adopts an HFC refrigerant (R410A) which will never destroy the ozone layer.
- Pay particular attention to the following points, though the basic installation procedure is same as that for R22 air conditioners.
  1. As R410A has a working pressure approx. 1.6 times as high as that of R22, some special tools and piping parts / materials are required. (Refer to the table below.)
  2. Take sufficient care not to allow water and other contaminations to enter the R410A refrigerant during storage and installation, since it is more susceptible to contaminations than R22.
  3. For refrigerant piping, use clean, pressure-proof parts / materials specifically designed for R410A.
  4. Composition change may occur in R410A since it is a mixed refrigerant. When charging, charge liquid refrigerant to prevent composition change.

6-1 Tools dedicated for the air conditioner with R410A refrigerant

The following tools are required for R410A refrigerant. Some R22 tools can be substituted for R410A tools.

<table>
<thead>
<tr>
<th>R410A tools</th>
<th>Can R22 tools be used?</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Gauge manifold</td>
<td>No</td>
<td>R410A has high pressures beyond the measurement range of existing gauges. Port diameters have been changed to prevent any other refrigerant from being charged into the unit.</td>
</tr>
<tr>
<td>Charge hose</td>
<td>No</td>
<td>Hose material and cap size have been changed to improve the pressure resistance.</td>
</tr>
<tr>
<td>Gas leak detector</td>
<td>Yes</td>
<td>Dedicated for HFC refrigerant.</td>
</tr>
<tr>
<td>Torque wrench</td>
<td>1/4 and 3/8</td>
<td></td>
</tr>
<tr>
<td>Flare tool</td>
<td>Yes</td>
<td>Clamp bar hole has been enlarged to reinforce the spring strength in the tool.</td>
</tr>
<tr>
<td>Flare gauge</td>
<td>New</td>
<td>Provided for flaring work (to be used with R22 flare tool).</td>
</tr>
<tr>
<td>Vacuum pump adaptor</td>
<td>New</td>
<td>Provided to prevent the back flow of oil. This adaptor enables you to use existing vacuum pumps.</td>
</tr>
<tr>
<td>Electronic scale for refrigerant charging</td>
<td>New</td>
<td>It is difficult to measure R410A with a charging cylinder because the refrigerant bubbles due to high pressure and high-speed vaporization.</td>
</tr>
</tbody>
</table>

No: Not substitutable for R410A Yes: Substitutable for R410A

6-2 FLARING WORK

- Main cause of gas leakage is defect in flaring work. Carry out correct flaring work in the following procedure.

1. Pipe cutting
   - Cut the copper pipe correctly with pipe cutter.

2. Burrs removal
   - Completely remove all burrs from the cut cross section of pipe.
   - Put the end of the copper pipe to downward direction as you remove burrs in order to avoid letting burrs drop in the piping.

3. Putting nut on
   - Remove flare nuts attached to indoor and outdoor units, then put them on pipe having completed burr removal. (not possible to put them on after flaring work)
   - Flare nut for R410A pipe differs from R22 pipe. Refer to the following table for detail.

<table>
<thead>
<tr>
<th>Outside diameter</th>
<th>A (mm)</th>
<th>Flare tool for R410A</th>
<th>Conventional flare tool</th>
</tr>
</thead>
<tbody>
<tr>
<td>ø6.35 mm</td>
<td>0 to 0.5</td>
<td>1.0 to 1.5</td>
<td>1.5 to 2.0</td>
</tr>
<tr>
<td>ø9.52 mm</td>
<td>0 to 0.5</td>
<td>1.0 to 1.5</td>
<td>1.5 to 2.0</td>
</tr>
</tbody>
</table>

4. Flaring work
   - Carry out flaring work using flaring tool as shown below.
   - Firmly hold copper pipe in a die in the dimension shown in the table above.

5. Check
   - Compare the flared work with figure below.
   - If flare is noted to be defective, cut off the flared section and do flaring work again.

6-3 PIPE CONNECTION

Note:
Fasten a flare nut with a torque wrench as specified in the table below.
When fastened too tight, a flare nut may break after a long period and cause a leakage of refrigerant.

1. Indoor unit connection
   - Connect both liquid and gas pipings to indoor unit.
   - Apply a thin coat of refrigeration oil to the contact surface of all pipe parts. This prevents liquid refrigerant from entering the indoor unit with the oil.
   - Use a charging hose to charge refrigerant. After charging, use a gas leak detector to confirm that the area is safe to install the indoor unit.
   - Use tightening torque table below as a guideline for indoor unit side union joint section, and tighten using two wrenches. Excessive tightening damages the flared section.

<table>
<thead>
<tr>
<th>Pipe diameter</th>
<th>ø6.35 mm</th>
<th>ø9.52 mm</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tightening torque</td>
<td>13.7 to 17.7</td>
<td>34.3 to 41.2</td>
</tr>
<tr>
<td>N·m</td>
<td>kgf·cm</td>
<td>N·m</td>
</tr>
<tr>
<td>13.7 to 17.7</td>
<td>130 to 180</td>
<td>34.3 to 41.2</td>
</tr>
</tbody>
</table>

2. Outdoor unit connection
   - Connect pipes to stop valve pipe joint of the outdoor unit in the same manner applied for indoor unit.
   - For tightening, use a torque wrench or spanner and use the same tightening torque applied for indoor unit.

INSULATION AND TAPING

1. Cover piping joints with pipe cover.
2. For outdoor unit side, surely insulate every piping including valves.
3. Using piping tape, apply taping starting from the entry of outdoor unit.
4. Stop the end of piping tape with tape (with adhesive agent attached).
5. When piping have to be arranged through above ceiling, closet or where the temperature and humidity are high, wind additional commercially sold insulation for prevention of condensation.
6-4 PURGING PROCEDURES LEAK TEST

**PURGING PROCEDURES**

- Connect the refrigerant pipes (both liquid pipe and the gas pipe) between the indoor and the outdoor unit.
- Remove the service port cap of the stop valve on the side of the outdoor unit gas pipe. (The stop valve will not work in its initial state fresh out of the factory (totally closed with cap on).)
- Connect the gauge manifold valve and the vacuum pump to the service port of the stop valve on the gas pipe side of the outdoor unit.
- Run the vacuum pump. (Vacuumize for more than 15 minutes.)
- Check the vacuum with the gauge manifold valve, then close the gauge manifold valve, and stop the vacuum pump.
- Leave as it is for one or two minutes. Make sure the pointer gauge manifold valve remains in the same position. Confirm that the pressure gauge shows –0.101 Mpa (Gauge) [–760 mmHg].
- Remove the gauge manifold valve quickly from the service port of the stop valve.
- After refrigerant pipes are connected and evacuated, fully open all stop valves on both sides of gas pipe and liquid pipe. Operating without fully opening lowers the performance and this causes trouble.
- Pipe length up to 7 m No gas charge is needed.
- Pipe length exceeding 7 m Charge the prescribed amount of gas. (refer to 3)
- Tighten the cap to the service port to obtain the initial status.
- Relighten the cap.
- Leak test

**Tightening torque**

<table>
<thead>
<tr>
<th>N·m</th>
<th>kgf·cm</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cap for service port</td>
<td>13.7 to 17.7</td>
</tr>
<tr>
<td>Cap for stop valve</td>
<td>19.6 to 29.4</td>
</tr>
</tbody>
</table>

6-5 TEST RUN

- Before performing the test run, recheck for any wrong wiring.
- Wrong wiring prevents normal operation or results in blown fuse disabling operation.
- The test run can be started by pressing EMERGENCY OPERATION switch. When the EMERGENCY OPERATION switch is once pressed, the unit will start the test run (continuous operation) for 30 minutes.
- A thermostat does not work during this time. After 30 minutes the unit will start the EMERGENCY OPERATION at a fixed temperature setting of 24 eXC in COOL MODE.
- Perform test run in the following procedure.

**PROCEDURE**

- Press the EMERGENCY OPERATION switch.
  
  **Note:**
  Three seconds after the EMERGENCY OPERATION switch is pressed, the auto front panel starts moving forward. Close the front panel before it starts moving.
  1. Press it once, and after test run for 30 minutes the EMERGENCY COOL MODE starts.
  2. If the left side lamp of the operation indicator blinks every 0.5 seconds, inspect the indoor/outdoor unit connecting wire for mis-wiring.
  3. Press it once more, and the EMERGENCY HEAT MODE starts.
  4. Press it once more, and the operation stops. (The operation mode changes in order of ① ~ ③ every time the EMERGENCY OPERATION switch is pressed.)

6-6 CHECKING AFTER INSTALLATION

- After finishing the installation, check the following items and mark the next to each item.
  - Is the specified power supply voltage used?
  - Is the power line equipped with the circuit breaker?
  - Have the ends of the indoor/outdoor connecting wire been properly inserted into the terminal block?
  - Has the indoor/outdoor connecting wire been secured firmly?
  - Are the power supply cord and indoor/outdoor connecting wire connected directly to the units (no intermediate connections)?
  - Is the earth wire longer than the other wires so that it will not become disconnected when tension is applied?
  - Is the earth wire connected properly?
  - Are the pipes designed for use with R410A or do they have the specified thickness?
  - Have the leak test been carried out for the pipe connections?
  - Has air purging been carried out?
  - Are the stop valves open fully?
  - Is the drain hose properly installed?
  - Has water been poured through the drain hose to confirm proper drainage?
  - Are the pipes at the rear of the unit bundled with felt tape (for left and left-rear piping noise?)
  - Is the area under the unit free of objects that block the air outlet?
  - Has the test run been carried out?
  - Has the drain work been performed properly and are there no bubbling sounds?
  - Have all of the WARNING and CAUTION items in “1. THE FOLLOWING SHOULD ALWAYS BE OBSERVED FOR SAFETY” been checked?

6-7 EXPLANATION TO THE CUSTOMER

- Using the OPERATING INSTRUCTIONS, explain the following to the customer, how to control temperature, how to remove the air filters, how to remove or put the remote controller in the remote controller holder, how to clean, precautions for operation, etc.
- Recommend the customer to read the OPERATING INSTRUCTIONS carefully.
### 7. FOR MOVEMENT AND MAINTENANCE

#### 7-1 HOW TO REMOVE AND INSTALL THE PANEL ASSEMBLY

**Removal procedure**

1. Remove the front panel and the horizontal vane.
2. Remove the 3 screws which fix the panel assembly.
3. Remove the panel assembly. Be sure to remove its bottom end first.

**Diagram**

![Panel Assembly Diagram]

**Installation procedure**

Install the panel assembly following the removal procedure 1 to 3 (described above) in reverse. After having attached the panel assembly, be sure to press the positions as indicated by the arrows in order to attach the assembly completely to the unit.

![Panel Assembly Diagram]

- Refer to the OPERATING INSTRUCTIONS for the details of removing and installing the front panel and the horizontal vane.

#### 7-2 PUMPING DOWN

When relocating or disposing of the air conditioner, pump down the system following the procedure below so that no refrigerant is released into the atmosphere.

1. Connect the gauge manifold valve to the service port of the stop valve on the gas pipe side of the outdoor unit.
2. Fully close the stop valve on the liquid pipe side of the outdoor unit.
3. Close the stop valve on the gas pipe side of the outdoor unit almost completely so that it can be easily closed fully when the pressure gauge shows −0.101 MPa [Gauge] (0 kgf/cm²).
4. Start the test run operation in COOL MODE by pressing EMERGENCY OPERATION switch once.
5. Fully close the stop valve on the gas pipe side of the outdoor unit when the pressure gauge shows 0.05 to 0 MPa [Gauge] (approx. 0.5 to 0 kgf/cm²).
6. Stop the test run operation by pressing the EMERGENCY OPERATION switch twice.

#### 7-3 REMOVING THE INDOOR UNIT

Remove the bottom of the indoor unit from the installation plate.

**When releasing the corner part**

Release both left and right bottom corner part of indoor unit and pull it downward and forward as below to release the hooks.

### 7-4 GAS CHARGE

1. Connect gas cylinder to the service port of stop valve (3-way).
2. Execute air purge of the pipe (or hose) coming from refrigerant gas cylinder.
3. Replenish specified amount of the refrigerant, while operating the air conditioner for cooling.

**Note:**

In case of adding refrigerant, comply with the quantity specified for the refrigerating cycle.

**CAUTION**

- Do not discharge the refrigerant into the atmosphere.
  Take care not to discharge refrigerant into the atmosphere during installation, reinstallation, or repairs to the refrigerant circuit.
- When charging the refrigerant system with additional refrigerant, be sure to use liquid refrigerant.
  Adding gas refrigerant may change the composition of the refrigerant in the system and affect normal operation of the air conditioner. Also, charge the system slowly, otherwise the compressor will be locked.

To maintain the high pressure of the gas cylinder, warm the gas cylinder with warm water (under 40°C) during cold season. But never use naked fire or steam.

---

**MITSUBISHI ELECTRIC CORPORATION**

HEAD OFFICE: TOKYO BLDG., 2-7-3, MARUNOUCHI, CHIYODA-KU, TOKYO 100-8310, JAPAN
