#### PAR-21MAA Control

- Standard equipment (for indoor units compatible with wired remote controllers)

#### Details

- Wired remote controller can be connected to indoor unit
- MAC-397IF-E (interface)
- PAR-21MAA (Wired remote controller)
- MAC-399IF-E (interface)
- PAR-21MAA (Wired remote controller)

#### Major Optional Parts Required

- **Group Control**
  - System Group Control
    - One remote controller can control plural air conditioners with the same settings simultaneously.
    - Up to two remote controllers can be connected.

- **Centralised On/Off Control**
  - Up to 8 indoor units can be switched On/Off with one remote controller.

- **M-NET Connections**
  - Group of air conditioners can be controlled by MELANS system controller (M-NET).

- **Details**
  - MAC-397IF-E (interface)
  - MAC-821SC-E (Centralised remote controller)
  - MAC-SC50KA (power supply unit)

- **Major Optional Parts Required**
  - MAC-399IF-E (M-NET Interface)
  - MELANS System controller
  - MAC-SC50KA (power supply unit)
  - MAC-SC50KA (power supply unit)

Weekly Timer: On/Off and up to 8 pattern temperatures can be set for each calendar day. (Initial setting)
Simple Timer: On/Off can be set once each within 72 hr in intervals of one hour.
Auto-off Timer: Operation will be switched off after a certain time elapse. Set time can be changed from 30 min. to 4 hr. at 30 min. intervals.
* Simple Timer and Auto-off Timer cannot be used at the same time.
Standard functions of PAR-21MAA
REPLACEMENT OF THE AIR CLEANING FILTER

When the capacity is lowered because of dirt, etc., it is necessary to replace the air cleaning filter.

Air cleaning filter replacement (about once every 4 months)

1. Remove the catechin air filter.
2. Remove the air cleaning filter (White bellows type).
3. Install a new air cleaning filter.
4. Install the catechin air filter and securely.

• If the air cleaning filter is clogged, it may lower the unit's capacity or cause condensation at the air outlet.
• The air cleaning filter is disposable. The standard usable term is about 4 months. However, if the color of the filter turns to dark brown, replace the filter at once.
Air Cleaning Filter

Descriptions
- Air Cleaning Filter removes fine dust of 0.01 micron from air by means of static electricity.
- DO NOT reuse Air Cleaning Filter even if it is washed.

Applicable Models
- MS(H)-GE50VB
- MS(H)-GA60VB
- MS(H)-GD80VB

Air cleaning filter
- If the air cleaning filter is clogged, it may lower the unit's capacity or cause condensation at the air outlet.
- The air cleaning filter is disposable. The standard usable term is about 4 months. However, if the colour of the filter turns to dark brown, replace the filter at once.
Minimum holes as small as 1 nanometer on a surface of approximately 3,000m² capture small foul-smelling substances in the air, then break down the source of the odors with the power of the ozone generated in a plasma electrode unit and the platinum catalyst contained in the filter.

**How to Use / How to Install**

1. Lift the front panel until a “click” is heard.
2. Hold the hinges and pull to remove as shown in the above illustration.
   - Wipe with a soft dry cloth or wash it with water.
   - Do not soak it in water for more than two hours.
   - Dry it well in shade before installing it.
3. Install the panel by following the removal procedure in reverse. Close the front panel securely and press the positions indicated by the arrows.

**Every 3 months:**
- Remove dirt by a vacuum cleaner, or soak the filter in lukewarm water (30 to 40°C) for about 15 minutes. Rinse well.
- After washing, dry it well in shade and put it back to its original position.
- Deodorizing feature recovers by cleaning the filter.

**When dirt or smell cannot be removed by cleaning:**
- Replace it with a new air cleaning filter.
- Parts Number [MAC-307FT-E](#)
This filter catches dead mites and their droppings, pollen and other allergens on the filter filament, then decomposes them with artificial enzymes.
(Artificial enzyme catalyst on the filament catches the allergens and helps the chemical reaction with Oxygen and severs the S-S* bonds. *S=Sulfur atoms)

### Applicable Models

### Dimensions

Unit : mm

1. **How to Use / How to Install**

   **REPLACEMENT OF THE AIR CLEANING FILTER (OPTION)**

   **Air cleaning filter replacement**

   1. Remove the catechin air filter.

   2. Remove the air cleaning filter (Anti-allergy enzyme filter: blue bellows type).

   **Air cleaning filter**

   - If the air cleaning filter is clogged, it may lower the unit’s capacity or cause condensation at the air outlet.
   - If AIR CLEANING FILTER is to be washed, soak AIR CLEANING FILTER in water (when showing dirt, in lukewarm water) and rinse it delicately, without removing the filter from the frame about once every 3 months.

   **Every year**

   1. Install a new air cleaning filter.

   2. Install the catechin air filter and securely close the front panel.
Anti-Allergy Enzyme Filter

This filter catches dead mites and their droppings, pollen and other allergens on the filter filament, then decomposes them with artificial enzymes. (Artificial enzyme catalyst on the filament catches the allergens and helps the chemical reaction with Oxygen and severs the S-S bonds. *S=Sulfur atoms)

How to Use / How to Install

1. Remove the catechin air filter.  
   Open the front grille

2. Remove the air cleaning filter.

3. Securely close the front grille.

Every year

1. Attach a new air cleaning filter. Fix the filter with the tabs securely.

2. Install the catechin air filter.  
   Be sure to install its both ends into the tabs as shown below.

Air cleaning filter replacement

1. Remove the catechin air filter.

Air cleaning filter replacement

- If the air cleaning filter is clogged, it may lower the unit’s capacity or cause condensation at the air outlet.
- If AIR CLEANING FILTER is to be washed, soak AIR CLEANING FILTER in water (when showing dirt, in lukewarm water) and rinse it delicately, without removing the filter from the frame about once every 3 months.
**Anti-Allergy Enzyme Filter**

### Photo
![Photo of the filter]

### Descriptions
This filter catches dead mites and their droppings, pollen and other allergens on the filter filament, then decomposes them with artificial enzymes. (Artificial enzyme catalyst on the filament catches the allergens and helps the chemical reaction with Oxygen and severs the S-S* bonds. *S=Sulfur atoms)

### How to Use / How to Install

#### Front panel
1. Lift the front panel until a "click" is heard.
2. Hold the hinges and pull to remove as shown in the above illustration.
   - Wipe with a soft dry cloth or wash it with water.
   - Do not soak it in water for more than two hours.
   - Dry it well in shade before installing it.
3. Install the panel by following the removal procedure in reverse. Close the front panel securely and press the positions indicated by the arrows.

#### Back side of air filter
- **Clean every 3 months.**
- Soak the filter together with its frame in lukewarm water and wash it.
- After washing, dry it well in shade and put it back to its original position.
- Install all tabs of the air filter.
- Replace it with a new air cleaning filter **every year** for best performance.
- Parts Number: MAC-408FT-E

**What is “Catechin air filter”?**
Catechin is a bioflavonoid that is found in green tea that has both antiviral and antioxidant qualities. In addition to these benefits, Catechin also offers excellent deodorizing characteristics. Catechin air filter uses this compound to not only improve air quality but also prevent the spread of bacteria and viruses in the room.

What is "Catechin air filter"?
Catechin is a bioflavonoid that is found in green tea that has both antiviral and antioxidant qualities. In addition to these benefits, Catechin also offers excellent deodorizing characteristics. Catechin air filter uses this compound to not only improve air quality but also prevent the spread of bacteria and viruses in the room.
The power of the static electricity charged in the filter and
the plasma generated in the plasma electrode unit team
up to capture the bacteria, pollen and other allergens in the
air, which are then neutralized with the enzyme in the filter.

**Applicable Models**
- MSZ-FD25VA(S)
- MSZ-FD35VA(S)
- MSZ-FD50VA(S)

**Specifications**

**How to Use / How to Install**

1. Lift the front panel until a “click” is heard.
2. Hold the hinges and pull to remove as shown in the above illustration.
   - Wipe with a soft dry cloth or wash it with water.
   - Do not soak it in water for more than two hours.
   - Dry it well in shade before installing it.
3. Install the panel by following the removal procedure in reverse. Close the front panel securely and press the positions indicated by the arrows.

**Front panel**

- **Every 3 months:**
  - Remove dirt by a vacuum cleaner, or soak the filter in lukewarm water (30 to 40°C) for about 15 minutes. Rinse well.
  - After washing, dry it well in shade and put it back to its original position.
  - Odorizing feature recovers by cleaning the filter.
  - When dirt or smell cannot be removed by cleaning:
    - Replace it with a new air cleaning filter.
    - Parts Number: MAC-417FT-E
Catechin is a bioflavonoid that is found in green tea that has both antiviral and antioxidant qualities. In addition to these benefits, Catechin also offers excellent deodorizing characteristics. Catechin air filter uses this compound to not only improve air quality but also prevent the spread of bacteria and viruses in the room.

**Applicable Models**
- MSZ-HC25VA
- MSZ-HC35VA(B)

**What is “Catechin air filter”?**
The air filter is dyed with a natural material, catechin, that is contained in tea. The catechin air filter deodorizes odor and noxious gases such as formaldehyde, ammonia, and acetaldehyde. Moreover, it restraints the activity of the viruses adhering to the filter.

**How to Use / How to Install**

1. **Holding the knob on the air filter, pull up the filter slightly and then pull down to remove.**
   - **Remove.**
   - **Open the front panel, then remove/replace the filter.**

2. **Remove dirt from the air filter using a vacuum cleaner or by washing the filter with water.**
   - Do not wash with scrubbing brush or hard surface of sponge. Otherwise, the filter may deform.
   - If the dirt is noticeable, wash the filter with a solution of mild detergent diluted in lukewarm water.
   - If hot water (50°C or more) is used, the filter may be deformed.

3. **After washing with water/lukewarm water, dry the air filter well in the shade.**
   - Do not expose the air filter to direct sunlight or heat from a fire when drying it.

4. **Install the air filter.**
   - (Securely install its tabs.)

How to Use / How to Install

Cleaning the oil filter

1) Removing the oil filter
   ① Remove the filter by sliding it in the direction of an arrow.
   ② Remove the two metal fittings for filter element according to the following procedure. Bend the metal fittings towards ① side (Inside) and then slide them in the direction of ② to remove.
   ③ Replace the filter element (disposable).

   Note:
   Install the filter element within the frame securely.
   ④ Install the metal fittings for filter element in their original positions.
   ⑤ Turn the side of oil filter that the metal fittings are installed downward and install the filter in the unit.

2) Replacing the filter element
   ① Remove the oil filter by sliding it in the direction of an arrow.
   ② Remove the two metal fittings for filter element according to the following procedure. Bend the metal fittings towards ① side (Inside) and then slide them in the direction of ② to remove.
   ③ Replace the filter element (disposable).

   Note:
   If alkaline detergent is used for cleaning, the part made of aluminum could discolor.

3) Cleaning the frame of the oil filter
   Tools to be prepared
   - Protective goods such as a rubber glove
   - Scrubbing brush or brush

   Note:
   Avoid using a metal scrubbing brush or brush since the aluminum materials could be damaged.
   - Household neutral detergent or alkaliescent detergent (for washing dishes or clothes)

   Note:
   If alkaline detergent is used for cleaning, the part made of aluminum could discolor.

Make sure the filter element is removed when cleaning the oil filter.
   ① If the filter is not so dirty (If the filter is cleaned once a week (once per 100 operating hours)). Wash the filter with water and above-mentioned detergent using a scrubbing brush or brush, etc. (It is more effective to wash the filter with lukewarm water.)
   ② If the filter is extremely dirty.
   Put the previously-mentioned detergent (its strength should be about 1/10 of undiluted solution) into hot water whose temperature is 50°C or less, and soak the filter for 1 hour or more before washing.

⚠️ Warning:
To prevent your hand from burning, start washing the filter after the hot water gets cold.
High efficiency filter element

PAC-SH59KF-E

Photo

Descriptions

High Efficiency Filter is a part that remove dust in air. PAC-SH53TM-E (multi-function casement) is required for installation.

</thead>
<tbody>
<tr>
<td></td>
<td>High-efficiency filter element</td>
<td>1</td>
<td></td>
</tr>
</tbody>
</table>

NOTICE
(1) In case that the High-efficiency filter element is installed, it should be installed on the Multi-functional casement which is option. Be sure to purchase the Multi-functional casement.

2 Installation of High-efficiency filter element (same procedure for replacement)

- Remove the intake grille of the Decorative panel in advance. (See the “Installation instructions of decoration panel” for details.)
- Loosen the four screws of bracket for installation of the High-efficiency filter element of the Multi-functional casement as shown right. Then, slide them outside.
- Set the High-efficiency filter element in Multi-functional casement, slide the plate inward, and then tighten the four screws securely.
- When the indoor unit is used with “2 ways” air outlet, the High-efficiency filter element is not available.
- When the High-efficiency filter element is installed, the operation noise can be larger.
- When attaching the High-efficiency filter element, check the direction of air flow, referring to the stamp on the side.

3 Air flow volume setting when High-efficiency filter element is installed

*When the High-efficiency filter element is attached for the first time, the setting for increase in airflow rate must be performed.
*This setting is necessary only when the element is newly attached: No setting is required when the filter is replaced.

**CAUTION** Set up for increasing air flow volume
- If the set up is not done correctly, the air flow volume will decrease and it can lower the performance and cause dew drop.

1) If the indoor unit to be combined is 8A series:
   - Setting must be performed from the remote control: See the pages of “Function Selection” in the installation manual provided with the remote control, (Set optional assembly to “Yes”).
2) If the indoor unit to be combined is other than above:
   - Set switch “SWC” on the address board in indoor unit to the "option" ② side ("standard" at the factory).

4 Replacement Period

- The High-efficiency filter element is single-use (not recyclable).
- The reference for operation time is 2,500 hours (depending on the environment in which the air-conditioner is installed).

**CAUTION**
- Washing with water will degrade the performance and could cause the element to become unusable.
High Efficiency Filter

**Optional Parts**

**Photo**

**Descriptions**

- High Efficiency Filter is a part that removes dust in the air.
  Dust collection efficiency: 70% (Weighing method)
- It is the best for air conditioning of the stove where a lot of people come and go.

i-see sensor corner panel

**Descriptions**
- Both floor and inlet temperatures are measured to provide a comfort sensation fully in a room covering from the ceiling to the floor surfaces.
- Install the I-SEE sensor corner panel to the corner of the decorative panel (the opposite side of refrigerant piping).

**Applicable Models**
- PLA-RP-BA2/BA3

**Specifications**

<table>
<thead>
<tr>
<th>Adapter wiring</th>
<th>Connect the 9-core cord with connector to the indoor controller board of the indoor unit.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Exterior</td>
<td>ABS resin (Munsell No.B.4Y8.8/0.4)</td>
</tr>
</tbody>
</table>

**I-SEE sensor operation**
- When there is great difference between the room temperature and the set temperature, temperatures of four areas are measured once in two minutes. When the room temperature is stable, the i-see sensor rotates.
How to Use / How to Install

1. **Included parts** (This manual and following parts are included.)
   - **Part Number**
     - ① i-see sensor corner panel
     - ② Plastic fastener
   - **Quantity**
     - ① 1
     - ② 2

2. **Preparation before installing the decorative panel**
   - Signal receiver for the remote controller of the updown machine (with the company name)
   - *Installation location cannot be changed.
   - Drain pipe for the unit
   - Refrigerant pipe for the unit

   **Warning**
   - Turn off the main power.
   - *If the main power is not turned off, injury or electric shock may result.
   - Removing the corner panel
     - *It can only be installed at this location with corner panel.
     - If the corner panel with sensor is removed, a problem may occur when installing the decorative panel.
     - Remove the screw on the corner, slide the panel in the direction of the arrow (1) in the figure and remove the corner panel.

3. **Installation of corner panels and air intake grille**
   - *You can set the direction of the air intake grille such as grids when installing multiple units as desired. If forced to be set at other than the position shown in the figure, failure may result.

   **Installation of i-see sensor corner panel**
   - Optional part PAC-SA1ME-E
   - Take CNY (white) and CNY (red), lead wires of the i-see sensor corner panel ① from the side of the electric box on the unit and make sure to connect them to the connector of the control board.
   - Lead wires of the i-see sensor corner panel ① should be fixed at the rib of the decorative panel with the plastic fastener ② so that there is no slack.
   - Lead wires should be held together with the lead wires of the unit and fixed with two of the plastic fastener ② so that there is no slack.
   - Put the cover back on the electric box with three screws.
   - Make sure wires are not caught in the cover of electric box. If they get caught, they will be cut off.
   - Adverse procedure of "Preparation before installing the decorative panel" in the Section 2 will be taken for installing the i-see sensor corner panels.
   - The i-see sensor corner panel should be fixed onto the decorative panel with screw.

4. **Verification**
   - For optional part PAC-SA1ME-E, check the rotating movement of the i-see sensor. If the i-see sensor does not rotate, review the procedure in "Installation of i-see sensor corner panel" in section 3.

   After verifying all the items above, hand all the documents including this manual and the manuals for the unit and separately sold parts to the user. Be sure to explain the descriptions of cleaning the filters and how to use the air intake grille updown function (remote controller operation) in the operation manual of the decorative panel to the user.

Air Outlet Shutter Panel PAC-SH51SP-E

--- Air-outlet shutter plate Installation Manual ---

1. Locate the Shutter Plate installation position
   - This is a part which is used to convert the number of air-outlet from "4 ways" to "3 ways" or "2 ways".
   - (Convert to "1 way" is not available.)
   - Select the outlet direction and decide the outlet to be closed (Indoor unit).
     ※ When the number of outlet is selected to "2 ways", be sure to explain to the customer that the filter should be cleaned once a month. (Otherwise, the filter will be clogged, and the performance of the cooling and heating can be lower.)
     ※ When the number of outlet is selected to "3 ways" or "2 ways", the operation noise can be larger.
     ※ Never to select "2 ways" in the environment of high temperature and high humidity. (It can cause dew.)

2. Installation of shutter plate (fig.1)
   - Install the shutter plate to the indoor unit so that it can fit the air-outlet concave portion.
     ※ Install one piece of shutter plate per one air-outlet.
     ※ The installation should be done before the decorative panel is installed.
     ※ The shutter plate must be installed not to cause wrinkles or gap. (It can cause dew drops.)
     ※ When attaching the duct flange to the blow outlet (marked *) between the refrigerant pipe and drain pipe, cut off the shutter plate at the slip portion of release paper, and then attach it.

3. Function selection
   - When the number of air-outlet is changed, it is necessary to make function selection.
     For the selection method, refer to the manual for installation of the indoor unit.

4. Setting of the auto vane (fig.2)
   - It is possible to fix the auto vane of the decorative panel to the totally closed position, which is applied to the air-outlet installed on the shutter plate.
     Once the auto vane is fixed, the operation of a remote control and all of automatic control will not work. Also, the LCD of the remote control will not work.

--- Checking for provided parts ---

Make sure that the parts shown on the right are in this bag, along with the instruction sheet.

--- Warning ---

1. Shut the main power (circuit breaker) off.
2. Disconnect a connector of the vane motor of the decorative panel which is applied the air-outlet installed on the shutter plate.
   - Disconnect the connector to arrow direction with keep depressing the lock release button as shown below.
   - Include the connector which was disconnected with an electric tape.

--- Caution ---

1. Do not totally close the vertical airflow controller of the air-outlet which is not equipped with the shutter plate.
   - The door or louver can be closed, and the air curtail with correctness.

--- Reference for passing ---

NOTICE
(1) When taking in external air, use the PAC-SH65OF-E duct flange (optional) and duct (to be procured at local site).
(2) It is available of fresh-air intake even when the High-efficiency filter element is installed.

(2) Follow the procedure in this manual for installation of the Multi-functional casement ① .
Otherwise, it is possible that installation of refrigerant tubes, drain tubes, and electrical wiring will not be available.

2 Installation of Indoor unit.
Follow the description in the installation manual which is attached to the indoor unit.

3 Installation of Multi-functional casement.

Preparation before installation
If it is necessary to change the number of air outlet, the optional parts Air Outlet Shutter Plate should be installed on the indoor unit. Therefore, the installation should be done before the Multi-functional casement ① is installed on the indoor unit.

The Multi-functional casement ① has four knockout on each side so that the air can be taken from any of four sides. Select any one or two sides in advance and make knockout holes on the Multi-functional casement ①.

Knockout hole position for fresh-air intake.

Making knockout holes
Remove the plate with heat insulating material
1/100mm (#3-15/16in.)

Be sure to use the PAC-SH65OF-E (optional) for duct flanges.
3 Installation of Multi-functional casement.

Wiring indoor unit

- Be sure to do the wiring (indoor/outdoor connection cables, remote control cable, etc.) before attaching the Multi-functional casement.
- Wiring after attaching the Multi-functional casement will be difficult.

Hand tightening

- Be sure to use two persons for this work.
- Fix the two screw with washer (black) ② to each position. (drain tube corner position and to its opposite angle).
- Hook the hole of the Multi-functional casement ① to the screw with washer (black) ② and hand tight.

Fixing

- Temporarily secure the two screws with washers ②, and also the other two screws with washers ②, and then tighten these screws with washers ② after making sure that the position of Multi-functional casement ① is correct.

Caution

- Tightening the screws without temporarily securing them could damage the screws with washers, or cause air leak.

Attaching bracket for securing decorative panel

- Use eight screws ③ to secure the four brackets for securing decorative panel ④ to each corner of Multi-functional casement ①. (See the figure below.)

Height adjustment

- It is recommended to make this adjustment before installation of duct when fresh air intake.
- Readjust the height of the Multi-functional casement ① with the gauge which is attached to the decorative panel as show right.

The gap must be in a range from 17mm(11/16in.) to 22mm(7/8in.). If out of range, it can cause malfunction.
4 Installation of duct (in case of fresh air intake)

Installation of duct flange

- Install the optional duct flange referring to the installation manual provided with it.

![Diagram of duct flange installation]

**Caution**

- Linkage of duct fan and air conditioner
  - In case that a duct fan is used, be sure to make it linked with the air conditioner when outside air is taken. Do not run the duct fan only. It can cause dew drop.

Details of air inlet (Example)

- 3-4 8mm (3-4\(\frac{1}{8}\)in.)
- 17-18mm (1\(\frac{1}{2}\)-\(\frac{3}{4}\)in.)
- Ceiling
- **\(\frac{1}{16}\)-\(\frac{1}{8}\)in.**

- 100mm (3\(\frac{1}{2}\)-3\(\frac{1}{4}\)in.)
- Screwed out hole
- Centers for 125mm (5\(\frac{1}{4}\)-\(\frac{1}{2}\)in.)
- Burring holes.

Installation of duct (should be prepared locally)

- Prepare a duct of which inner diameter fits into the outer diameter of the duct flange.
- In case that the environment above the ceiling is high temperature and high humidity, wrap the duct in a heat insulator to avoid causing dew drop on the wall.

5 Installation of Decorative panel

Preparation for installation

- Paste insulator A ⑤ and insulator B ⑥ on the Decorative panel as shown in the figure. See the installation manual provided with the Decorative panel for how to remove the corner panel, etc.

**Caution**

- Paste insulators on Decorative panel.
  - Be sure to paste on insulators A and B. Operation without pasting the insulators could cause dripping of water.

**<Non-design surface side>**

- Indoor unit refrigerant pipe
- Insulator A for Decorative panel
- Drain socket portion
- Paste insulator A ⑤ for Decorative panel overlapping over the pasted insulator.

**<Design surface side>**

- Indoor unit refrigerant pipe
- Insulator B for Decorative panel
- Drain socket portion
- Paste insulator B ⑥ for Decorative panel, aligning it with the shape of Decorative panel rib.
5 Installation of Decorative panel

Attaching Decorative panel

- Attach the Decorative panel, referring to the installation manual provided with the Decorative panel.
- Be sure to align the drain socket of Decorative panel with the drain pipe of indoor unit for attachment. Improper attachment could cause dripping of water.

- Connect the leads of Decorative panel and optional Signal receiver to the indoor unit through the bush of Multi-functional casement.

2. Attaching Duct Flange for External Air Input

1) Punch an opening for the duct flange.

2) Cut the slit of the #100 cut-out hole to which the duct flange is to be attached.

3) Cut out enough internal polystyrene foam to match the #100 hole. (Remove the cut powder completely.

4) Neglecting this could cause a fault.

5) When attaching to multi-functional casement:

6) Paste insulator on the duct flange (see the figure on the right).

7) Use three screws to attach duct flange (see the figure below).

8) When attaching to the indoor unit, be sure to remove the insulator that is pasted on the location of indoor unit (shown in the figure below).

9) When attaching to multi-functional casement, be sure to set the concave portion of duct flange toward the panel attachment surface when attaching it. (If the duct flange is attached to a location other than the specified one, the decoration panel cannot be attached.)

**How to Use / How to Install**

1. Checking Provided Parts
   ※Make sure that you have all the following parts before installation:

2. Duct Flange Installation Procedure
   1. Punch out the knockout opening for installing duct on indoor unit.
   2. Use the provided tapping screws ② to secure duct flange ①.

3. Duct Installation Procedure
   1. Securely fix the duct (with inner diameter 200 mm) procured at local site to the duct flange, using screws or band.

**Applicable Models**

- PCA-RP71HA
- PCA-RP125HA

</tr>
<tr>
<td>Shape</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

2. **Installing space panel**

   ● Install before installing decorative panel.
   ● This space panel is to be installed on decorative panel before installing on unit body.
   (If decorative panel has already been installed, remove it.)

   **Preparation for installation**

   ① Checking size of opening in ceiling
   ● Make sure that opening in ceiling is within the range shown below:
   860 × 860 ~ 910 × 910

   ② Positioning of ceiling surface and unit body
   ● Divide the provided gauge for installation ② into four parts, and insert it into the unit or outlet of Multi-functional cassette. Place the unit in the center of opening in ceiling, referring to the figure below.

   ● Using provided gauge for installation ②, position the ceiling surface and unit body.
   If position of ceiling surface and unit body does not match, it may result in leak of draft, drip of dewdrops and incorrect operation of horizontal vane of decorative panel, etc.

   **Setting the decorative panel and space panel**

   ● Place the space panel ① (two locations), matching the flange section of decorative panel, and assemble space panel ① on the decorative panel and then set them.
   ※ Be sure to assemble space panel ① on the decorative panel:
   If assembled incorrectly, space panel ① may break.

   **Installing on the unit body**

   ● The procedures are the same as those for decorative panel.
   Install the assembled set, referring to the installation manual for decorative panel.
Quick Clean Kit can be easily connected to a household vacuum cleaner for quick, convenient cleaning of the units*. It is highly recommended to wear rubber gloves when cleaning the heat exchanger. Touching the heat exchanger with the bare hands can cause injury.

Unit: mm
How to Use / How to Install

CLEANING USES

Front panel access models

The heat exchanger can be cleaned.

Quick-clean models

Example: Access to the fan is possible.

The fan can be cleaned.

CLEANING METHODS

Only available for the hose diameter of vacuum cleaner: 32 - 39 mm (inside diameter).

1. Before cleaning

Before cleaning the air conditioner, switch it off and turn off the breaker and/or remove the power supply plug to ensure safety.

2. Connection with a vacuum cleaner

- Insert the end of the connection hose into one of the special-made brushes.
- Use the special-made brush (large) for overall cleaning and the special-made brush (small) to access narrow spaces.
- While twisting the connection hose, insert it securely into the vacuum cleaner tube.
- Use the universal adapter if necessary.

2. Cleaning of the heat exchanger

- Let the heat exchanger dry completely before cleaning it.
  (If the heat exchanger is wet, you may not be able to vacuum up the dust.)
- Open the front panel and remove the air filter to expose the heat exchanger.
  Do not touch the heat exchanger directly with your bare hands; injury may result. Wear a pair of gloves to protect your hands.
- Clean the heat exchanger vertically, moving the brush along the fins of the heat exchanger. (The heat exchanger may be damaged if it is cleaned horizontally.)
  Use the special-made brush (small) to clean the hard to reach, narrow spaces such as the top and bottom of the heat exchanger.

3. Cleaning of the fan

- Remove the horizontal vane and swing out the vertical vane. Clean the fan horizontally, moving the brush along the blades of the fan.
  (Please refer to the operating instructions about the way to remove the horizontal vane and swing out the vertical vane.)

CAUTION:

- Some vacuum cleaners are equipped for overload protection devices, which might work if the airflow thought the vacuum cleaner hose is restricted. In that case, use them at the low power setting.
- If the special-made brushes become dirty, wash them with water and let them dry completely out of direct sunlight.
- When cleaning the air conditioner, do not stand on an unstable bench or chair. This may cause an injury, etc., if you fall down.
- Please refer to the operating instructions of the air conditioner for more details.
### Drain Pump for Wall Mounted models

* The items (B) – (F) are packed between main body and cover of the Drain Pump. Take them out after the cover removed.
How to Use / How to Install

1. Before installation of the Drain Pump

1-1 Set up of the Drain Pump

- Remove the cover and the mounting plate which is fixed on the back of the Drain Pump each.
  - The packaging material which is put between the cover and the main body of Drain Pump is only for cushion for transportation. Take it out as it is unnecessary.
  - Take out the accessories.
- Run the pull tight (F) attached through the square hole on the mounting plate.
- Cut the knock out hole on the cover with a nipper and etc.

* The screws removed will be used later. Keep them not to lose.

1-2 Set up and installation of the indoor unit

(1) Make the knock out hole for left side piping on the left side panel of the indoor unit.

(2) Pull out the drain cap from the left drain outlet.
  - Hold the convex section at the end and pull the drain cap.

(3) Remove the drain hose from the indoor unit.
  - Hold the end of the drain hose (a) (marked by the arrow) and pull the drain hose out (b).

(4) Insert the drain cap into the right drain outlet.
  - Insert a screwdriver or similar tool into the hole at the end of the cap and insert the cap fully into the outlet.

(5) Insert the accessory drain hose (C) into the left drain outlet.
  - Insert the hose up to the base of the drain pipe connection opening.
  - Make sure that the hook on the drain hose is securely caught on the projection in the opening in the drain pan.

(6) Install the indoor unit.

**CAUTION** The indoor unit must be installed horizontally. Otherwise, the water can leak and it will make the wall dirty.

2. Installation of the Drain Pump

2-1 Fixing of the mounting plate

- The installation place should be carefully considered if it is proper for installation. If it is not strong enough to hold the unit, make it stronger by using board or beam before installation.

(1) Decide the installation position of the mounting plate by using the paper pattern (G) attached.
  - The left end of the indoor unit should be marked in advance.
  1) Fix the paper pattern on the wall with the screw (B) (M4 × 16) attached with putting it to the left end of the indoor unit for positioning of the Drain Pump as shown in the drawing.
  2) Position the mounting plate with pushing it against the paper pattern.

(2) Fix the mounting plate with the screws (B) (M4 × 35) attached. Fix the mounting plate using the 5 dia. holes.
  (6 locations pointed by arrows in the drawing.)
  In case that the mounting plate is fixed by fixing bolts (through bolts, bolt anchors, or nut anchors), get M10 or W3/8 screws locally and put them into two ø 12 holes of the mounting plate to fix it.

(3) When the mounting plates is installed, remove the paper pattern.

(4) Check that the mounting plate is level and positioned correctly with the indoor unit. (Refer to Dimensions)
2-2 Installation of the Drain Pump

- Fix the Drain Pump on the mounting plate
  (1) Install the screws to the 2 upper holes (indicated by the arrows shown in right figure) of the mounting plate by hand tightening them about halfway, and then hook the Drain Pump on the screws.
  (2) Level the Drain Pump by using a spirit level. Then tighten the 4 screws securely to fix the Drain Pump.

 CAUTION The Drain Pump must be leveled. Otherwise, the water leaks and it makes wall dirty.

3. Installation of refrigerant piping (* See the item of refrigerant piping connection in the Installation of the indoor unit.)

(1) Install the refrigerant piping using the left piping method.
(2) When the refrigerant piping and drain pipe are routed vertically together, route the piping through the space in the mounting plate.
  - Be sure that the indoor unit must be positioned at the place where was marked at 2-1.
  - The bending radius of the refrigerant pipe must be R80 or less.
  - The tube raised should be fixed with the pull tight which was put through the square hole of the mounting plate.
  (3) Position the refrigerant piping in the left piping space of the indoor unit as shown in right figure.

4. Installation of drain piping

4-1 Connection of drain tube

(1) Connect the drain tube (C) which is installed to the left side drain port of the indoor unit to the drain port of the Drain Pump.
(2) Fix the connection port securely with the tube clip (E) attached.
(3) Connect the flexible drain tube, which is run from the top panel of the Drain Pump, to the local drain piping. The part connected must be closed by vinyl chloride type glue.
(4) Insulate the flexible drain tube which is run from top panel of Drain Pump with the drain tube cover (D) attached.

4-2 Installation of drain piping

(1) The drain pipe should be installed in accordance with the following procedure.
  - The drain pipe should be installed so that the outdoor side (drain side) becomes falling slope (1/100 or more) and do not make trap or peaks.
  - The horizontal run of the drain pipe should be 20 m or less. In case that the tube is crosscut sawing for long distance, some support brackets should be installed to prevent the pipe from being wavy. Never install the air bleeder. The drain will blow out.
  - The hard vinyl chloride pipe VP20 (outer dia. 26 mm) should be used for the drain pipe. And the part connected must be closed by vinyl chloride type glue to prevent water leak.
  - Be sure to wrap the drain pipe with adiabatic material (foam polyethylene: specific gravity 0.03, thickness 9 mm or more) available on the market.
  - Do not install stink trap to the outlet of the drain pipe.
  - The outlet of the drain pipe should be installed the place where it is not possible to cause stink.
  - In case that plural drain pipes are installed, install the main pipe so that it comes approximately 10 cm lower than the drain outlet and the pipes must be made of material of VP30 or similar and they should be falling slope (1/100 or more).
  - It is possible to raise the outlet of the drain pipe to 80 cm (max. lift) from bottom face of Drain Pump. However, if there is a horizontal run pipe connected to the vertical section of the drain pipe, water will overflow from the drain pan. This is because too much water will flow back when the operation stops. Therefore, the drain pipe must be raised vertically. Also, install the flow back stop at the highest point to prevent the water from flow back from horizontal part of the pipe. See the drawing below.

 CAUTION The Drain Pump must be leveled. Otherwise, the water leaks and it makes wall dirty.
5. Electric wiring

5-1 Set up of the indoor unit

(1) Remove the panel of indoor unit and the electric box cover. (* See the indoor unit installation section in the installation manual of the indoor unit.)

5-2 Electric wiring

- Route the wiring through the left piping space of the indoor unit to the electric box as shown in right figure.
- Connect the lead wires to the connectors of the indoor unit control board, and then place the slack in the wires in the wiring storage space of the Drain Pump. (Fix the lead wires with the clamps.)

5-3 Electric wiring operation

- Pull out the electric box as far as necessary to connect the lead wires to the control board connectors “CNP” and “CN4F”.
- Connect the lead wires with connectors to the control board connectors “CNP” and “CN4F”. At this time, remove the bypass connector (will be unused) from the terminal CN4F of the control board.
- Be sure not to have the lead wires touch the heat generator (heat sink) on the control board.

Note: □ stands for terminal connection. ◼ stands for connector joint.

6. Test run

- After the installation of the Drain Pump has been completed, make sure that the drain works correctly and the water does not leak from any part of connection.

(1) Pour water
Pour water approximately 800 cc to the drain pan. (* See the drain pipe [checking the drain flow] section in the installation manual of the indoor unit.)
(* If the water is poured too much, it is possible that the drainage does not work due to alarm stop by activation of drain over flow protection device.)

(2) Test run
In accordance with the procedure for test run in the installation manual for the indoor unit, operate the air cooling and make sure that the drainage works and the water does not leak.
* When the Drain Pump is installed in winter season, the water must be drained.
To drain water, remove the drain plug under the Drain Pump. Prepare the pan to receive drain.
When the drainage has been completed, put the drain plug back in place.

(3) After checking, put the cover back in place.
* Make sure that the left end of the indoor unit perfectly comes on the point marked at 2-1. (If they do not match, the cover will not be able to be installed or there will be a gap between the cover and the indoor unit.)

* The items (B) – (F) are packed between main body and cover of the Drain Pump. Take them out after the cover removed.
How to Use / How to Install

1. Before installation of the Drain Pump

1-1 Set up of the Drain Pump

- Remove the cover and the mounting plate which is fixed on the back of the Drain Pump each.
  * The packaging material which is put between the cover and the main body of Drain Pump is only for cushion for transportation. Take it out as it is unnecessary.
  * Take out the accessories.
- Run the pull tight (F) attached through the square hole on the mounting plate.
- Cut the knock out hole on the cover with a nipper and etc.

* The screws removed will be used later. Keep them not to lose.

1-2 Set up and installation of the indoor unit

(1) Make the knock out hole for left side piping on the left side panel of the indoor unit.

(2) Pull out the drain cap from the left drain outlet.
  - Hold the convex section at the end and pull the drain cap.

(3) Remove the drain hose from the indoor unit.
  - Hold the end of the drain hose (a) (marked by the arrow) and pull the drain hose out (b).

(4) Insert the drain cap into the right drain outlet.
  - Insert a screwdriver or similar tool into the hole at the end of the cap and insert the cap fully into the outlet.

(5) Insert the accessory drain hose (C) into the left drain outlet.
  - Insert the hose up to the base of the drain pipe connection opening.
  * Make sure that the hook on the drain hose is securely caught on the projection in the opening in the drain pan.

(6) Install the indoor unit.

CAUTION The indoor unit must be installed horizontally.
Otherwise, the water can leak and it will make the wall dirty.

2. Installation of the Drain Pump

2-1 Fixing of the mounting plate

- The installation place should be carefully considered if it is proper for installation. If it is not strong enough to hole the unit, make it stronger by using board or beam before installation.

(1) Decide the installation position of the mounting plate by using the paper pattern (G) attached.
  * The left end of the indoor unit should be marked in advance.
  1) Fix the paper pattern on the wall with the screw (B) (M4 × 16) attached with putting it to the left end of the indoor unit for positioning of the Drain Pump as shown in the drawing.
  2) Position the mounting plate with pushing it against the paper pattern.

(2) Fix the mounting plate with the screws (B) (M4 × 35) attached. Fix the mounting plate using the 5 dia. holes.
  (6 locations pointed by arrows in the drawing.)
  In case that the mounting plate is fixed by fixing bolts (through bolts, bolt anchors, or nut anchors), get M10 or W3/8 screws locally and put them into two ø 12 holes of the mounting plate to fix it.

(3) When the mounting plates is installed, remove the paper pattern.

(4) Check that the mounting plate is level and positioned correctly with the indoor unit. (Refer to Dimensions)
2-2 Installation of the Drain Pump

- Fix the Drain Pump on the mounting plate.
  (1) Install the screws to the 2 upper holes (indicated by the arrows shown in right figure) of the mounting plate by hand tightening them about halfway, and then hook the Drain Pump on the screws.
  (2) Level the Drain Pump by using a spirit level. Then tighten the 4 screws securely to fix the Drain Pump.

CAUTION
The Drain Pump must be leveled.
Otherwise, the water leaks and it makes wall dirty.

3. Installation of refrigerant piping (* See the item of refrigerant piping connection in the Installation of the indoor unit.)

(1) Install the refrigerant piping using the left piping method.
(2) When the refrigerant piping and drain pipe are routed vertically together, route the piping through the space in the mounting plate.
- Be sure that the indoor unit must be positioned at the place where was marked at 4-1.
- The bending radius of the refrigerant pipe must be R80 or less.
- The tube raised should be fixed with the pull tight which was put through the square hole of the mounting plate.
(3) Position the refrigerant piping in the left piping space of the indoor unit as shown in right figure.

4. Installation of drain piping

4-1 Connection of drain tube

(1) Connect the drain tube (C) which is installed to the left side drain port of the indoor unit to the drain port of the Drain Pump.
(2) Fix the connection port securely with the tube clip (E) attached.
(3) Connect the flexible drain tube, which is run from the top panel of the Drain Pump, to the local drain piping. The part connected must be closed by vinyl chloride type glue.
(4) Insulate the flexible drain tube which is run from top panel of Drain Pump with the drain tube cover (D) attached.

4-2 Installation of drain piping

(1) The drain pipe should be installed in accordance with the following procedure.
- The drain pipe should be installed so that the outdoor side (drain side) becomes falling slope (1/100 or more) and do not make trap or peaks.
- The horizontal run of the drain pipe should be 20 m or less. In case that the tube is horizontally run for long distance, some support brackets should be installed to prevent the pipe from being wavy. Never install the air bleeder. The drain will blow out.
- The hard vinyl chloride pipe VP20 (outer dia. 26 mm) should be used for the drain pipe. And the part connected must be closed by vinyl chloride type glue to prevent water leak.
- Be sure to wrap the drain pipe with adiabatic material (foam polyethylene: specific gravity 0.03, thickness 9 mm or more) available on the market.
- Do not install stink trap to the outlet of the drain pipe.
- The outlet of the drain pipe must be installed the place where it is not possible to cause stink.
- In case that plural drain pipes are installed, install the main pipe so that it comes approximately 10 cm lower than the drain outlet and the pipes must be made of material of VP30 or similar and they should be falling slope (1/100 or more).
- It is possible to raise the outlet of the drain pipe to 80 cm (max. lift) from bottom face of Drain Pump. However, if there is a horizontal run pipe connected to the vertical section of the drain pipe, water will overflow from the drain pan. This is because too much water will flow back when the operation stops. Therefore, the drain pipe must be raised vertically. Also, install the flow back stop at the highest point to prevent the water from flow back from horizontal part of the pipe. See the drawing below.

CAUTION
The Drain Pump must be leveled.
Otherwise, the water leaks and it makes wall dirty.

5. Electric wiring

5-1 Set up of the indoor unit

(1) Remove the panel of indoor unit and the electric box cover. (* See the indoor unit installation section in the installation manual of the indoor unit.)

5-2 Electric wiring

- Route the wiring through the left piping space of the indoor unit to the electric box as shown in right figure.
- Connect the lead wires to the connectors of the indoor unit control board, and then place the slack in the wires in the wiring storage space of the Drain Pump. (Fix the lead wires with the clamps.)

5-3 Electric wiring operation

- Pull out the electric box as far as necessary to connect the lead wires to the control board connectors “CNP” and “CN4F”.
- Connect the lead wires with connectors to the control board connectors “CNP” and “CN4F”. At this time, remove the bypass connector (will be unused) from the terminal CN4F of the control board.
- Be sure not to have the lead wires touch the heat generator (heat sink) on the control board.

Note: ■ stands for terminal connection. ● stands for connector joint.

6. Test run

- After the installation of the Drain Pump has been completed, make sure that the drain works correctly and the water does not leak from any part of connection.

(1) Pour water

Pour water approximately 800 cc to the drain pan. (* See the drain pipe [checking the drain flow] section in the installation manual of the indoor unit.)

(* If the water is poured too much, it is possible that the drainage does not work due to alarm stop by activation of drain over flow protection device.)

(2) Test run

In accordance with the procedure for test run in the installation manual for the indoor unit, operate the air cooling and make sure that the drainage works and the water does not leak.

* When the Drain Pump is installed in winter season, the water must be drained.

To drain water, remove the drain plug under the Drain Pump. Prepare the pan to receive drain.

When the drainage has been completed, put the drain plug back in place.

(3) After checking, put the cover back in place.

* Make sure that the left end of the indoor unit perfectly comes on the point marked at 2-1. (If they do not match, the cover will not be able to be installed or there will be a gap between the cover and the indoor unit.)
Drain Pump for Ceiling Suspended models

PAC-SH83/84/85DM-E

Photo

Descriptions

Raises drain generated during unit’s operation to secure the appropriate angle of the drain pipe.

Specifications

- **Rated power**: 220V AC, single-phase, 50/60Hz
- **Power consumption**: 12/10.8W
- **Operating current**: 0.114/0.092A
- **Drain lift**: Max. 600mm from indoor unit’s top surface
- **Discharge rate**: 24 l/h or more
- **Driving motor**: Shading type (Class E insulation)
- **Drain piping**: Connected to drain outlet. PVC pipe VP-20 (O.D.Φ26) can be used.

2. **Installation Diagram of the Drain lift up mechanism**

   - This drain lift up mechanism must be installed inside an indoor unit.
   - Installing this drain lift up mechanism limits to arrange the refrigerant pipe only upward.
   - To facilitate installation of the drain lift up mechanism, it should be installed before indoor unit.
   - The size of the plumbing that must connect to the refrigerant kind of the indoor unit that corresponds in the case of PAC-SH85DM-E, changes.
   - Please refer to the installation manual of an indoor unit for details.
   - The L-shaped pipes there are bringing are corresponding to either refrigerant plumbing.

*1 In case of accessory parts VP-20pipe ⑤ and pipe cover ⑤ do not have enough length because the lifting height is high, please supply locally.

### Viewed from the Front

- L-shaped pipe ⑨ (gas pipe)
- Drainage outlet ①
- Drainage plug ⑨
- Drain connecting connecting hole ①
- Fixing screw ⑨

### Positions of Holes on the Ceiling

- Rear side of the indoor unit ⑨
- Right side of the indoor unit ⑨
- Knockout hole on the indoor unit ⑨
- Ceiling hole (2-φ100) ⑨
### 3 Installing the Drain lift up mechanism

1. Remove the intake grille and side panel. (Refer to the indoor unit installation manual.)
2. Prepare the knockout hole to be used for the upper piping of the indoor unit.
3. Fix the attachment with the fixing screws (×2)
4. Fix the drain lift up mechanism with the fixing screws (×4)

### 4 Refrigerant Piping

*For details on piping, refer to the installation manual of the indoor unit.

[With the stop valve of the outdoor unit fully closed]

1. Apply lubricant to the flare sheet of the L-shaped pipes (gas pipe, liquid pipe) (×2).
2. Remove the flare nut and cap from the indoor unit.
3. Apply lubricant to the flare sheet connecting section of the indoor unit.
4. Connect the L-shaped pipes (gas pipe, liquid pipes) and quickly.
5. Fit the removed flare nut to the existing pipes and carry out flaring.
6. Connect the L-shaped pipes with the existing pipes in the same way.
7. Cover each connection with heat insulator (×4).

[AFTER THE REFRIGERANT CIRCUIT IS COMPLETE]

8. Vacuumize the refrigerant lines through the service port of the liquid stop valve.
9. Fully open the stop valves (both liquid and gas).

* The method for operating the stop valve is described on the outdoor unit installation manual.

- Apply the ester-oil or ether-oil or alkylbenzene (locally supplied)
- Use the flare nut which has been removed from the indoor unit.

Wrap this part with the insulator that comes with the indoor unit.

- Insulator A, B (×1)
- Cover this part with insulator A (×1) and then cover it over with insulator B (×1)
5 Drain Piping

*For details on piping, refer to the installation manual of the indoor unit.
1. Apply vinyl chloride type adhesive to the drainage outlet of the drain lift up mechanism ①, then insert the VP-20 pipe ④ into it. (30mm deep)
2. Connect the VP20 pipe ④ and existing drain pipe using a 90-degree elbow etc. and adhesive.
3. Cover the VP-20 pipe ④ with the pipe cover ⑤.
4. Apply vinyl chloride type adhesive to the drain lift up mechanism ① and drain connecting hole on the indoor unit, then insert the flexible hose ⑥ into them. Take care that the hose does not twist.

*Insulate all pipes, from the drain lift up mechanism up to the outside.

**In case of accessory parts VP-20 pipe ④ and pipe cover ⑤ do not have enough length because the lifting height is high, please purchase procure supply locally.

Viewed from the Right

[Make sure to follow the following points during drain piping.]
* Drain lifting height must be less than 600mm.
* Incline the drain pipe downwards (1/100 or more) to the drainage side (outdoor).
* Do not create traps or peaks.
* Keep the horizontal piping within 20m. Use fixtures to prevent the pipe from waving.
* Do not install air vent pipes. The drainage may spout out.
* Use general-purpose hard vinyl chloride pipes (outer diameter: 26) and apply vinyl chloride type adhesive to prevent any leakage.
* Cover with insulator (made of foamed polyethylene, with specific gravity of 0.03 thickness of 9mm or more).
* Do not install odor trap at the drain outlet.
* Locate the end of pipe at a point where odor is unlikely to occur.
* Do not insert the pipe directly into a drainage ditch where sulfur gas may be produced.
* Use VP-30 pipes for centralized piping. Install the centralized drain pipe approximately 10cm below the output of pipes connected from the drain lift up mechanism.

[Example of centralized piping]
6 Electric Wiring

*Refer to the installation manual of the indoor unit together with this manual.
*Perform the work after checking that the power supply is off.
1. Remove the beam.
2. Remove the electric parts cover.
3. Pull the electric parts box downwards.
4. Connect the lead wire of drain lift up mechanism to the CNP and CN4F connectors provided on the control PCB of the indoor unit.
5. Tie up the lead wires with the fastener so that the wires do not come apart inside the electric parts box.
6. When the wiring is finished, re-install the electric parts box, its cover and the beam.

---

- **Electric parts box**
- **Beam**
- **Drain lift up mechanism**
- **Electric parts cover**
- **Lead wire of the drain lift up mechanism**
- **Fix with the clamp located on upper right of the electric parts box.**
- **Fix the lead wire**
- **Tie up with existing lead wire Fastener**
- **After the box is re-installed, secure the excess part of the lead wire with the clamp located on the right of the electric parts box.**
- **CNP(pump)**
- **Connect to the blue connector.**
- **CN4F (float switch)**
- **Connect to the white connector.**
- *** A jumper connector is used in place of CN4F at the time of shipment, so replace it with CN4F.**

* The positions of the connectors which must be connected to the control PCB in certain models differ from those specified in the above diagram. Make sure that the lead wire are connected to CNP and CN4F connectors.
Test Run

1. Supplying water
   Supply approximately 1000cc of water to the air outlet.

2. Carrying out a test run
   (1) Turn the power ON.
   (2) Press the TEST RUN button on the remote controller twice.
   (3) Press the MODE button to select cooling mode.
      *The drain lift up mechanism will be activated to start discharging the water.
   (4) Check whether water is discharged properly.
   (5) Press the POWER ON/OFF button to cancel the test run.
   (6) Turn the power OFF.

3. Re-install each part after checking.
   *If the drain lift up mechanism is installed at the time of the year when heating is used, make sure that the water for the drain check has been removed.
   After removal of the water, reinstall the drainage plug.

E-54
1 Installing the Drain Pump

1-1 Installing the Drain Pump

1) Unscrew the (a)screw on the unit cover, hook the ②ATTACHMENT over the mounting bracket on the unit, and screw it on to the unit with the (a)screw. (Fig. 1)

2) Temporarily screw in the ②SCREW in the hole (b) on the ②ATTACHMENT. (Fig. 1 and 2)

3) Loosen the drain-pump-cover fixing screws, and remove the cover. (Fig. 3)

4) Hang the ①DRAIN PUMP on the ②ATTACHMENT by placing the ②SCREW (the one screwed in during Step (2) above) through the Figure-8 hole on back of the ①DRAIN PUMP, and then tighten the ②SCREW from inside the ①DRAIN PUMP. (Fig. 4)
1-2 Installing DRAIN HOSE 1

(1) Connect each end of DRAIN HOSE 1 to the drain port on the unit and on the drain pump. (Fig. 5)
   ※ Insert the hose all the way to the end of the ports.
   ※ Do not use any adhesive.

(2) Secure the hose with HOSE BANDs at both ends of the hose. (Fig. 5)

(3) Attach PIPE COVER 1 and PIPE COVER 2 to DRAIN HOSE 1 flush against each other and against the unit and the drain pump, and then secure them in place with BANDs. Wrap the pipe cover connection with vinyl tape to close the gap. (Fig. 6)

1-3 Wiring connections

(1) Remove the CONTROL BOX COVER from the unit by unscrewing the two screws on the cover. (Fig. 7)

(2) Unscrew the (c)CONTROL BOX fixing screw. (Fig. 7)
(3) Remove the short-circuit connector from CN4F on the control board (white, 4P). (Fig. 8)

(4) Route the two drain pump wires behind the CONTROL BOX and into the CONTROL BOX. Lift the CONTROL BOX in the direction of the arrow (d) to allow the wires through. (Fig. 8) ※ Do not pinch the wires.

(5) Wind the drain pump wire (connector: blue, 3P) around ③FERRITE CLAMP once, and fix it in place with ③BAND. (Fig. 9)

(6) Connect the drain pump wire (connector: blue, 3P) to CNP on the control board, and connect the float switch wire (white: 4P) to CN4F on the control board respectively. (Fig. 8)

(7) Place the screw(c) that was removed in Step 3-3.(2) above back on. (Fig. 7)

(8) Fix the two drain pump wires with ①CLAMPs to the unit. (Fig. 10)
2 | Drain piping work

- Ensure that the drain piping is downward (pitch of more than 1/100) to the outdoor (discharge) side. Do not provide any trap or irregularity on the way.
- Ensure that any cross-wise drain piping is less than 20 m (excluding the difference of elevation). If the drain piping is long, provide metal braces to prevent it from waving. Never provide any air vent pipe. Otherwise drain may be ejected.
- Use a hard vinyl chloride pipe O.D. ø 32 for drain piping.
- Ensure that collected pipes are 10 cm lower than the unit body's drain port.
- Do not provide any odor trap at the drain discharge port.
- Put the end of the drain piping in a position where no odor is generated.
- Do not put the end of the drain piping in any drain where ionic gases are generated.

2-1. Insert the ① DRAIN HOSE 2 into the drain port (insertion margin: 25mm).
(The drain hose must not be bent more than 45° to prevent the hose from breaking or clogging.)
(Attach the hose with glue for the hard vinyl chloride pipe, and fix it with the ③BAND 2.)

2-2. Attach the drain pipe (O.D. ø 32 PVC TUBE, field supply).
(Attach the pipe with glue for the hard vinyl chloride pipe, and fix it with the ③BAND 2.)

2-3. Perform insulation work on the drain pipe (O.D. ø 32 PVC TUBE) and on the socket (including elbow).

2-4. Check the drainage.

2-5. Attach the ③ PIPE COVER 3 and, fix it with the ③BAND 2 to insulate the drain port.
3  Confirming drain discharge

Make sure that the drain-up mechanism operates normally for discharge and that there is no water leakage from the connections.

- Be sure to confirm the above in a period of heating operation.
- Be sure to confirm the above before ceiling work is done in the case of a new construction.
- Make sure that water is not leaking from the connection (e) on the drain pump shown in the right figure.

3-1. Fill water into the feed water pump using a feed water tank. In filling, be sure to put the end of the pump or tank in a drain pan. (If the insertion is incomplete, water may flow over the machine.)

※ Do not splash water on the drain pump coil or the float switch wire through hole when pouring water.

3-2. Perform the test run in cooling mode, or turn on the switch SWE on the controller circuit board. (The drain pump and the fan are forced to operate without any remote controller operation.) Make sure using a transparent hose that drain is discharged.

3-3. After confirmation, cancel the test run mode, and turn off the main power. When the switch SWE has been turned on, turn it off, and attach the CONTROL BOX COVER and the DRAIN PUMP COVER in the original positions.

---

A  Insert pump's end 2 to 4 cm.
B  About 2000 cc
C  Water
D  Do not splash water on the drain pump coil or the float switch wire through hole when pouring water.
A decoration cover to be attached to the upper section of ceiling suspended models. Possible to prevent dust accumulation.

How to Use / How to Install

1. Checking Provided Parts

- Make sure that you have all the following parts before installation:
  - Front cover
  - Suspending bracket covers
  - Tapping screws (4 x 10)
  - Washers

2. Front Cover Installation Procedure

- The following procedure shows how to attach the front cover after installing the air-conditioner.
  1. Loosen the nuts of bolts suspending the unit, and lower the unit by approx. 5 mm.
     - When lowering the unit, be careful not to damage the wires, coolant pipe or drain pipe.
  2. Remove the screws that secure the front panel and top panel to the unit (at 4 points).
     - (The provided tapping screws are spares for these screws.)
  3. Put front cover over the unit.
     - Be careful not to damage the insulation sheets pasted on the top surface of unit and the inside of front cover.
  4. Use the screws removed in step 2 to temporarily secure front cover.
     - (Do not tighten the screws at this time.)
  5. Tighten the nuts of bolts suspending the unit, and fit the unit onto ceiling.
     - Tighten the nuts while carefully watching the attached status of front cover.
  6. Tighten the screws that were temporarily secured in step 4.
     - Make sure that the unit is correctly installed, and then tighten the nuts of bolts suspending the unit.
     - [CAUTION] Do not tighten the lower double nuts yet, because installing suspending bracket covers must now be done.

- If you attach the front cover before installing the unit, perform the procedure in steps 2 and 3, and then fully tighten the 2 screws on each side (4 in total).

3. Suspending Bracket Installation Procedure

- Attach the suspending bracket covers in succession.
  1. Remove the lower double nuts (from 4 points) from the suspending bolts.
  2. Put the provided washers (tops and bottoms of suspending bracket covers) and suspending bracket covers through suspending bolts.
  3. Tighten the nuts removed in step 1 for the suspending bolts.
     - Make sure that the suspending bracket covers are in close contact with the unit and ceiling.

- Also refer to the installation manual of indoor unit.

4. Test Run

- Make sure that test run is performed without any abnormal sound, such as vibrations, fluttering sound, etc.

- [Test Run Procedure]
  1. Turn power on.
  2. Press the TEST RUN button on remote controller twice.
  3. Press the MODE button on remote controller to set to the fan mode.
     - The fan will rotate to blow out air.
  4. Make sure that no abnormal sound, such as vibrations, fluttering sound, etc. is heard.
  5. Press the ON/OFF button on remote controller to release test run.
  6. Turn power off.
A decoration cover to be attached to the upper section of ceiling suspended models. Possible to prevent dust accumulation.

How to Use / How to Install

1. Checking Provided Parts
   (Make sure that you have all the following parts before installation):
   1. Front cover
   2. Suspending bracket covers
   3. Tapping screws (4x10)
   4. Washers

2. Front Cover Installation Procedure
   - The following procedure shows how to attach the front cover after installing air-conditioner.
   1. Loosen the nuts of bolts suspending the unit, and lower the unit by approx. 5 mm.
      - When lowering the unit, be careful not to damage the wires, coolant pipe or drain pipe.
   2. Remove the screws that secure the front panel and top panel to the unit (at 4 points).
      - (The provided tapping screws are spares for these screws.)
   3. Put front cover over the unit.
      - Be careful not to damage the insulation sheets pasted on the top surface of unit and the inside of front cover.
   4. Use the screws removed in step 2 to temporarily secure front cover.
      - (Do not tighten the screws at this time.)
   5. Tighten the nuts of bolts suspending the unit, and fit the unit onto ceiling.
      - Tighten the nuts while carefully watching the attached status of front cover.
   6. Use the screws removed in step 2 to temporarily secure front cover.
      - (Do not tighten the screws at this time.)
   7. Tighten the nuts while carefully watching the attached status of front cover.
   8. Separate the unit from ceiling to leave a gap of 2-3 mm from ceiling.
      - Be sure to provide this space: If the unit is in contact with ceiling, the vibrations could be transmitted to ceiling.

3. Suspending Bracket Installation Procedure
   - Attach the suspending bracket covers in succession.
   1. Remove the lower double nuts (from 4 points) from the suspending bolts.
   2. Put the provided washers (tops and bottoms of suspending bracket covers) and suspending bracket covers through suspending bolts.
   3. Tighten the nuts removed in step 1 for the suspending bolts.
      - Make sure that the suspending bracket covers are in close contact with the unit and ceiling.

4. Test Run
   - Also refer to the installation manual of indoor unit.
   - Make sure that test run is performed without any abnormal sound, such as vibrations, fluttering sound, etc.
   1. Turn power on.
   2. Press the TEST RUN button on remote controller twice.
   3. Press the MODE button on remote controller to set to the fan mode.
      - The fan will rotate to blow out air.
   4. Make sure that no abnormal sound, such as vibrations, fluttering sound, etc. is heard.
   5. Press the ON/OFF button on remote controller to release test run.
   6. Turn power off.
Enables to control multiple air conditioners from a (remote) location by connecting the On/Off contact point. It can also control the operation of the relay with error signals by connecting the MA remote controller PAR-21MAA.

**Applicable Models**
- MSZ-FD25/35/50VA(S)
- MSZ-GE22/25/35/42/50VA
- MSZ-GA60/71VA
- MFZ-KA25/35/50VA
- MLZ-KA25/35/50VA
- SEZ-KA
- SLZ-KA
- SEZ-KD
- P-series: In the case the outdoor unit is SUZ or MXZ, the indoor of P-series can be connected.

**Specifications**
- **Power**: 12V DC (supplied from indoor unit)
- **Operating conditions**: Indoor only (ambient temperature: 0 to 40°C, no condensation)
- **Connection of centralized controller**:
  - Communication cable: 3-wire (recommended: microphone cord (MVVS) 0.3mm²)
  - Communication cable distance: Max. 100m
- **Connection of MA smooth remote controller / MA deluxe remote controller**:
  - Communication cable: 2-wire (recommended: optional PAC remote controller cable PAC-YT81HC)
  - Communication cable distance: Max. 10m
- **Indoor unit connecting cable**: Dedicated 5-wire cable
- **Weight**: 300g (including indoor unit connecting cable)

**Dimensions**

Unit: mm
How to Use / How to Install

1. Before Installation

1.1. How to Use the MA & CONTACT TERMINAL Interface

Functions

Centralized control (Fig. 2-1)
You can turn multiple air conditioners on and off from one location. (MAC-821SC-E (8-Room))

Use as wired remote controller (Fig. 2-2)
You can use the MA remote controller as a wired remote controller. (PAR-21MAA)

Remote control (Fig. 2-3)
You can turn on and off an air conditioner from a remote location by connecting the ON/OFF contact point.

Status indicator output (Fig. 2-4)
You can control the operation of the relay with either of the on/off or error/ok status output signals.

Sample System Configuration

Fig. 2-1

2. Connecting the MA & CONTACT TERMINAL Interface to Indoor Unit

- Connect the interface unit and the indoor control board using the connecting cable that came with the interface.
- Extending or shortening the connecting cable that comes out of the interface may cause it to malfunction. Also, keep the connecting cable as far as possible away from the electrical wires and ground wire. Do not bundle them together.

**M series**

![Diagram of M series connection]

Connect the connecting cable that comes with the interface unit to the connector CN105 on the indoor control board.

**P/S series**

![Diagram of P/S series connection]

Connect the connecting cable that comes with the interface unit to the connector CN92/CN105 on the indoor control board.

- When this interface unit is connected with indoor unit, timer operation cannot be set from a wireless remote controller.
3. Connecting the MA & CONTACT TERMINAL Interface with each system

(For details on each system, see the relevant instruction manual.)

- Screw the mounting cord clamp (5)-(7) according to the thickness of the connecting cable used for each system. Fasten the cable tie (11) as shown in the figure to prevent undesirable movement of the connecting cable.

- The cables connected to the indoor unit should be mounted on or near the indoor unit.

- If the connecting cable is not securely mounted, the connector may detach, break, or malfunction.

(1) Attach a mounting cord clamp (5)-(6) provided with the parts prepared at the installation site to the thick part of the connecting cable, and fix it with a screw 4 × 10 (9).

(2) If there is excess thin part of the connecting cable, lay it out using hooks as shown in the figure. The thin part of the cable should be secured above the dotted line indicated in the figure.

(3) Close the cover of the indoor control P.C. board. Reinstall the front panel and the lower right corner box.

- Set the interface dip switch (SW500–502) settings before turning on the power.
- If the interface dip switch (SW500–502) settings are not set correctly, the system will not function properly.

3.1. Centralized Control (When Connecting to a Centralized on-off remote Controller)

* Refer to the installation manual of centralized on-off remote controller.

Dip switch settings

**SW500**

<table>
<thead>
<tr>

<td>1</td>
<td>2</td>
<td>3</td>
<td>4</td>
<td>5</td>
<td>6</td>
<td>7</td>
<td>8</td>
</tr>
</tbody>
</table>

Setting required

**SW501** and **SW502** do not have to be set.
3.2. Use as a Wired Remote Controller (Using the MA Remote controller)

**Note:**

1. Be sure to set the “Auto Heating/Cooling Display Setting” of the MA remote controller OFF before use. When the setting is turned ON, the remote controller display may differ from the actual operating status of the unit.
   - For details on the “Auto Heating/Cooling Display Setting,” refer to the MA remote controller instruction manual.
2. A test run cannot be initiated using the test run switch on the MA remote controller.
3. The horizontal vanes on the unit cannot be operated using the louver switch.
4. The range of room temperature indication is between 10°C and 38°C.

**Dip switch settings**

- **SW500** does not have to be set.

- **SW501:**
  
  **SW501- No. 1-4: Refrigerant address**
  - Set this switch when multiple indoor units (and interfaces) are connected to a single MA remote controller.
  - Always start the refrigerant address at "0".
  - Even when connecting multiple outdoor units, set a different refrigerant address for each indoor unit.

- **SW501- No. 5-6**
  
  - **M series**
  
  No. 5 and 6 should normally be set to OFF.
  
  Under the following conditions, however, they should be switched to ON.

  Only turn this ON when the indoor units in the same group include models where the MA remote controller and indoor unit are directly connected.

  Set them to ON only when using the room temperature sensor installed in the MA remote controller.
  
  * This can be switched when an accurate room temperature cannot be detected by the air conditioner unit.
  
  MSZ-GA Series models cannot use a room temperature sensor on their MA remote controllers.
  
  (Some M series models will not allow the use of the MA remote controller room temperature sensor.)

---

**MA & Contact Terminal Interface MAC-397IF-E**

---

E-68

MITSUBISHI ELECTRIC CORPORATION
SW502:
- Set this switch based on the functions of the indoor unit connected to the interface.
- See the table of "Air conditioner Function Settings" for SW502 and set the switch after checking the functions using the wireless remote control that came with the indoor unit.

3.3. Remote Control (Turning Indoor Unit On and Off from the Contact Point)

- You can turn indoor unit on and off using an on/off switch like a light switch.
- Connect the supplied lead wires (6) (16) to the connector CN591 on the interface board.
- Wire the remote control components, including the switches, at the installation site.
- Please use extension cords with reinforced insulation.

When the switch contact point is closed (ON), the air conditioner will turn on, and when the switch contact point is open (OFF), the air conditioner will turn off.

* When connecting the connector and the lead wire, connect them using a closed end connector as shown below.

Dip switch settings

- SW500

- SW501 and SW502 do not have to be set.
3.4. Restricting Indoor Unit Operations from the Contact Point

- You can use a coin timer or light switch to ensure that indoor unit will not operate.
- Connect the supplied lead wires (6) (16) to the connector CN591 on the interface board.
- Wire the remote control components, including the coin timers or switches, at the installation site.
- Please use extension cords with reinforced insulation.

![Diagram of Indoor unit, Interface unit (1), Interface unit (C), Coin timer (C), Lead wires (6) (16)]

* When the contact point is open, the unit will turn off and will not be operable from the remote control. When the contact point is closed, the unit will turn on and will be operable from the remote control.

Dip switch settings

■ SW500

![Dip switch settings diagram]

■ SW501 and SW502 do not have to be set.

3.5. Status Signal Output Using the Relay

- You can set the external relay to ON/OFF based on whether the indoor unit is set to either on/off or error/ok.
- Set up and wire the relay and extension cables at the installation site.
- Please use relays with reinforced insulation.

![Diagram of Indoor unit, Interface unit (C), Relay (B), Extension cord (A)]

* When the contact point is open, the unit will turn off and will not be operable from the remote control.
Dip switch settings

### SW500

1. When outputting the indoor unit ON/OFF

   - The relay is ON when the unit is running, and OFF when it is not.

   ![Dip Switch Diagram]

   Setting required

2. When outputting the indoor unit ERROR/OK

   - The relay is ON when an error has occurred, and OFF when the unit is functioning properly.

   ![Dip Switch Diagram]

   Setting required

- **SW501** and **SW502** do not have to be set.

<tr>
<td>LED523</td>
<td>Device is not communicating properly with the MA remote controller.</td>
<td>–</td>
<td>Blinking at approx. 8 second intervals: Device is communicating normally with the MA remote controller.</td>
</tr>
</tbody>
</table>

* Use the table above to check the device operations.
6. Mounting the MA & CONTACT TERMINAL Interface Unit

When mounting the interface to the back-side dent of MFZ-KA model, be sure to apply insulation material to prevent condensation from forming.
The Interface unit should be placed in a location where the connecting cable from the interface can reach an indoor unit.
The device will not function properly if the connecting cable is extended so the connecting cable should not be extended.
Mount the interface unit securely to a pillar or wall using 2 or more screws.

■ When Using Wall Mounting Brackets (2)

1. Attach the wall mounting brackets (2) to the interface unit (1) using 2 mounting screws (3).

![Interface unit (1) mounting screws]

2. Mount the unit to a pillar or wall using 2 mounting screws (3).

![Mounting screws (3)]

■ When Mounting Directly to a Wall

Mount the interface unit (1) case to the wall using the mounting screws (3).

![Interface unit (1) mounting screws]

* When mounting the interface unit (1) using a cushioning material (4), be sure to mount it in a location where it will not fall.

![Cushioning material (4)]

* If there is any slack in the connecting cable, use a fastener (12) to keep it in place.

[Diagram showing dimensions]
1. Before Installation

1.1. How to Use the M-NET Interface

**Caution**

When using a packaged air conditioner (city-multi) system remote controller, you cannot register packaged air conditioners and room air conditioners in the same group. In this case, register the Package and room air conditioner in different groups.

**Functions**

Centralized and individual management of M/P/S series using M-NET(*).

* A type of packaged air conditioner control (city-multi)

**Related Products Sold Separately**

- ME Remote Controller PAR-F27MEA
- Centralized Controller G-50A
- System Remote Controller PAC-SF44SRA
- ON/OFF Remote Controller PAC-YT40ANRA
- Schedule Timer (M-NET) PAC-YT34STA
- Power supply unit PAC-SC50KUA

**Sample of System Configuration (only M/S series outdoor-unit)**

Sample configuration of a system using a centralized controller

![Diagram of system configuration](image)

- The number of units that can be connected to the centralized controller (G-50A) is max. 50, including packaged and room air conditioners. The wiring from the M-NET Interface to the centralized controller can have a maximum length of 500 m. The wiring from the M-NET Interface to the ME Remote Controller can have a maximum length of 10 m.
- For details, see the MELANS Catalog and the instruction manuals for the Centralized Controller and ME Remote Controller.

1.2. Accessory

Before installing the device, make sure you have all the necessary parts.

**Accessory**

<table>

**Items to Prepare at the Installation Site**

- Connection wiring (centralized controller)
- Shield wiring CVVS/CPEVS
- Connection wiring (for connecting the ME Remote Controller)
- Remote control wires (2-core sheath wire 0.3 mm²)
- Related parts sold separately
- Prepare the necessary number of parts sold separately as needed for your system.

* CPEVS; PE insulated PVC jacketed shielded communication cable
* CVVS; PVC insulated PVC jacketed shielded control cable
* PE; Polyethylene  PVC; Polyvinyl chloride
2. Mounting the M-NET Interface Unit

The M-NET Interface unit should be placed in a location where the 5-core connecting cable from the interface can reach an indoor unit. Do not extend the 5-core connecting cable. This will cause the device to malfunction. Mount the interface unit securely to a pillar or wall using 2 or more screws.

■ When Using Wall Mounting Brackets 2

1. Attach the wall mounting brackets 2 to the interface unit using 2 mounting screws 3.

   ![Diagram of wall mounting brackets and screws](image)

   - Interface unit 1
   - Wall mounting brackets 2
   - Mounting screws 3

2. Mount the unit to a pillar or wall using 2 mounting screws 3.

   ![Diagram of wall mounting screws](image)

   - Mounting screws 3

■ When Mounting Directly to a Wall

Mount the interface unit 1 case to the wall using the mounting screws 3.

   ![Diagram of interface case mounting screws](image)

   - Interface case
   - Mounting screws 3

* When mounting the interface unit 1 using a cushioning material 4, be sure to mount it in a location where it will not fall.

   ![Diagram of cushioning material](image)

   - Interface unit 1
   - Cushioning material 4

When mounting the interface unit 1 inside a ceiling or wall, install an access door to facilitate maintenance.

When the interface unit 1 is mounted above an indoor unit, it should be positioned 40 mm or more away from the unit to ensure that ceiling grills can be removed.

Attach the 5-core connecting cable of the interface unit 1 here. Store extra 5-core connecting cable in the ductwork space behind the indoor unit.

* If there is any slack in the 5-core connecting cable, use a fastener type A to keep it in place.
3. Setting the Switches

If the system is not configured correctly, the unit will not function properly. You may be unable to control the functions of the RAC from the System Controller/ME Remote Controller or functions not available on your RAC could appear on the System Controller/ME Remote Controller display. You should therefore ensure that the system is properly configured before connecting the power supply.

■ SW500 No. 1, No. 2 - Not in use
These should be set to OFF (if set to ON, the device will not communicate properly with the System Controller).

■ SW500 No. 3 - Power On/Off Settings
This setting indicates whether the RAC should be turned off or on when power is supplied to the RAC or M-NET Interface.

Turn on with power No
[Unit remains off when the power is supplied.]

Turn on with power Yes
[Unit turns on when the power is supplied.]

■ SW500 No. 4 - Availability of RAC purifier or fan mode
If there is no “Purifier” button on the wireless remote control, and if the word “Fan” does not appear when the “Mode” button is pressed, the purifier and fan modes are not available (set to OFF).

Does not have a purifier or fan mode

Has a purifier or fan mode

■ SW510, SW501 - Address settings
Specifies the address settings for centralized management (address settings can be set from 01-50).

Self-Address

SW510 sets the 10s position of the address and SW501 sets the 1s position of the address.

For example, to set a unit to the address 25, set SW510 to “2” and SW501 to “5”.

---

**OPTICAL PARTS**
4. Connecting the M-NET Interface

Connect the M-NET Interface board to the RAC indoor control board.

- The cables connected to the RAC should be mounted on or near the RAC. If the connecting cable is not securely mounted, the connector may detach, break, or malfunction.
5. Connecting the M-NET Interface, the Power Supply, and the ME Remote Controller

- When connecting the unit to a system controller or ME Remote Controller, connect the transmission line of the M-NET to the control signal terminal.
- Cross the shield portion of each connecting wire using the S terminal only when cross wiring the connection wires.
- When connecting the connection wrings (A) and the ME Remote Controller connection wrings (B) to the terminal board, there is no need to worry about polarity.

When the connection wrings (A) are not cross-wired

- After completing the wiring, securely affix a cord clamp to each electrical wire.

When the connection wrings (A) are cross-wired

- Electrical work should be performed in accordance with the Technical Standards Regarding Electrical Equipment and the Interior Wiring Standards.
- Connection wiring and remote control wiring should be located as far away from other electrical wiring as possible. Placing them too closely together could cause a malfunction.
6. Notes Regarding Use

Please read this information carefully before attempting a test run. The following control information should be thoroughly explained and provided to the users of this device. (Please provide these instructions to the user once the installation is complete.)

* This M-NET Interface operates RACs using the controls of a packaged air conditioner (city-multi), but there are several limitations imposed as a result of the functional differences between RACs and packaged air conditioners.

1. When operating the system using a system controller or ME Remote Controller, these operations will not appear on the display of the wireless remote controller.

2. The dehumidifying modes of individual RACs cannot be operated using the ME Remote Controller/System Controller. When an independent dehumidifying mode is set using the remote controller that came with the RAC, "Dry" will appear on the display because there is no corresponding mode on the ME Remote Controller/System Controller.

3. Functions that are available on the ME Remote Controller/System Controller but that are not available on the RAC can be operated by switching to a predetermined separate operation mode. (See the "Table of RAC Functions Activated from the ME Remote Controller/System Controller.")

4. Functions that are available on the remote controller of the RAC but are not available on the ME Remote Controller/System Controller will produce a predetermined display. In this case, the actual operation and the display may differ. (If the fan speed is automatically set using the remote controller that came with the RAC, the setting "High" will appear on the ME Remote Controller/System Controller. Likewise, if the fan direction is set to automatic, the setting "Downward Air Flow 80%" will appear on the ME Remote Controller/System Controller.)

5. Because the temperature range of the RAC is broader than the ME Remote Controller/System Controller, when the RAC is set to lower than 17°C or higher than 30°C, the temperature display on the ME Remote Controller/System Controller will show the minimum or maximum temperature that can be set. (For example, even if the room air conditioner is set to cool a room to 16°C, the display on the ME Remote Controller/System Controller may read "17°C.") The RAC operates according to the room temperature detected by the RAC unit.

6. Timer operations should be set using only the remote controller that came with the RAC or the ME Remote Controller/System Controller. If both are used to set the timer to the same time, the timer will not function properly.

7. When the timer is set using the remote controller that came with the RAC, the timer information will not be displayed on the ME Remote Controller/System Controller.

8. If the timer is set using the ME Remote Controller/System Controller, the timer set using that device will not be cancelled even if the unit is turned off using the remote controller that came with the RAC.

9. When manual operations using the system controller are prohibited, the remote controller that came with the RAC will not function, but the beeping sound that is emitted when it is operating normally will still sound.

10. To clear an error message from the display of the ME Remote Controller/System Controller, briefly turn off the unit using the ME Remote Controller/System Controller or the remote controller that came with the RAC. (The error display on the air conditioner unit may be cleared automatically, but it will not clear from the ME Remote Controller/System Controller until the unit is turned off.)

11. The room temperature sensor installed in the ME Remote Controller cannot be used.
# Table of RAC Functions Activated from the ME Remote Controller/System Controller

This table shows the RAC functions that can be activated by the ME Remote Controller/System Controller.

</tr>
</tbody>
</table>

* Some items may not be displayed, depending on the switch settings.
* When operating the unit using the remote controller that came with the RAC, the operation shown on the remote is the one that will be activated on the actual RAC unit. In this case, the information shown on the display of the ME Remote Controller/System Controller may not accurately reflect the unit’s actual operations (see the "Notes Regarding Use").
Enables regulate up to 8 indoor units from one single remote controller. ON/OFF selection and operation status confirmation is possible.

- Mounting Wall

This centralized controller can be mounted on a wall with a thickness of 6-30 mm.

Since the maximum wall thickness for the centralized controller 1 mounting screw M4 × 30 2 is 17 mm, use screws of the appropriate length for the wall thickness if the wall is between 17 mm and 30 mm thick.

(The best length for an M4 mounting screw is the wall thickness plus 13 mm.)

1-1. Connection Requirements

The MA & Contact terminal interface (MAC-397IF-E) is necessary to connect MAC-821SC-E with RAC.

Breaker capacity 10 A

Connect to the supply terminals and leave a contact separation of at least 3 mm at each pole to disconnect the source power pole.

When the power switch is shut off, it must disconnect all poles.

Mitsubishi Electric Corporation
1-2. Selecting an Installation Site

- The centralized controller is an exposed, wall-mounted model.
  Install the unit in a dry location.
- For information on selecting a mounting wall, see the "Mounting Wall" in section 2.

Switch Box

The centralized controller power and connection wiring is generally direct wired.
The switch box supplied (with switch box covers for 2 units) should therefore be used for installing the centralized controller.

1-3. Electrical Work

- Use 1.5 mm² power supply wire (2-core + ground).
- For the connection wire, use a control cable CVV (0.5 mm² 3-core) or equivalent product.
- CVV is a control cable which is sheathed in polyvinyl chloride with polyvinyl insulated wires inside.
- Complete the power supply wire and connection wire work before mounting the centralized controller.
- The electrical work should be performed in accordance with the Technical Standards Regarding Electrical Equipment and the Interior Wiring Standards.

1-4. Assigning Air Conditioner Device Numbers

- The numbers (1B8) displayed on the control panel of the centralized controller correspond to the numbers of each connected air conditioner (device number).
- Assign air conditioner device numbers that correspond to the numbers shown on the control panel based on the structure of the building or the layout of the rooms in which the air conditioners are installed.

1-5. Sample of Configuration

This figure shows a sample 4-unit configuration.

1-6. Mounting Diagram
2. Mounting the Centralized Controller/Direct Wiring

2-1. Mounting Preparations

1. Remove 2 screws, and remove the base plate 2 from the switch box 3. Set the 2 screws aside, as they will be used in the section on "4-1. Mounting the Base Plate" under "Mounting the Centralized Controller".

2. Insert the switch box 3 into the wall. Size the hole in the wall to ensure that there is no gap between the switch box 3 and the wall surface. Use the switch box 3 wall installation dimensions and opening dimensions shown in the figure below.

3. Feed the power supply wire 5, connection wire C 3, and ground wire from inside of the wall, and pull them through the switch box 3 into the room about 150 mm. In addition, when not using a conduit for a connection wire C 3, be sure to install a rubber seal (large) 5 or rubber seal (small) 5 into the hole in the switch box 3 before feeding the connection wire C 3 through the hole. Use the PG connection E prepared at the installation site to secure the power supply wire 5 in the hole in the switch box 3.

4. After the screws have been removed from the cover of the centralized controller 1, remove the cover using a flathead screwdriver.

2-2. Connecting the Connection Wire

1. Connect the power supply wire (2-core + ground) 5 to the power terminal. After they are connected, check that the wires cannot be easily pulled off.

Work on Power Supply wire End
- Be sure to use 1.5 mm² power supply wire 5 (2-core + ground).
- The work on power supply wire end should be performed as shown in the figure below.
2 Mount the ground wire using the ground wire mounting screws.

3 Connect the connection wire (3-core) to the MA & Contact terminal interface (MAC-397IF-E), (sold separately) corresponding to the air conditioner device number of each unit on the signal terminal.
   - One signal terminal can be used for connecting 4 rooms.
   - Connect the devices corresponding to their display number on the control panel.
   - Connect the centralized controller to the adapters as shown below.

![Work on Connection Wire End](Image)

Note: Centralized controller side

4 Connect the devices corresponding to their display number on the control panel.

3. Mounting the Centralized Controller

3-1. Mounting the Base Plate

Insert the base plate into the switch box, and re-mount it using the screws removed in the "3-1 Mounting Preparations". Be sure to mount the base plate so the up arrow is facing upward. Also, be careful not to damage the wires by getting them caught between plate and the switch box.

3-2. Mounting the Centralized controller

1 Before mounting the unit, apply the supplied sealing materials to the base plate and fill in the space between the switch box and the hole in the wall (a gap here could result in dew condensation). Cut the sealing material to a length such that it can be wrapped around the hole in the wall based on the fixed position.

2 Connect the connection cord from the base plate through the slot in the centralized controller.

3 Mount the centralized controller to the base plate using the supplied mounting screw. Be careful not to damage the connection wires by getting them caught in the walling materials.

4 Using the supplied screw, attach the cover to the centralized controller.

5 To attach the cover to the centralized controller, fit the tabs along the top of the cover into the holes in the centralized controller and then push the lower portion of the cover into place.
4. Test Run

A test run should be performed after the centralized controller and the MA & Contact terminal interface (MAC-397IF-E) have all been installed.

1. Turn the power switch on each air conditioner to ON.
2. Press the ON/OFF button on the wireless remote controller for each air conditioner to make sure the air conditioner turns on, and then press the button again to turn each unit off.
3. Supply power (AC 220-240 V) to the centralized controller.
4. Press the ON/OFF button on the upper part of the control panel of the centralized controller, and confirm that the (green) operation indicator lamp for that device number comes on. Also confirm that the corresponding air conditioner has turned on (the operation indicator lamp will not come on if the air conditioner is not connected).
5. Press the ON/OFF button again, and confirm that the operation indicator lamp goes out and that the air conditioner unit turns off.
6. Repeat steps 4 and 5 again for each device number.
7. Press the All OFF button, and confirm that all the (green) operation indicator lamps go out and that all the air conditioners turn off.

5. Room Name Display

Select the appropriate stickers from the room name stickers supplied, and affix them to the display section of the panel.

Caution

Be sure not to tighten the mounting screw too tight. Doing so may disfigure the centralized controller and prevent the cover from closing securely.
This kit (L/N/Earth) is used when the power supply of the indoor unit and the outdoor unit is separated. (For PUHZ applications only)

For PAC-SG96HR-E only

1:1 System

For models without heater
The indoor power supply terminal kit is required.

Outdoor unit power supply
Earth leakage breaker
Wiring circuit breaker or isolating switch
Outdoor unit
Indoor unit / outdoor unit connecting cords
Wired remote controller(option)
Indoor unit
Option
Indoor unit power supply

Stemmatate a label B that is included with the manuals near each wiring diagram for the indoor and outdoor units.

Simultaneous twin/triple/four system

For models without heater
The indoor power supply terminal kits are required.

Outdoor unit power supply
Earth leakage breaker
Wiring circuit breaker or isolating switch
Outdoor unit
Indoor unit / outdoor unit connecting cords
Wired remote controller(option)
Indoor unit
Option
Indoor unit power supply
Indoor unit earth

Stemmatate a label B that is included with the manuals near each wiring diagram for the indoor and outdoor units.
3. Attachment method

■ Wall mounted, PKA-RP.HAL type:
1. Remove the electrical box covers (front and side).

■ Wall mounted, PKA-RP.KAL type:
1. Remove the electrical box covers (front and side).

2. Attach terminal block ① using screw ② in the direction shown in the figure.
3. Change the relay connectors of blue and yellow lead wires, secure the ground wire using screw ① at the position shown in the figure, and then bundle the lead wires using fastener ⑤.

4. Electric wiring
Be sure to do the electric wiring following the steps in each indoor unit installation manual.

5. Paste the labels enveloped in the instruction document of indoor unit near the electric wiring diagrams of both indoor and outdoor units.
Three types of labels (labels A-C) are provided: Paste the label B. (Separate indoor unit/outdoor unit power supplies... Label B)

6. DIP switch settings of the outdoor unit control board
It is necessary to change the settings of DIP switch on the outdoor unit control board.

<table>
<thead>
<tr>

Ceiling concealed, PEAD-RP.JA(L) type
1. Remove the cover of electric parts box.
2. Attach terminal block ① using screw ② in the direction shown in the figure.
3. Change the relay connectors of blue and yellow lead wires.

Ceiling concealed, PEAD-RP.GA type:
1. Remove the terminal block cover of electric parts box.
2. Attach terminal block ① using screw ② in the direction shown in the figure.
3. Change the relay connectors of blue and yellow lead wires.
4. Electric wiring
Be sure to do the electric wiring following the steps in each indoor unit installation manual.

5. Paste the labels enveloped in the instruction document of indoor unit near the electric wiring diagrams of both indoor and outdoor units.
Three types of labels (labels A-C) are provided: Paste the label B.
(Separate indoor unit/outdoor unit power supplies... Label B)

6. DIP switch settings of the outdoor unit control board
It is necessary to change the settings of DIP switch on the outdoor unit control board.

<table>
<thead>
<tr>
<th>Outdoor unit DIP switch settings (when using separate indoor unit / outdoor unit power supplies only)</th>
</tr>
</thead>
<tbody>
<tr>
<td>ON</td>
</tr>
<tr>
<td>OFF</td>
</tr>
</tbody>
</table>

7. Test run
Perform a test run following the steps in the installation manual of the outdoor unit.

Change of connectors
(except PCA-RP-KA type)

If the indoor and outdoor units have separate power supplies, change the connections of the connectors as shown in the following figure.

(PCA-RP-KA type)

If the indoor and outdoor units have separate power supplies, change the connections of the connectors as shown in the following figure.
Indoor power supply terminal kit  PAC-SH52HR-E

Photo

Descriptions

This kit is used when the power supply of the indoor unit and the outdoor unit is separated. (for PLA-RP•BA series applications only)

Applicable Models

- PLA-RP-BA/BA2/BA3

Specifications

How to Use / How to Install

1. Overview
This kit is used when the power supply of the indoor unit and the outdoor unit is separated, (for PLA-RP.BA applications only)
Refer to the installation manual of the indoor unit as well.

2. Provided parts
Confirm the following parts are included.

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Terminal block (lead wires already wired) x 1</td>
</tr>
<tr>
<td>2</td>
<td>Cover x 1</td>
</tr>
<tr>
<td>3</td>
<td>Screw x 3</td>
</tr>
<tr>
<td>4</td>
<td>Fastener (to tie lead wires) x 2</td>
</tr>
<tr>
<td>5</td>
<td>Seal x 1</td>
</tr>
</tbody>
</table>

3. Attachment method
1. Remove the cover of electric parts box.
2. Use the two screws 3 to attach the terminal block 1 in the direction shown in the figure, and wire the leads to electric parts box.
3. Bundle the leads with other leads using fastener 4; Cut off any surplus.

Terinal block attachment position
Terminal block 1
Screws 3 (2pcs)

4. Hook cover 2 onto terminal block 1 to attach the cover, and use screw 3 (1 Piece) to secure it to the indoor unit.

Fastener 4 (1 Piece)
Portion to be hooked
Screw 3 (1 Piece)
Cover 2

Exchange the blue and yellow relay connectors.
4. Electric wiring

Be sure to do the electric wiring following the steps in each indoor unit installation manual.

5. Paste the labels enveloped in the instruction document of indoor unit near the electric wiring diagrams of both indoor and outdoor units.

Three types of labels (labels A-C) are provided: Paste the label B. (Separate indoor unit/outdoor unit power supplies... Label B)

6. Paste the seal ⑤ on the surface of indoor electric cover.

7. DIP switch settings of the outdoor unit control board

It is necessary to change the settings of DIP switch on the outdoor unit control board.
Advanced MA remote controller with the large size dot liquid crystal display. Multi-language display and weekly timer function are available.

**Applicable Models**

- MSZ-FD25/35/50VA(S)
- MSZ-GA60/71VA
- MSZ-GE22/25/35/42/50VA
- MFZ-KE25/35/50VA
- MLZ-KA25/35/50VA

# How to Use / How to Install

## 1 Confirming the Supplied Parts

Confirm that the box includes the following parts, in addition to this installation manual:

1. Remote controller (cover, body) ......................................................... 1
2. Cross recessed pan head screw (M4 × 30) ........................................ 2
3. Wood screw (4.1 × 16, used for directly hooking to the wall) .......... 2
4. Caution label (in 12 languages) ....................................................... 1

*1 For the remote control, obtain a 2-core cable between 0.3 and 1.25 mm² at the site.
*2 PAC-YT32PTA cannot be connected.

## 2 How To Install

1. Choose a place in which to install the remote controller (switch box).

   Be sure to observe the following steps:

   (1) Temperature sensors are provided with both the remote controller and the indoor units. When using the remote controller temperature sensor, the master remote controller detects the room temperature. Install the master remote controller in a place where the average room temperature can be detected and which is not affected by any heat source from direct sunlight or air blown from air conditioning units.

   **CAUTION** The place where (when) the difference between the room temperature and the wall temperature is large, the wall temperature that is affected by the temperature of the wall on which the remote controller is installed is measured. Therefore, the difference between the room temperature and the measured wall temperature may be large. When the installation site is one of the followings, use of a temperature sensor for an indoor unit is recommended.
   - When the room is not well-ventilated and the air does not reach the wall on which the remote controller is installed.
   - When the difference between the temperature of the wall on which the remote controller is installed and the room temperature.
   - When the backside of the wall on which the remote controller is installed is exposed to the outdoor air.
   - When the temperature changes drastically, the temperature may not be measured accurately.

   When a remote controller temperature sensor is used in a place which is likely to be affected by the wall on which the remote controller is installed, use of an optional spacer (Model: PAC-YT83RS) for a remote controller is recommended.

   (For how to set the main and sub remote controller, see step (1) “Remote controller” [4]-3. (1) in section 6 Function Selection.

   (2) When installing on either the switch box or the wall, allow extra space around the remote controller as shown in the figure at the right.

   **NOTE:** Make sure that there is no wiring or wire near the remote controller sensor. If there is, the remote controller cannot detect the exact room temperature.

   (3) Parts which must be supplied on site.
   - Switch box for two units
   - Thin-copper wiring pipe
   - Lock nut and bushing
   - Surface raceways

2. Seal the remote controller cord with putty in order to prevent the possible entry of dew, water droplets, cockroaches, other insects, etc.

   **When using the switch box**
   - When installing on the switch box, seal the connections between the switch box and wiring pipe with putty.

   **When installing directly on the wall**
   - When opening a hole using a drill for the remote controller cord (or when taking the cord out of the back of the remote controller), seal the hole with putty.
   - When routing the cord via the portion cut off from the upper cover, similarly seal that portion with putty.
   - When taking the remote controller cord from back of the controller, use surface raceways.

3. Remove the remote controller cover.

   - Insert a minus screwdriver into one of the open slots and move the screwdriver in the arrow direction.

   **CAUTION** Do not turn the screwdriver in the slot. Doing so may damage the slot.
4. Install the lower case on the switch box or directly on the wall.

When using the switch box

Switch box for two units
Remote control cord
(See 5 below)
Cross recessed pan head screw
Seal the remote control cord lead-in hole with putty.
(See 2 above)

When installing directly on the wall

Remote control cord
(See 5 below)
Wood screw

To connect the remote control cord, peel 6mm of coating.

CAUTION Do not tighten the screws too tight. Doing so may deform or crack the lower cover.

NOTE: Do not install the controller on a slanted surface. Install it in a flat plane.

5. Connect the remote control cord to the remote controller terminal block.

To indoor unit MA remote controller or A control terminal block
There is no polarity.

CAUTION Do not use crimp terminals to connect to remote controller terminal blocks. The terminals may contact the board and cause trouble or contact the cover and damage the cover.

CAUTION Prevent remote cord chips from getting into the remote controller. Electric shock or malfunction may result.

6. Wiring hole for installing directly on the wall (or open wiring)

- Cut off the shaded area from the upper cover using a knife, nippers, etc.
- Take out the remote control cord connected to the terminal block via this portion.

7. Install the cover to the remote controller.

First, hook the cover to the two upper claws and then fit it to the remote controller.

CAUTION Press the cover until it snaps shut. If not, it may fall off. Do not turn the screwdriver in the slot. Doing so may damage the slot.

NOTE: A protection sheet is stuck to the operation section. Peel off this protection sheet before use.

3 Test Run

1. Before making a test run, refer to the “Test Run” section of the indoor unit installation manual.
2. Press the [TEST] button twice successively within three seconds. Test run starts.
3. Stop the test run by pressing the [ ] button.

4. If trouble occurred during the test run, refer to the “Test Run” section of the indoor unit installation manual.

4 Ventilation Setting

Make this setting only when interlocked operation with LOSSNAY is necessary with CITY MULTI models.

3 Ventilation Setting

Make this setting only when interlocked operation with LOSSNAY is necessary with CITY MULTI models.

This setting cannot be made with Mr. SLIM air conditioners.

NOTE: When using LOSSNAY units in conjunction, interlock the addresses of all indoor units within the group and address of LOSSNAY units.

Perform this operation when you want to register the LOSSNAY, confirm the registered units, or delete the registered units controlled by the remote controller.

The following uses indoor unit address 05 and LOSSNAY address 30 as an example to describe the setting procedure.

[Setting Procedure]

1. Stop the air conditioner using the remote controller [ ] button.
   If the OFF display shown below does not appear at this time, step 2 cannot be performed.

2. Press and hold down the [FILTER] and [] buttons at the same time for two seconds. The display shown below appears. The remote controller confirms the registered LOSSNAY addresses of the currently connected indoor units.
Registration confirmation result
- The indoor unit address and registered LOSSNAY address are displayed alternately.

![Indoor unit address and indoor unit display] <LOSSNAY address display and LOSSNAY display>
- When LOSSNAY are not registered

- If registration is unnecessary, end registration by pressing and holding down the [FILTER] and [TEST] buttons at the same time for two seconds.
- If a new LOSSNAY must be registered, go to step 1. Registration procedure. If you want to confirm another LOSSNAY, go to step 2. Confirmation procedure. To delete a registered LOSSNAY, go to step 3. Deletion procedure.

1. Registration procedure

Set the address of the LOSSNAY and the indoor unit connected by the remote controller you want to register using the [TEMP] and [CLOCK] buttons. (01 to 50)

Set the address of the LOSSNAY you want to register using the [CLOCK] buttons. (01 to 50)

Press the [TEST] button, and register the set indoor unit address and LOSSNAY address.
- Registration end display
  The indoor unit address and "IC" and LOSSNAY address and "LC" are alternately displayed.
- Registration error display
  If the address was not correctly registered, the indoor unit address and registered LOSSNAY address are alternately displayed.

Cannot be registered because the registered indoor unit or LOSSNAY does not exist.

2. Confirmation procedure

Set the address of the indoor unit connected by the remote controller whose LOSSNAY you want to confirm using the [TEMP] and [CLOCK] buttons. (01 to 50)

Press the [MENU] button and confirm the LOSSNAY address registered at the set indoor unit address.
- Confirmation end display (When LOSSNAY is connected.)
  The indoor unit address and "IC" and registered LOSSNAY address and "LC" are alternately displayed.
- Confirmation end display (When LOSSNAY is not connected.)
  Registered indoor unit address does not exist.

3. Deletion procedure

Use this procedure when you want to delete registration of indoor units connected by the remote controller and LOSSNAY.

Confirm (see 2. Confirmation procedure) the LOSSNAY you want to delete and display the indoor units and LOSSNAY confirmation results.

Press the [ON/OFF] button twice and delete registration of the LOSSNAY registered at the set indoor unit.
- Deletion end display
  Indoor unit address and "----" and registered LOSSNAY address and "----" are alternately displayed.
- Deletion error display
  When deletion was not performed properly.
## 5 Function Selection

1. **Function selection of remote controller**
   
   The setting of the following remote controller functions can be changed using the remote controller function selection mode. Change the setting when needed.

<table>
<thead>
<tr>
<th>Item 1 (Language setting)</th>
<th>Item 2 (Function selection)</th>
<th>Item 3 (Setting content)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Change Language</td>
<td>Language setting to display</td>
<td>Display in multiple languages is possible.</td>
</tr>
<tr>
<td>Function limit</td>
<td>Display of operation limit</td>
<td>Setting the range of operation limit (operation lock)</td>
</tr>
<tr>
<td>(FUNCTION SELECTION)</td>
<td>Setting of use or non-use of automatic mode</td>
<td>Setting the use or non-use of &quot;automatic&quot; mode</td>
</tr>
<tr>
<td>Mode selection</td>

<td>Setting of contact number</td>
<td>Setting contact number display in case of error</td>
</tr>
<tr>
<td>(DISP MODE SETTING)</td>
<td>Setting of automatic mode display</td>
<td>Setting the automatic mode display (Cooling) or (Heating) display during operation with automatic mode</td>
</tr>
</tbody>
</table>

### Function selection workflow

1. Stop the air conditioner to start remote controller function selection mode. → 2. Select from item 1. → 3. Select from item 2. → 4. Make the setting. (Details are specified in item 3) → 5. Setting completed. → 6. Change the display to the normal one. (End)

### Detailed setting

#### 4[1]. CHANGE LANGUAGE setting

- Press the [MENU] button to change the language.
  - ① Japanese (JP), ② English (GB), ③ German (D), ④ Spanish (E), ⑤ Russian (RU), ⑥ Italian (I), ⑦ Chinese (CH), ⑧ French (F)

#### 4[2]. Function limit

1. **Operation function limit setting (operation lock)**
   - To switch the setting, press the [ON/OFF] button.
   - ① ON (Initial setting value): The automatic mode is displayed when the operation mode is selected.
   - ② OFF: The automatic mode is not displayed when the operation mode is selected.

2. **Temperature range limit setting**
   - Setting of temperature range limit (operation lock)
   - To switch the setting, press the [ON/OFF] button.
   - ① ON (Initial setting value): The automatic mode is displayed when the operation mode is selected.
   - ② OFF: The automatic mode is not displayed when the operation mode is selected.

3. **Display change**
   - Setting display in multiple languages
   - To switch the setting, press the [ON/OFF] button.
   - ① Russian (RU), ② Japanese (JP), ③ English (GB)

### Display

- **Normal display**
  - (Display when the air conditioner is not running)
  - Press the [button.
  - Press the button.

- **Dot display**
  - The language that is selected in CHANGE LANGUAGE mode appears on this display. English is set in this manual.

### Diagram

- Wired Remote Controller (with Weekly Timer Function) PAR-21MAA-J

---

**NOTE**

Timer operation starts when the display for remote controller function selection is changed to the normal one.
### Table 1. Function selection contents (For a detailed description of the factory settings and mode of each indoor unit, refer to the indoor unit installation manual.)

</tbody>
</table>

**NOTE:** When the indoor unit functions were changed using the function selection after installation is complete, always indicate the set contents by entering O or other mark in the appropriate check field of Table 1.

**Function selection flow**

First grasp the function selection flow. The following describes setting of “Room temperature detection position” of Table 1 as an example. (For the actual setting procedure, see [Setting procedure] 1 to 8.)

1. Check the function selection set contents.
2. Switch to the FUNCTION SELECTION mode. (Press ③ and ⑨ simultaneously in the remote controller OFF state.)
3. Refrigerant address specification 00 (Outdoor unit specification) (Unnecessary for single refrigerant system.)
4. Unit address No. specification 00 (Indoor unit specification)
5. Registration (Press button ⑤) (Specified indoor unit Fan operation)
6. Mode No. Selection 02 (Room temperature detection position)
7. Setting No. selection 3 (remote controller fixed) (Buttons ⑥ and ⑩ operation)
8. Register (Press button ⑤) (Specified indoor unit Fan operation)
9. Ending function display (Press buttons ② and ⑩ simultaneously.)
Wired Remote Controller (with Weekly Timer Function)  PAR-21MAA-J

[Procedure] (Set only when change is necessary.)

① Check the set contents of each mode. When the set contents of a mode were changed by function selection, the functions of that mode also change.

② Set the remote controller to Off.

③ Set the outdoor unit refrigerant address No.

④ Press and hold down the [FILTER] and [TEST] buttons at the same time for two seconds or longer.

⑤ Refrigerant address and unit address No. registration

⑥ Mode No. selection

⑦ Select the setting contents of the selected mode.

⑧ The contents set at steps ③ to ⑦ are registered.

⑨ End function selection.

* Do not operate the air conditioner from the remote controller for 30 seconds after the end of function selection.

NOTE: When the functions of an indoor unit were changed by function selection after the end of installation, always indicate the set contents by entering a O or other mark in the appropriate check field of Table 1.
### 6 Self check

Retrieve the error history of each unit using the remote controller.

① Switch to the self check mode. When the [CHECK] button is pressed twice successively within three seconds, the display shown below appears.

- Self check address or self check refrigerant address

② Set the address or refrigerant address No. you want to self check. When the [TEMP ] and (Δ) buttons are pressed, the address decreases and increases between 01 and 50 or 00 and 15. Set it to the address No. or refrigerant address No. you want to self check.

③ Self check result display <Error history> (For the contents of the error code, refer to the indoor unit installation manual or service handbook.)

- Error code 4 digits or error code 2 digits
- When there is no error history

- Address 3 digits or unit address No. 2 digits
- When opposite side does not exist

④ Error history reset

The error history is displayed in ③ Self check results display.

- When the [MENU] button is pressed twice successively within three seconds, the self check address or refrigerant address flashes.

- When the error history was reset, the display shown below appears.

⑤ Self check reset

There are the following two ways of resetting self check.

- Press the [CHECK] button twice successively within three seconds. Resets self check and returns to the state before self check.
- Press the [ON/OFF] button Self check resets and indoor units stop.

*(When operation is prohibited, this operation is ineffective.)*

### 7 Remote Controller Check

When the air conditioner cannot be controlled from the remote controller, use this function to check the remote controller.

① First check the power mark.

- When normal voltage (DC12V) is not applied to the remote controller, the power mark goes off. When the power mark is off, check the remote controller wiring and the indoor unit.

② Switch to the remote controller check mode.

- When the [CHECK] button is pressed twice successively within three seconds, the display shown below appears.

- When the error history was reset, the display shown below appears.

③ Remote controller check result

- When remote controller is normal

- When remote controller is faulty

- Remote controller switching is necessary.

④ Remote controller check reset

- When the [CHECK] button is pressed twice successively within three seconds, remote controller check resets and the "PLEASE WAIT" and RUN lamp flash. Approximately 30 seconds later, the remote controller returns to the state before remote controller check.

- When data error count is 02

- Remote controller send data

- Send data on transmission line

- Data error count = the difference between the number of bits of remote controller send data and the number of bits actually sent to the transmission line. In this case, the send data was disturbed by the noise, etc. Check the transmission line.
Enables the use of wired remote controller (PAR-21MAA) for wall mounted models.

### Applicable Models
- PKA-RP HAL
- PKA-RP KAL

</tbody>
</table>

2 Installing the terminal block

(1) PKH-P - GALH/PKA-RP - GAL

1. Open the front grille and remove the screw (x 1) to remove the terminal block cover.
2. Disconnect the connector which is a wireless remote controller relay line, (with pressing the hook)
3. Remove the screw cap and screw (x 3).
4. Place the Auto vane as illustrated and remove the bottom of the front panel first.
5. Remove the screw (x 1) to remove the p.c. board cover.
6. Secure the terminal block (TB5) to the electrical box with cross-recessed tapping screws.
7. Connect the lead wire A to the terminal block (TB5) and the connector (CN22) in the indoor p.c. board.
   (Lead wire should be run through the clamp pointed by the arrow.)
8. Connect the transmission lines of the wired remote controller and 2 or group remote controller to the bottom of the terminal block (TB5) [screw terminal].
9. Install the panel, terminal block cover, p.c. board or connector as they had formed first.

(2) PKH-P - FALH/PKA-RP - FAL

1. Remove the side panel screws (x2) to remove the side panel.
2. Remove the side panel and disconnect the remote controller relay connector.
3. Remove the screw (x1) and terminal block (TB5) cover.
4. Remove the screw (x1) and p.c. board cover.
5. Remove the screw (x1) and terminal block cover installing piece.
6. Secure the terminal block (TB5) to the electrical box with cross recessed tapping screw.
7. Connect the lead wire B to the terminal block (TB5) and connector (CN22) in the indoor p.c. board.
8. Connect the transmission lines of the wired remote controller and 2 or group remote controller to the bottom of the terminal block (TB5) [screw terminal block].
9. Install the panel, terminal block cover, p.c. board cover or connector as they had formed first.
3 Transmission line wiring

As system configurations differ for remote controller wiring, execute wiring in accordance with the following example.
- The numbers ①, ② and ③ in the chart correspond to items ①, ② and ③ below.

(1) When remote controllers are connected to each refrigerant system
(Standard 1:1, simultaneous twin, and simultaneous triple)

[Example]

(2) Other refrigerant system groupings
- Set the refrigerant address using the DIP switch of the outdoor unit. (See the technical manual for details.)
- In this case, all the indoor units enclosed in the broken-line ①, ② can be controlled as one group.
  ① Wiring from the Remote Control
    - This wire is connected to TBS (terminal block for remote controller) of the indoor unit (non-polar).
    - If different types of indoor units are mixed together in the simultaneous multiple group, surely connect the remote controller to the indoor unit with the most functions (fan speed, vane, louver, etc.).
  ② When a Different Refrigerant System Grouping is Used.
    - Group the system using the remote controller wiring. Execute crossover wiring of the remote controller wire to any single indoor unit of the refrigerant system to be grouped.
    - If different types of indoor units are mixed together in the same group, be sure to make the main unit (refrigerant address = 00) the indoor unit with the most functions (fan speed, vane, louver, etc.).
    - Also if new type belongs to simultaneous multiple group, be sure to fulfill the above conditions ①.
    - Up to 16 refrigerant systems can be controlled as one group using the slim A remote controller.

NOTES: ① Crossover wiring to the indoor unit (TBS) of the same refrigerant system is not allowed. If such crossover wiring is executed, the system will not operate correctly.
- Crossover wiring between remote controllers is not allowed. There is only one terminal block on the remote controller for wiring.

② To two remote controllers can be connected to a single group.
  - Be sure to designate the main remote controller and the subordinate remote controller if two remote controllers are used in one group.
  - If a group only has a single remote controller, it automatically becomes the main controller. But if a group has two remote controllers, one must be designated as the main remote controller and the other as the subordinate remote controller. (For how to set the main and subordinate switch, see step (2) in [Function Settings].)
  - Remote controller wiring can be extended up to a maximum of 500 meters. Note, however, that the supplied remote controller cord is 3 meters or less. A 0.3 mm² to 1.25 mm² power cable must be acquired locally if more than 3 meters is needed.

⚠️ CAUTION Remote controller wiring
- Avoid using multicore cable as malfunctions may occur.
- As much as possible, keep the remote controller wire away from grounding items (steel frames of buildings or metal, etc.).
4 How To Install

(1) Choose a place in which to install the remote controller (switch box).
   Be sure to observe the following steps:
   ① Temperature sensors are provided with both the remote controller and the
      indoor units. When using the remote control temperature sensors, the main
      remote controller detects the room temperature. Install the main remote con-
      troller in a place where the average room temperature can be detected and
      also which is not affected by any heat source from direct sunlight or air blown
      from air conditioning units.
      (For how to set the main/subordinate remote controller, see step (2) in
      7 Function Settings) and for how to set the temperature sensor, see
      7 Function Settings.)
   ② When installing on either the switch box or the wall, allow extra space around
      the remote controller as shown in the figure on the right. (When using it in
      combination with a Program timer, see the installation manual for the Program
      timer.)

   NOTE: Make sure that there is no wiring or wire near the remote controller
   sensors. If there is, the remote controller cannot detect the exact room
   temperature.

   ③ Procure the following Parts locally.
      • Switch box for two units
      • Thin copper conduit tube
      • Lock nuts and bushings

(2) Seal the remote controller cord lead-in hole with putty in order to
    prevent the possible entry of dew, water droplets, cockroaches, other
    insects, etc.
    • When installing on the switch box, seal the connections between the switch
      box and wiring pipe with putty.

    • When opening a hole using a drill for the remote control cord (or taking the
      cord out of the back of the remote control), seal that hole with putty.
    • When routing the cord via the portion cut off from the upper case, equally
      seal that portion with putty.
(3) Install the lower case on the switch box or directly on the wall.

**CAUTION** Do not tighten the screws too much. Doing so may result in a deformation or crack of the lower case.

**NOTES:**
- Choose a flat plane for installation.
- Fix the switch box at more than two places when installing directly on the wall.

When using the switch box

(4) Connect the remote control cord to the remote controller terminal block.
Wire correctly referring to the following figure.

**CAUTION** Do not use crimp terminals to connect to remote controller terminal blocks. The terminals may contact the board and cause trouble or contact the cover and damage the cover.

When installing directly on the wall

(5) Wiring hole for installing directly on the wall (or open wiring)
- Cut off the shaded area from the upper cover using a knife, nippers, etc.
- Take out the remote control cord connected to the terminal block via this portion.

(6) Install the cover to the remote controller.

First, hook the cover to the two upper claws and then fit it to the remote controller.

**CAUTION**
- Press the cover until it snaps shut. If not, it may fall off.
- Do not insert the screwdriver in the slot. Doing so may damage the slot.

**NOTE:** A protection sheet is stuck to the operation section. Peel off this protection sheet before use.

(7) Affix a caution label.
A caution label in English is supplied on the back surface of the control panel door. Affix another caution label in the language of a country where you use the remote control over the English one.
5 Test Run

(1) Before test run
- After completing installation and the wiring and piping of the indoor and outdoor units, check for refrigerant leakage, looseness in the power supply or control wiring, wrong polarity, and no disconnection of one phase in the supply.
- Use a 500-volt megohmmeter to check that the resistance between the power supply terminals and ground is at least 1.0 MΩ.
- Do not carry out this test on the control wiring (low voltage circuit) terminals.

⚠️ WARNING  Do not use the air conditioner if the insulation resistance is less than 1.0 MΩ.

(2) Test run

① ON/OFF button
② Test run display
③ Indoor temperature liquid line temperature display
④ ON/OFF lamp
⑤ Power display
⑥ Error code display
⑦ Test run remaining time display
⑧ Set temperature button
⑨ Mode selection button
⑩ Fan speed button
⑪ TEST button

① Turn on the power at least 12 hours before the test run.
② Press the [TEST] button twice. ➡️ TEST RUN ➡️ liquid crystal display
③ Press the [Mode selection] button. ➡️ Make sure that wind is blown out.
④ Press the [Mode selection] button and switch to the cooling (or heating) mode. ➡️ Make sure that cold (or warm) wind is blown out.
⑤ Press the [Fan speed] button. ➡️ Make sure that the wind speed is switched.
⑥ Check operation of the outdoor unit fan.
⑦ Release test run by pressing the [ON/OFF] button. ➡️ Stop
⑧ Register a telephone number.

The telephone number of the repair shop, sales office, etc., to contact if an error occurs can be registered in the remote controller. The telephone number will be displayed when an error occurs. For registration procedures, refer to the operation manual for the indoor unit.

NOTE: It is not possible to run the in FAN, DRY or AUTO mode.

6 Function Settings

(1) Function setting on the unit (Selecting the unit functions)

Changing the power voltage setting

- Be sure to change the power voltage setting depending on the voltage used.

① Go to the function setting mode. Switch OFF the remote controller.
② Use the ④ and ⑤ buttons simultaneously and hold them for at least 2 seconds. FUNCTION will start to flash.
③ Press the ④ button to set the refrigerant address (Ⅲ) to 00.
④ Press ⑤ and [-] will start to flash in the unit number (Ⅳ) display.
⑤ Use the ⑤ button to set the unit number (Ⅳ) to 00.
⑥ Press the ④ MODE button to designate the refrigerant address/unit number. [-] will flash in the mode number (Ⅰ) display momentarily.
⑦ Press the ⑤ buttons to set the mode number (Ⅰ) to 04.

① Power supply voltage

- 240 V : setting number = 1
- 220 V, 230 V : setting number = 2

② Press the MODE button ④ and mode and the setting number (Ⅰ) and (Ⅱ) will change to being on constantly and the contents of the setting can be confirmed.

③ Press the FILTER ④ and TEST RUN ⑤ buttons simultaneously for at least two seconds. The function selection screen will disappear momentarily and the air conditioner OFF display will appear.

  - Room air temperature is not displayed.
  - One of “Automatic cooling” and “Automatic heating” is displayed under the automatic mode is running. (Initial setting value)
  - Only “Automatic” is displayed under the automatic mode.
[Detailed setting]

[4]-1. CHANGE LANGUAGE setting

The language that appears on the dot display can be selected.

- Press the [ MENU] button to change the language.
  - English (GB), German (D), Spanish (E), Russian (RU), Italian (I), Chinese (CH), French (F), Japanese (JP)
  Refer to the dot display table.

[4]-2. Function limit

(1) Operation function limit setting (operation lock)

- To switch the setting, press the [ ON/OFF] button.
  - no1 : Operation lock setting is made on all buttons other than the [ ON/OFF] button.
  - no2 : Operation lock setting is made on all buttons.
  - OFF (Initial setting value): Operation lock setting is not made.

* To make the operation lock setting valid on the normal screen, it is necessary to press buttons (Press and hold down the [FILTER] and [ ON/OFF] buttons at the same time for two seconds,) on the normal screen after the above setting is made.

(2) Use of automatic mode setting

When the remote controller is connected to the unit that has automatic operation mode, the following settings can be made.

- To switch the setting, press the [ ON/OFF] button.
  - ON (Initial setting value):
    - The automatic mode is displayed when the operation mode is selected.
  - OFF:
    - The automatic mode is not displayed when the operation mode is selected.

(3) Temperature range limit setting

After this setting is made, the temperature can be changed within the set range.

- To switch the setting, press the [ ON/OFF] button.
  - LIMIT TEMP COOL MODE:
    - The temperature range can be changed on cooling/dry mode.
  - LIMIT TEMP HEAT MODE:
    - The temperature range can be changed on heating mode.
  - LIMIT TEMP AUTO MODE:
    - The temperature range can be changed on automatic mode.
  - OFF (initial setting):

* When the setting, other than OFF, is made, the temperature range limit setting on cooling, heating and automatic mode is made at the same time. However, the range cannot be limited when the set temperature range has not changed.

- To increase or decrease the temperature, press the [ TEMP] button.
- To switch the upper limit setting and the lower limit setting, press the [ △ ] button. The selected setting will flash and the temperature can be set.

- Settable range

<table>
<thead>
<tr>
<th>Cooling/Dry mode:</th>

<td>Lower limit: 19°C - 28°C</td>
</tr>
<tr>
<td>Upper limit: 30°C - 19°C</td>
<td>Upper limit: 28°C - 17°C</td>
<td>Upper limit: 28°C - 19°C</td>
</tr>
</tbody>
</table>
[4]-3. Mode selection setting

(1) Remote controller main/sub setting

- To switch the setting, press the [ON/OFF] button.
  1. **Main**: The controller will be the main controller.
  2. **Sub**: The controller will be the sub controller.

(2) Use of clock setting

- To switch the setting, press the [ON/OFF] button.
  1. **ON**: The clock function can be used.
  2. **OFF**: The clock function cannot be used.

(3) Timer function setting

- To switch the setting, press the [ON/OFF] button (Choose one of the followings).
  1. **WEEKLY TIMER** (initial setting value):
     The weekly timer can be used.
  2. **AUTO OFF TIMER**:
     The auto off timer can be used.
  3. **SIMPLE TIMER**:
     The simple timer can be used.
  4. **TIMER MODE OFF**:
     The timer mode cannot be used.

- When the use of clock setting is OFF, the “WEEKLY TIMER” cannot be used.

(4) Contact number setting for error situation

- To switch the setting, press the [ON/OFF] button.
  1. **CALL OFF**:
     The set contact numbers are not displayed in case of error.
  2. **CALL *** *** *****:
     The set contact numbers are displayed in case of error.
     CALL: The contact number can be set when the display is as shown on the left.

- Setting the contact numbers

  Move the flashing cursor to set numbers. Press the [TEMP (•) and (△)] button to move the cursor to the right (left). Press the [OLOCK (•) and (△)] button to set the numbers.

[4]-4. Display change setting

(1) Temperature display °C/°F setting

- To switch the setting, press the [ON/OFF] button.
  1. **°C**: The temperature unit °C is used.
  2. **°F**: The temperature unit °F is used.

(2) Suction air temperature display setting

- To switch the setting, press the [ON/OFF] button.
  1. **ON**: The suction air temperature is displayed.
  2. **OFF**: The suction air temperature is not displayed.

(3) Automatic cooling/heating display setting

- To switch the setting, press the [ON/OFF] button.
  1. **ON**: One of “Automatic cooling” and “Automatic heating” is displayed under the automatic mode is running.
  2. **OFF**: Only “Automatic” is displayed under the automatic mode.

7 Check

1. Turn on the power.
2. Press the [CHECK] button twice.
3. Set refrigerant address with [TEMP] button if system control is used.
4. Press the [ON/OFF] button to stop the self-check.

② Mount the cover to the lower case
③ Cross-section of upper hooks
Signal Recieving Unit

1) Sample system connection  
[Fig. 8-7]  
Only the wiring from the signal receiving unit and between the remote controllers is shown in [Fig. 8-7]. The wiring differs depending on the unit to be connected or the system to be used.  
For details on restrictions, refer to the installation manual or the service handbook that came with the unit.  
1. Connecting to Mr. SLIM air conditioner  
[Standard 1:1]  
① Connecting the signal receiving unit  
Connect the signal receiving unit to the CN90 (Connect to the wireless remote controller board) on the indoor unit using the supplied remote controller wire. Connect the signal receiving units to all the indoor units.  
2) How To Install  
[Fig. 8-8] to [Fig. 8-15]  
1. Common items for “Installation on the ceiling” and “Installation on the switch box or on the wall”  
[Fig. 8-8]  
① Signal receiving unit external  
② Center of Switch box  
③ Switch box  
④ Installation pitch  
[Fig. 8-9]  
① Remote controller wire  
② Hole (drill a hole on the ceiling to pass the remote controller wire.)  
③ Signal Receiving Unit  
(1) Select the installation site.  
The following must be observed.  
① Connect the signal receiving unit to the indoor unit with the supplied remote controller wire. Note that the length of the remote controller wire is 5 m (16 ft).  
① When installing on either the switch box or the wall, allow space around the Signal Receiving Unit as shown in the figure in [Fig. 8-8].  
② When installing the Signal Receiving Unit to the switch box, the Signal Receiving Unit slipped downward for 6.5 mm (1/4 inch) as right illustrated.  
③ Parts which must be supplied on site.  
Switch box for one unit  
Thin-copper wiring pipe  
Lock nut and bushing  
⑤ The thickness of the ceiling to which the remote controller is installed must be between 9 mm (3/8 inch) and 25 mm (1 inch).  
⑥ Install the unit on the ceiling or on the wall where the signal can be received from the wireless remote controller.  
The area where the signal from the wireless remote controller can be received is 45° and 7 m (22 ft) away from the front of the signal receiving unit.  
⑦ Install the signal receiving unit to the position depending on the indoor unit model.  
⑧ Connect the remote controller wire securely to the order wire. To pass the remote controller wire through the conduit, follow the procedure as shown in [Fig. 8-10].  
[Fig. 8-10]  
① Fix tightly with tape  
② Order wire  
③ Remote controller wire  
Note:  
- The point where the remote controller wire is connected differs depending on the indoor unit model.  
Take into account that the remote controller wire cannot be extended when selecting the installation site.  
- If the Signal Receiving Unit is installed near a fluorescent lamp specially inverter type, signal interception may occur.  
Be careful for installing the Signal Receiving Unit or replacing the lamp.  
(2) Use the remote controller wire to connect it to the connector (CN90) on the outdoor unit controller circuit board on the indoor unit.  
Refer to the 2) Setting the Pair Number Switch for details on controller circuit board on the indoor unit.  
(3) Seal the Signal Receiving Unit cord lead-in hole with putty in order to prevent the possible entry of dew, water droplets, cockroaches, other insects, etc.  
[Fig. 8-11]  
① 150 mm (5 - 1/16 inch)  
② Remote controller wire (Accessory)  
③ Wiring pipe  
④ Locknut  
⑤ Bushing  
⑥ Switch 1:1  
⑦ Seal around here with putty  
- When installing on the switch box, seal the connections between the switch box and wiring pipe with putty.  

Emergency Operation for Wireless Remote-controller

ON/OFF lamp  
(Lit when unit is operating; unlit when unit is not operating)  
Emergency operation  
In cases where the remote control unit does not operate properly, use either the COOL or HEAT button on the wireless remote control signal receiver to toggle the unit on or off. On cooler only units, pushing the HEAT button toggles the fan on and off.  
Pressing the COOL or HEAT button selects the following settings.
Descriptions

- Integrate the signal receiver in the corner panel (the opposite side of refrigerant piping).
- Applicable only for PLA-BA, BA2, BA3 models.

Applicable Models

- PLA-RP BA/BA2/BA3

How to Use / How to Install

1  Before installation  ※Turn off the main power before work.

● Open the intake grill and remove the corner panel where refrigerant pipes are and where local wires are drawn into.
※ The corner panel removed is not needed.
※ When attaching the duct flange during installation of decoration panel, perform the following work only after connecting the wires to the decoration panel:
● The control box cover fixed by 3 screws, which is possible to hang temporarily.
● Perform setting to designate the unit to be operated by the wireless remote control.
Set J41 and J42 (jumper wires) on the indoor controller board and pair number switch of the wireless remote control as follows:
● Setting pair number
● Up to 4 patterns of pair number can be set.
Match the pair number (setting of J41 and J42) of the indoor controller board and the pair number switch of wireless remote control as shown in the table below.
※ See the installation manual provided with the wireless remote control for details on setting method of the wireless remote control.

</tbody>
</table>

2  Installation of signal receiving unit.

● Pull out the cable of infrared receiver from the square hole in the corner of decoration panel, the portion of corner panel that was removed in step 1.
● Pass the cable through the three hooking portions of unit and electrical parts box as shown in the figure, adjust the length of cable so that the
● Slide the receiving unit in the ① direction as shown and fix it by the screw which is used for the corner panel removed.

● After the installation completed, set the control box cover as they were.
Enables the use of wireless remote controller for ceiling suspended models.

Applicable Models

- PCA-RP KA

How to Use / How to Install

1. Making Sure of Components

Make sure that the following components, along with this manual, are packed in the box.

<table>
<thead>
<tr>
<th>Component</th>
<th>Qty</th>
</tr>
</thead>
<tbody>
<tr>
<td>Wireless remote controller reciever</td>
<td>1</td>
</tr>
<tr>
<td>Wireless remote controller</td>
<td>1</td>
</tr>
<tr>
<td>Remote control holder</td>
<td>1</td>
</tr>
<tr>
<td>&quot;AAA&quot; LR03 alkaline batteries</td>
<td>2</td>
</tr>
<tr>
<td>4.1×16 wood screws</td>
<td>2</td>
</tr>
<tr>
<td>Cord retaining clips</td>
<td>2</td>
</tr>
<tr>
<td>Connection cord fixing seal (12×30 size)</td>
<td>1</td>
</tr>
</tbody>
</table>

2. How to Install

* Be sure to turn the power off before installing.

1. Removing the intake grille and the right side panel
   - Slide the catch holding the intake grille backwards to open the grille. Remove the screw holding the side panel, and then slide the side panel forward to remove it.

2. Removing the existing brand label case
   - Remove the brand label case (name plate with MITSUBISHI ELECTRIC) from the bottom right of the unit. If it is difficult to remove the case, use a flat-blade screwdriver, etc., taking care not to damage the panel.

3. Installing to the indoor unit
   - Pass the receiver board connector through the right side of the square hole to which the brand label case was attached and then pull the connector and cord through the slit in the right side of the bottom panel.
   - Fit the receiver into the square hole where the brand label case was attached.
Connecting the receiver board connector to the control circuit board

- Pass the cord through the bush at the top right of the electrical box.
- Connect the connector to CN90 on the right of the control board.
- If the cord is loose, bundle it using the clamps under the above bush.

Removing the beam and the electrical box cover

- Remove the beam.
- Loosen the two screws at the bottom of the electrical box cover, and then slide the cover to the left to remove it.
- Pull down the electrical box.

Reinstalling the removed components

- Reinstall the removed components in reverse order. (The brand lavel case is not needed.)

Remote control holder

- To install the wireless remote controller on a wall, first attach the remote control holder to a wall.

Fitting remote control into holder

1. Fix the remote control holder to the wall using the 2 wood screws provided.
2. Insert the remote control into the holder.
3. Push the remote control against the wall.

Removing remote control

- Pull the top of remote control forward.

NOTE: The remote signal will reach the receiver over a distance of approx. 7m in a straight line and approx. 45° left or right. If the infrared receiver is affected by fluorescent light (especially, inverter type), it may not be able to receive the signal. Take this into consideration when installing fluorescent lights or replacing them.
3 Pair Number Setting

- This is the setting to specify the unit to operate with the wireless remote controller.
- Make setting for J41, J42 (Jumper wire) of indoor controller board and the pair number of wireless remote controller.
- The pair number setting is available with the 4 patterns as shown in the following table. Make setting for the pair number (J41, J42) of indoor controller board and the pair number of wireless remote controller which is used as shown in the following table. *The initial setting is Pair No. "0".

- Press the SET button with something sharp at the end.
- Start this operation from the status of remote controller display turned off.
- Press the button twice continuously. Pair No. “0” blinks.
- Press the temp button to set the pair number you want to set.
- Press the SET button with something sharp at the end.
- Set pair number is lighted for 3 seconds then turned off.

<table>
<thead>

<td>Cut J41, J42</td>
</tr>
</tbody>
</table>

* The positions of the connectors may be different according to the model. Please refer to the wiring diagram to confirm the positions of the connectors.

4 Test Run

Measure an impedance between the power supply terminal block on the outdoor unit and the ground with a 500V Megger and check that it is equal to or greater than 1.0 MΩ.

- Turn on the main power to the unit.
- Press the button twice continuously. (Start this operation from the status of remote controller display turned off.)
- Press the button and current operation mode are displayed.
- Press the button to activate COOL mode, then check whether cool air is blown out from the unit.
- Press the button to activate HEAT mode, then check whether warm air is blown out from the unit.
- Press the button and check whether strong air is blown out from the unit.
- Press the button and check whether the auto vane operates properly.
- Press the ON/OFF button to stop the test run.

**NOTE:**
- Point the remote controller towards the indoor unit receiver while following steps ② to ⑦.
- It is not possible to run in FAN, DRY or AUTO mode.
Function Selection

Each function can be set according to necessity using the remote controller.

Select function available from the Table3. Function selection using wireless remote controller is available only for refrigerant system with wireless function. Refrigerant address cannot be specified by the wireless remote controller.

The article below describes how to set “LOSSNAY connectivity” into “supported (indoor unit is not equipped with outdoor-air intake)” in Table 3 as an example.

1. Go to the function select mode
   Press the button  twice continuously.
   (Start this operation from the status of remote controller display turned off.)
   CHECK is lighted and "00" blinks.
2. Setting the unit number
   Press the temp and to set the unit number "00".
   Direct the wireless remote controller toward the receiver of the indoor unit and press the button .
3. Selecting a mode
   Enter 03 to change the LOSSNAY connectivity setting using the and buttons.
   Direct the wireless remote controller toward the receiver of the indoor unit and press the button .
   - If a mode number that cannot be recognized by the unit is entered, 3 beeps (3 beeps of 0.4 seconds duration) will be heard.
   - Reenter the mode number selecting.
   - If the signal was not received by the sensor or an error occurred during transmission, you will not hear a beep or a “double beep” may be heard.
   Press the button again.

4. Selecting the setting number
   Use the and buttons to change the LOSSNAY connectivity setting to 02.
   Direct the wireless remote controller toward the sensor of the indoor unit and press the button .
   → At this time, current setting number for selected mode number will be output by the interrupted buzzer sounds and the blinks of operation indicator.
   Output : setting number = 1 → beep beep (0.4 second + 0.4 second) x 1
   = 2 → beep beep (0.4 second + 0.4 second) x 2
   = 3 → beep beep (0.4 second + 0.4 second) x 3
   - If a setting number that cannot be recognized by the unit is entered, 3 beeps (3 beeps of 0.4 seconds duration) will be heard (unit will beep only).
   - Reenter the setting number selecting.
   - If the signal was not received by the sensor or an error occurred during transmission, you will not hear a beep or a “double beep” may be heard.
   Press the button again.

5. To select multiple functions continuously
   Repeat steps 1 and 2 to change multipul function settings continuously.

6. Complete function selection
   Direct the wireless remote controller toward the sensor of the indoor unit and press the button .

NOTE : Whenever changes are made to the function settings after construction or maintenance, be sure to record the added functions with an “○”, in the “Check” column provided on the chart.
Other function selections

Now that you know how to change LOSSANY connectivity setting, there are several other settings that can be changed as well. The following table lists the various settings that can be changed through the remote controller and the default settings.

<table>

*1 Power failure automatic recovery initial setting depends on the connecting outdoor unit.

Things to remember when entering function selections:
The basic procedure for entering function selections is the same as described for switching between LOSSNAY connectivity. However, there are some differences at step 3 for selecting the unit number, step 5 for selecting the mode number and step 4 for selecting the setting number.
The following Tables 4 and 5 list the various function settings, mode numbers and setting numbers.
The Table 4 details the function of the entire refrigerant system while Table 5 shows the function that can be set for the indoor unit.

Table 4. Itemized functions of the entire refrigerant system (select unit number 00)

Things to remember when entering function selections:

- Setting the unit numbers
  Set "00" as the unit number when setting function from Table 4.
  When setting function from Table 5.
  - When setting function for an indoor unit in an independent system, set the unit number to 01.
  - When setting function for a simultaneous-Twin Triple quadruple indoor unit system, assign unit numbers from 01 to 04 to each indoor unit.
  - When setting the same functions for an entire simultaneous Twin Triple quadruple-indoor unit system, assign "07" as the unit number.
- Selecting the mode number
  Select from Table 4 and Table 5.
- Selecting the setting number.
6 Self-Check

1. Turn on the main power to the unit.
2. Press the CHECK button twice continuously.
   (Start this operation from the status of remote controller display turned off.)
3. «00» begins to blink.
4. While pointing the remote controller toward the unit's receiver, press the CHECK button. The check code will be indicated by the number of times that the buzzer sounds from the receiver section and the number of blinks of the operation lamp.
5. Press the ON/OFF button to stop the self-check.

- Refer to the following tables for details on the check codes.

How to Use / How to Install

Installation area

1) Installation area
- Area in which the remote controller is not exposed to direct sunshine.
- Area in which there is no nearby heating source.
- Area in which the remote controller is not exposed to cold (or hot) winds.
- Area in which the remote controller can be operated easily.
- Area in which the remote controller is beyond the reach of children.

2) Installation method
1) Attach the remote controller holder to the desired location using two tapping screws.
2) Place the lower end of the controller into the holder.
   - Remote controller
   - Wall
   - Display panel
   - Receiver
- The signal can travel up to approximately 7 meters (in a straight line) within 45 degrees to both right and left of the center line of the receiver.
### Remote Sensor

How to Use / How to Install

1 | How to Install

(1) Determine the installation of the remote sensor (switch box).

(a) Select a place where the remote sensor will detect an average temperature of the room, and where the sensor will not be subject to direct sunlight, heat sources, or the blow-off from the air conditioner, etc.

(b) Install the sensor within the length of the cable provided (12m). (The cable cannot be extended. If extended, it may cause malfunction due to noise.)

(c) The following parts must be procured at the site.

- Cross-recessed pan head screw
- M4 .... Tow screws
- Single switch box
- Thin steel conduit
- Lock nut, bushing

(2) Connect the wires.

- Connect the 2-core cable to the terminal block in the lower case. Peel the sheath of the 2-core cable as shown in Fig.1, and correctly wire as shown in Fig.2.

- The wiring connection of the indoor unit's electrical box and remote sensor is shown in Fig.3. There are three methods of connecting the 2-core cable to the electrical box.

- Exchanging 2-core cable (connector 20):
  - When using the connector attached to the end of the 2-core cable as it is.
  - When cutting the connector attached to the end of the 2-core cable and connecting the cable to the terminal block in the I.B. (Indoor Board).
  - When using the enclosed post for connection and convert cable.

- The above three methods are used according to the indoor unit being used. If the 2-core cable is to be embedded in the wall, follow Fig.4.

(3) Install the lower case on the wall or switch box.

- The recommended tightening torque for installing the 2-core cable to the terminal block is 1.17N-m.

- CAUTION: If the screws are tightened too hard, the case may break or deform.
- Install the sensor on a flat wall. If installed on a bumpy wall, the case may break or trouble may occur.

(4) Fit the upper case.

- Catch the two upper claws first, and fit the case as shown on the left.

- CAUTION: Securely fit the case until a catching sound is heard. It may drop off if it is not fitted securely.

- To remove the case, fit a flat-headed screwdriver into the claw section as shown below, and move the screwdriver in the direction of the arrow.

(5) Wiring hole for direction installation on wall, etc.

- Cut the thin section (shaded section) of the lower case with a knife or pair of nippers, etc. The 2-core cable connected to the terminal block is led out from here.

- Securely seal the wiring lead hole with putty or silicone to prevent dew, water drops, cockroaches and other insects from entering.

- When installing directly on the wall, seal the section cut on the lower case with putty or silicone.

- If the wiring is to be passed through a hole in the wall (when leading the wiring from the rear of the remote sensor), seal the hole in the same manner.

- When installing on a switch box, seal the connection of the switch box and conduit with putty or silicone.

2 | Setting of indoor unit

When the remote sensor is connected to the indoor unit and room temperature detection position is changed, reset the setting of "Set temp. 4-deg. up" in the heating mode as shown below:

- K control models: DIP switch Nos 1-6 on the control PCB of the indoor unit.
- M-NET control models: DIP switch Nos 3-4 on the control PCB of the indoor unit.
- A control models: Refer to A-control air-conditioners SERVICE TECHNICAL GUIDE.
Remote On/Off Adapter  
PAC-SE55RA-E

Figure

Descriptions

• Operation other than ON/OFF (adjustment of temperature, fan speed, and air direction, for example) can be performed even when remote controller operation is prohibited.

How to Use / How to Install

1 Connecting to the Indoor Unit
1. Connect to the connector CN32 on the indoor controller board.
2. Press the connector for the remote ON/OFF adapter into the CN32 connector.
   The connector can only be connected in one direction. Do not force the connection.

2 Locally Procured Wiring
With the remote ON/OFF adapter, variations of connection method with the locally installed circuit will provide different types of operating configurations.
Example: External timer operation, remote control operation
1. Basic Connection Method
   SW1 - Operating switch
   Performs operation/stopping of indoor unit.
   SW2 - Selecting switch
   For selecting whether the operation/stopping is to be performed by external circuit or remote control.*
   * Also includes system controller (central controller).
2. Switch Settings (Refer to table at right for details.)
   SW2 - If on:
   • Operation/stopping cannot be controlled from remote controller.
   • Other operations (such as temperature settings and changing fan speed) can be performed.
   • Operation/stopping can be performed by SW1.
   SW2 - If off:
   • Operations can be performed from remote controller.
   • Operation/stopping cannot be performed by SW1.

3 Examples of Usage
In either case, there is a 5 to 6 second delay from the time the operating command is sent until the unit operates.
1. To perform operation/stopping by only remote operation or external timer and to prohibit operation/stopping by the remote controller, use the following circuits:
   ![Circuit Diagram](Diagram 1)
   2. To perform operation/stopping by remote operation or external timer and allow operation/stopping by the remote controller, use the following circuits:
   ![Circuit Diagram](Diagram 2)
   3. To start operation by remote operation and then freely use remote controller, use the following circuit:
   ![Circuit Diagram](Diagram 3)
   4. To permit/prohibit the use of the remote controller by an external circuit:
   ![Circuit Diagram](Diagram 4)

4 Wiring Restrictions
Keep the length of wire from the circuit board of the indoor unit within 10 meters. Excessive length could cause improper operation.
Use a transistor relay when extending wiring such as remote wiring.
Remote Operation Adapter

Specifications

- **Power**: Supplied from indoor unit
- **External dimensions (mm)**: 160 x 70 x 30
- **Exterior Material**: ABS resin, Color: Gray (Munsell 3.07Y 6.16/0.33)
- **Weight**: 200g
- **Operating conditions**: Indoor only, Temperature: 0 to 40°C, Humidity: 35 to 85%RH (no condensation)
- **Connecting cable (indoor unit)**: 5-wire (3 + 2) cable with connector (9-pin, 4-pin)
- **Output signal**: No-voltage "a" contact (relay contact method)
  - Number of Contacts: 2 (Operation / Alarm)
  - Contact capacity: 200V AC (30V DC)/1A or less
  - Minimum load: 10mA
- **Input signal**: Pulse signal (instantaneous non-voltage "a" contact), pulse width: 200ms or more
  - Number of Contacts: 1 (start/stop)
- **Input/output signal cable (locally prepared)**: Type: CV, CVS, or equivalent sheathed vinyl cord/cable
  - Diameter: Twisted: 0.5 to 1.25mm², Single: Ø0.65 to Ø1.2mm
  - Distance: Output signal cable: Max. 100m
  - Input signal cable: Max. 10m (Extension relay must be used when exceeding 10m)

* This kit cannot be used with a wireless remote controller.
* Water leakage alarm will not be displayed if the unit is built into the ceiling (PDH)

* Use of optional [Remote Operation Adapter] and "remote display panel" Part to be provided at your site) provides non-voltage contact outputs of signals (operation, error) and operation/stop input function.

Applicable Models

- **SLZ-KA VA**
- **SEZ-KD VA**
- **PLA-RP BA(2)(3)**
- **PEAD-RP JA(L)**
- **PEA-RP200/250GA**

2. External Dimension Drawing

![Diagram showing dimensions and labels for installation]
3 Wiring

![Diagram of Wiring](image)

**Caution**

1. TB3 is a dedicated terminal for contact input. Do not apply voltage. Applying voltage will cause damage to the circuit board inside the remote unit controller.
2. Always use the cable provided for connecting the unit to the indoor unit. Never make modifications to extend this cable. Extensions could cause the cable to be affected by external noise which could lead to mis-operation. If an extension is needed, refer to specification chart in "3. Product Specifications". Follow it when extending the external signal wire.

<Connecting to the indoor unit>

① If external output functions are used: Insert the 9-electrode contact side of the cable provided into CN90 on the controller circuit board for the indoor unit.
② If external input functions are used: Insert the 4-electrode (2 core) side of the cable provided into CN41 on the controller circuit board for the indoor unit.

* The connector can only be inserted in one direction. Be sure to check that the connector is in the proper direction before inserting. Forcing the connector will cause damage.

4 How to Install

There are three ways to mount the remote operation adaptor main unit: [A] Using mounting bracket, [B] Mounting directly, and [C] Using the cushion material.

(1) Installation Example (Suspended Type)

![Installation Example Diagram](image)

**Caution**

1. When mounting the remote operation adaptor main unit, be sure to use the mounting hardware to mount it to a wall or beam so that an inspection port is available for servicing.
2. If there is any loose wire remaining after installation, use a tie-wrap to bundle it.
(2) Installation Example 2 [Cassette Type]

ΔCaution

1) When mounting the remote operation adapter main unit, be sure to use the mounting hardware to mount it to a wall or beam so that an inspection port is available for servicing.
2) If there is any loose remaining wire after installation, use a tie-wrap to bundle it.
Figure

• This adapter enables control of several units with a multiple remote control display.

MULTIPLE REMOTE CONTROL DISPLAY

You can control several units with a multiple remote control display, by wiring an optional multiple remote controller adapter (PAC-SA88HA-E) with relays and lamps on the market.

How to wire

1. Connect the multiple remote controller adapter to the connector CN51 on the indoor controller board.
2. Wire three of the five wires from the multiple remote controller adapter as shown in the figure below.

#### Pipe connections

**Combination pattern of indoor and outdoor units and joints to be used**

(Fig. 2)

1. Perform work, taking care with the followings:
   - Be sure to check the combination pattern of indoor and outdoor units and joints to be used (Table 2).
   - Be sure to observe the limits to refrigerant pipe length and number of bends (Table 1).
   - Insert the refrigerant pipe (procured at local site) and joint into the expanded pipe portions of distributing pipe (this product) until they stop, and then connect them using anti-oxidation soldering.
   - Take care that no foreign object, such as dust, enters during pipe connecting work.
   - Remove the tag of liquid pipe after checking it.

2. Pipe connections
   - The provided joints will be necessary depending on the capability of model used: See (Table 2), and connect the joints as shown in (Fig. 2).
   - Do not bend or widen the distributing pipe (liquid pipe).

#### Heat insulation work

- Wrap margin (Note 2) Tape (procured at local site)
- Insulation material (procured at local site) (Note 1)
- Pipe cover
- Pipe from local site

- Fit gas pipe into pipe covers, and then seal the mated portion of pipe covers using heat insulation seal tape (procured at local site).
- Process liquid pipe in the same way.

Notes:
1. Cover the entire refrigerant pipe (procured at local site) with heat insulation material. When using generally available heat insulation material, heat-resistant insulation material (at least 12 mm thick).
2. Pipe covers will shrink slightly at high temperatures: Provide wrap margins with insulation material.

Please install contents other than this description on the main part of a product with an attached installation description, and use them as it.

Pipe connections

Combination pattern of indoor and outdoor units and joints to be used:

1. Perform work, taking care with the followings:
   - Be sure to check the combination pattern of indoor and outdoor units and joints to be used (Table 2).
   - Be sure to observe the limits to refrigerant pipe length and number of bends (Table 1).
   - Insert the refrigerant pipe (procured at local site) and joint into the expanded pipe portions of distributing pipe until they stop, and then connect them using anti-oxidation soldering.
   - There is no restriction on the orientation of distributing pipe (this product) during installation.
   - Take care that no foreign object, such as dust, enters during pipe connecting work.
   - Remove the tag of liquid pipe after checking it.
2. Pipe connections:
   - The provided joints will be necessary depending on the capability of model used: See (Table 2), and connect the joints as shown in (Fig. 2).
   - Do not bend or widen the distributing pipe (liquid pipe).

Heat insulation work

- **Wrap margin (Note 2)**
  - Tape (procured at local site)
  - Insulation material (procured at local site) (Note 1)

- **Pipe cover (8)**
  - Fit gas pipe into pipe covers, and then seal the mated portion of pipe covers using heat insulation seal tape (procured at local site).
  - Process liquid pipe in the same way.

Please install contents other than this description on the main part of a product with an attached installation description, and use them as it.

How to Use / How to Install

Package Air-conditioner Optional Parts Instruction Sheet for Simultaneous Triple Distributing Pipe exclusively used with Free Compo Multi-Units

MSDT-111R-E (Indoor unit same-capacity triple 33:33:33) ………………… Outdoor unit PUH(R)-P6, 140GA type (R407C fixed speed)
Outdoor unit PUHZ-RP6, 140HA type (R410A power inverter)
Outdoor unit PUH-PS-10, 200→250HA type (R407C fixed speed)
Outdoor unit PUHP-PS-10, 200→250HA type (R410A power inverter)

Make sure that you have all the following parts in packing box before beginning installation:

Instructions sheet 1 sheet
Gas pipe 1pc
Liquid pipe 1pc
Pipe cover (for gas pipe) 3pc
Pipe cover (for liquid pipe) 3pc
Bands 3pcs
Joint 2 pcs
Flare nut 3pcs

Note 1: See the following for the specifications of gas pipe and liquid pipe.

Pipe size and limit to refrigerant pipe

For R407C fixed speed models

Pipe size (mm) Actual pipe length (m) Height Difference (m) Number of bands
Outdoor unit capacity Gas pipe side Outer unit side Indoor unit side Outer unit side Indoor unit side Indoor-Outdoor Indoor-Outdoor
140 (250) => Ø15.88 (9/32) Ø12.7 (1/2) 15.82 (5/8) — 50m or less 9.52 (3/8) 75m or less B = C = D = — 8m or less h = 40m or less h = 1m or less 15 or less
200 (320) => Ø15.88 (9/32) Ø12.7 (1/2) 15.82 (5/8) — 50m or less 9.52 (3/8) 75m or less B = C = D = — 8m or less h = 40m or less h = 1m or less 15 or less

For R410A Power Inverter models

Pipe size (mm) Actual pipe length (m) Height Difference (m) Number of bands
Outdoor unit capacity Gas pipe side Outer unit side Indoor unit side Outer unit side Indoor unit side Indoor-Outdoor Indoor-Outdoor
140 (250) => Ø22.2 (7/8) Ø18.3 (3/4) 15.82 (5/8) — 50m or less 9.52 (3/8) 75m or less B = C = D = — 8m or less h = 40m or less h = 1m or less 15 or less
200 (320) => Ø22.2 (7/8) Ø18.3 (3/4) 15.82 (5/8) — 50m or less 9.52 (3/8) 75m or less B = C = D = — 8m or less h = 40m or less h = 1m or less 15 or less

Pipe connections

1. Perform work, taking care with the following:
   - Be sure to check the combination pattern of indoor and outdoor units, joints to be used (Table 3-1), pipe size (Table 1), and joint used (3).
   - Be sure to observe the limits to refrigerant pipe length and number of bands (Table 2).
   - Insert the refrigerant pipe (procured at local site), joint into the expanded pipe port of the distributing pipe (the product) until they stop, and then connect them using anti-corrosion insulating.
   - Take care that no foreign object, such as dust, enters during pipe connecting work.
   - Remove the tag of liquid pipe (3) after checking it.

2. Pipe connections
   - The provided joints (1) will be necessary depending on the capability of model used. See (Table 3-3), and connect the refrigerant piping.
   - Do not bend or widen the distributing pipe (liquid pipe).

Combination pattern of indoor and outdoor units and joints to be used:

For R407C fixed speed (Table 3-1)

Outdoor unit Indoor unit Indoor-outdoor Indoor-outdoor Outdoor unit O-ring O-ring
140 (250) Outer Ø22.2 — Inner Ø18.3 (3/4) Outer Ø22.2 — Inner Ø18.3 (3/4)
200 (320) Outer Ø22.2 — Inner Ø18.3 (3/4) Outer Ø22.2 — Inner Ø18.3 (3/4)

For R410A Power Inverter (Table 3-2)

Outdoor unit Indoor unit Indoor-outdoor Indoor-outdoor Outdoor unit O-ring O-ring
140 (250) Outer Ø22.2 — Inner Ø18.3 (3/4) Outer Ø22.2 — Inner Ø18.3 (3/4)
200 (320) Outer Ø22.2 — Inner Ø18.3 (3/4) Outer Ø22.2 — Inner Ø18.3 (3/4)

Installation positions in brackets ( ).

Heat insulation work

1. Wind pipe covers (5) and (6) round gas pipe (2) so that there is no gap. Securely fit the valve parts of pipe cover (8) into the roots of pipe on both sides to install the pipe cover.
2. Completely seal the openings of pipe covers (5) and (6) using heat insulation seal tape (procured at local site). Wind seal tape round the pipe crossing portion in a crossed way so that there is no gap.
3. Use band (9) to tighten the ends of each pipe cover.

1. Fit liquid pipe (3) into 2 pipe covers (4) and then seal the welded portion of pipe covers (4) using heat insulation seal tape (procured at local site).
2. Fit pipe covers (5) and (6) onto liquid pipe (3), and then securely seal the welded portion of pipe covers (5) using heat insulation seal tape (procured at local site).
3. Use band (9) to tighten the ends of each pipe cover.

Notes:
1. Cut off any surplus pipe cover to make appropriate length.
2. Use pipe covers to completely cover the connection portion of refrigerant pipe (procured at local site), gas pipe (2) and liquid pipe (3).
3. Cover the entire refrigerant pipe (procured at local site) with heat insulation material. When using generally available heat insulation material, make sure it is heat-resistant insulation material (at least 12 mm thick).

Please install contents other than this description on the main part of a product with an attached installation description, and use them as it.

<td>1</td>
<td></td>
</tr>
</tbody>
</table>

Note 1: The number of bends in the refrigerant pipe is respectively 8 or less in the range of (A + D) (A + C) (A + D) (A + E).

### Pipe connections

1. Perform work, taking care with the following:
   - Be sure to check the combination pattern of indoor and outdoor units, joints to be used (Table 1), pipe size, and joint used (3). Be sure to observe the limits to refrigerant pipe length and number of bends (Table 1).
   - Insert the refrigerant pipe (procured at local site) and joint (5) into the expanded pipe portions of distributing pipe (this product) until they stop, and then connect them using anti-oxidation soldering.
   - There is no restriction on the orientation of distributing pipe (this product) during installation.
   - Take care that no foreign object, such as dust, enters during pipe connecting work.
   - There is no restriction on the orientation of distributing pipe (this product) during installation.
   - Remove the tag of liquid pipe (obtained locally).
   - The gas pipe (prepared by site) will be necessary depending on the capability of model used: See (prepared by site).

2. Pipe connections

   - The provided joints (3) will be necessary depending on the capability of model used: See (Table 1), and connect the refrigerant piping.
   - Do not bend or widen the distributing pipe (liquid pipe).
   - Combination pattern of indoor and outdoor units and joints to be used:

### Heat insulation work

1. After assembling header 2 into pipe cover 4, remove the release paper from inside pipe cover 4 and wrap header 2 with pipe cover 4.
2. Clamp both ends of the header with connection pipe of pipe cover 4 with band 8.
3. Cut off the excess length of the band.
4. Tightly seal the joints of the pipe cover with tape locally purchased. (Complete sealing can result in cold condensation.)

### Notes

1. Cut the excessive part of each pipe cover.
2. Securely cover the joint areas (3) of the refrigerant pipe (obtained locally) to the gas pipes 2 and liquid pipes 3 with the pipe covers.
3. Cover the entire refrigerant pipe (obtained locally) with heat insulation material. If commercial heat insulation material is used, it must be 12mm or thicker.

How to Use / How to Install

2-BRANCH PIPE (JOINT) (MSDD--50AR--E)

The kit contains the following:

- Manual
- Liquid pipe (small: 9.52)
- Gas pipe (large: 15.88)
- Heat-insulation cover (small)
- Heat-insulation cover (large)

During installation, be careful about the following:

1. Note the limit length of the refrigerant pipe refer to the installation manual of outdoor unit and branch box.
2. Note the limit for installing the indoor units refer to the installation manual of outdoor unit and branch box.
3. In connecting pipes, take care not to let any dirt or other foreign matter enter any pipe.
4. Put a heat insulator into every refrigerant pipe.

Outline of system and pipe size

Installation direction of joint

- Horizontal direction
- Vertical direction

Installing Heat Insulation Cover and Heat Insulators

- The liquid pipe (small: 9.52): Make it fit the heat-insulation cover (small).
- Seal the mating of the heat-insulation cover with the tape for sealing heat insulators (to be locally procured).
- Do the same with the gas pipe (large: 15.88), using the heat-insulation cover (large), as with the liquid pipe (small).

Note 1: Install a heat insulator on every part of the refrigerant pipes (to be locally procured).
- If you want to use commercially-available heat insulators, use heat-resistant heat insulators (at least 12mm thick).

Note 2: The pipe covers shrink a little under high heat.
- Therefore, allow for some wrapping margin in the heat insulators.
**Photo**

**Descriptions**

For double-branching of the refrigerant piping to connect 2 branch boxes. (Brazing type)

**Applicable Models**

- MXZ-8A140VA
- PAC-AK30BC
- PAC-AK50BC

**Dimensions**

Unit: mm

**LIQUID PIPE**

- ID: 9.52 (To outdoor unit)
- ID: 15.88 (To Branch box)

**GAS PIPE**

- ID: 15.88 (To outdoor unit)
- ID: 15.88 (To Branch box)
How to Use / How to Install

2-BRANCH PIPE(JOINT) (MSDD-50BR-E)

The kit contains followings

<table>
<thead>
<tr>
<th>□ Manual</th>
<th>□ Liquid pipe (small: Ø 9.52)</th>
<th>□ Gas pipe (larger: Ø 15.88)</th>
<th>□ Heat-insulation cover(small)</th>
<th>□ Heat-insulation cover(large)</th>
<th>□ Pipe (Gas pipe use: Ø 15.88 ● Ø 19.05)</th>
</tr>
</thead>
<tbody>
<tr>
<td>This one-sheet manual</td>
<td>X1</td>
<td>X1</td>
<td>X1</td>
<td>X1</td>
<td>X3</td>
</tr>
</tbody>
</table>

During installation, be careful about the followings

1. Note the limit length of the refrigerant pipe refer to the installation manual of outdoor unit and branch box.
2. Note the limits for installing the indoor units refer to the installation manual of outdoor unit and branch box.
3. Use solder in connecting any branch joint with any piping system or with the pipe. Insoldering, use oxygen-free solder.
4. Each branch joint has a stopper.
5. In connecting any pipe to any branch joint, thrust the pipe home till it clicks.
6. Put a heat insulator into every refrigerant pipe.

Outline of system and pipe size

Outdoor unit: R410A type (MXZ-8A140VA)

- Liquid(mm): Ø 9.52
- Gas(mm): Ø 15.88

Refer to installation manual of outdoor unit and branch box

See the following for the specifications of liquid pipe, and gas pipe

When outdoor unit is R22 type (MXZ-7A140VC), please connect three pipe ● to Gas pipe ● according to Fig.1.

Installation direction of joint

Horizontal direction

- Within 30°

Vertical direction

- Within 15°

Installing Heat Insulation Cover and Heat Insulators

- The liquid pipe (small) Make it fit the heat-insulation cover (small).
- Seal the mating of the heat-insulation cover with the tape for sealing heat insulators (to be locally procured).
- Do the same with the gas pipe (large), using the heat-insulation cover (large), as with the liquid pipe (small).

Note 1: Install a heat insulator on every part of the refrigerant pipes (to be locally procured).
If you want to use commercially-available heat insulators, use heat-resistant heat insulators (at least 12mm thick).

Note 2: The pipe covers shrinks a little under high heat.
Therefore, allow for some wrapping margin in the heat insulators.
A part to connect refrigerant pipes of the different diameter. (Unit 6.35 → 9.52)

### Applicable Models
- PUHZ-RP
- PUHZ-HRP
- PUHZ-P

### Specifications
- **Pipe diameter**: 6.35
- **Pipe material**: C 12201 - OL

### Dimensions
- Unit: mm (inch)

### How to Use / How to Install

**Make sure that you have all the following parts, in addition to this manual in this box:**

**Joint Pipe**
- PAC-SG72RJ-E (unit side: 6.35 diameter, onsite pipe side: 9.52 diameter)
- PAC-SG73RJ-E (unit side: 9.52 diameter, onsite pipe side: 12.70 diameter)
- PAC-SG74RJ-E (unit side: 12.70 diameter, onsite pipe side: 15.88 diameter)
- PAC-SG75RJ-E (unit side: 15.88 diameter, onsite pipe side: 19.05 diameter)

**How to Use / How to Install**

1. **Apply flare processing** to onsite pipes to adapt to R410A, according to the table on the right. Use optional accessory flare nut at this time.
   - Check the installation manual attached to the outdoor unit for advisability on whether or not onsite (existing) pipes can be used.
   - When pipe of 19.05 diameter is used, be sure to turn ON the SW8-1 on outdoor unit control board.

2. **Remove caps (both ends)** for protection against mixing of foreign materials from optional part, and thinly apply refrigerant oil (locally procured) on flare surface.

3. **Securely tighten flare nut using torque wrench** according to the table on the right. (Proper tightening torque using torque wrench)

4. **After refrigerant pipe is connected**, be sure to perform gas leakage inspection for onsite connection pipes (including this optional part) and indoor/outdoor unit.

5. **Heat insulation is necessary** for this optional part: Wrap heat insulator (locally procured) around the onsite pipes and also the optional part (for dewdrop dripping prevention).

6. **Perform test run** according to the installation manual of the unit, making sure to also perform operation check.
A part to connect refrigerant pipes of the different diameter.
(Unit φ9.52 → φ12.7)

**Applicable Models**
- PUHZ-RP
- PUHZ-P
- PUHZ-HRP

**How to Use / How to Install**

Make sure that you have all the following parts, in addition to this manual in this box:

- Install the optional part securely using torque wrench according to the table on the right.
- After refrigerant pipe is connected, be sure to perform gas leakage inspection for onsite connection pipes (including this optional part) and indoor/outdoor unit.
- Heat insulation is necessary for this optional part: Wrap heat insulator (locally procured) around the onsite pipes and also the optional part (for dewdrop dripping prevention).

1) Apply flare processing to onsite pipes to adapt to R410A, according to the table on the right. Use optional accessory flare nut at this time.
Check the installation manual attached to the outdoor unit for advisability on whether or not onsite (existing) pipes can be used.
When pipe of 19.05 diameter is used, be sure to turn ON the SW8-1 on outdoor unit control board.

2) Remove caps (both ends) for protection against mixing of foreign materials from optional part, and thinly apply refrigerant or oil (locally procured) on flare surface.

- Refrigerator oil application point
  - Apply refrigerator oil to entire circumference of flare sheet surface.
  - Refrigerator oil application point
  - Do not apply to thread section. (If applied to threads, flare nut can easily be loosened.)

3) Securely tighten flare nut using torque wrench according to the table on the right.

## Descriptions

A part to connect refrigerant pipes of the different diameter.

(Unit φ15.88 → φ19.05)

## How to Use / How to Install

Make sure that you have all the following parts, in addition to this manual in this box:

1. Joint Pipe
   - PAC-SG72RJ-E (unit side: φ6.35 diameter, onsite pipe side: φ9.52 diameter)
   - PAC-SG73RJ-E (unit side: φ9.52 diameter, onsite pipe side: φ12.70 diameter)
   - PAC-SG74RJ-E (unit side: φ12.70 diameter, onsite pipe side: φ15.88 diameter)
   - PAC-SG75RJ-E (unit side: φ15.88 diameter, onsite pipe side: φ19.05 diameter)

2. Install the joint pipe (carefully read the following before installing.)
   - This optional part is used to connect indoor/outdoor unit to onsite pipes of different diameters.
   - When installing this optional part, be sure to read "Refrigerant pipe connection" in the installation manual attached to outdoor unit.

3. When flare processing for refrigerant R410A is applied using current tool, refer to the table above. B size can be secured using copper pipe gauge for margin adjustment.

4. After refrigerant pipe is connected, be sure to perform gas leakage inspection for onsite connection pipes (including this optional part) and indoor/outdoor unit.

5. Heat insulation is necessary for this optional part: Wrap heat insulator (locally procured) around the onsite pipes and also the optional part (for dewdrop dripping prevention).

6. Perform test run according to the installation manual of the unit, making sure to also perform operation check.

## How to Use

1. Apply flare processing to onsite pipes to adapt to R410A, according to the table on the right. Use optional accessory flare nut at this time.
   - Check the installation manual attached to the outdoor unit for advisability on whether or not onsite (existing) pipes can be used.
   - When pipe of 19.05 diameter is used, be sure to turn ON the SW8-1 on outdoor unit control board.

2. Remove caps (both ends) for protection against mixing of foreign materials from optional part, and thinly apply refrigerant or oil (locally procured) on flare surface.

3. Securely tighten flare nut using torque wrench according to the table on the right. (Proper tightening torque using torque wrench)

4. After refrigerant pipe is connected, be sure to perform gas leakage inspection for onsite connection pipes (including this optional part) and indoor/outdoor unit.

5. Heat insulation is necessary for this optional part: Wrap heat insulator (locally procured) around the onsite pipes and also the optional part (for dewdrop dripping prevention).

6. Perform test run according to the installation manual of the unit, making sure to also perform operation check.

---

Copper pipe

Do not apply to thread section.

(If applied to threads, flare nut can easily be loosened.)

Refrigerator oil application point

- Apply refrigerator oil to entire circumference of flare sheet surface.

How to Use / How to Install

Make sure that you have all the following parts, in addition to this manual in this box:

1) Apply flare processing to onsite pipes to adapt to R410A, according to the table on the right. Use optional accessory flare nut at this time.
2) Remove caps (both ends) for protection against mixing of foreign materials from optional part, and thinly apply refrigerant oil (locally procured) on flare surface.
3) Securely tighten flare nut using torque wrench to the table on the right.
4) After refrigerant pipe is connected, be sure to perform gas leakage inspection for onsite connection pipes (including this optional part) and indoor/outdoor unit.
5) Heat insulation is necessary for this optional part: Wrap heat insulator (locally procured) around the onsite pipes and also the optional part (for dewdrop dripping prevention).
6) Perform test run according to the installation manual of the unit, making sure to also perform operation check.

**How to Use / How to Install**

Make sure that you have all the following parts, in addition to this manual in this box:

1) Apply flare processing to onsite pipes to adapt to R410A, according to the table on the right. Use optional accessory flare nut at this time.

2) Remove caps (both ends) for protection against mixing of foreign materials from optional part, and thinly apply refrigerant or oil (locally procured) on flare surface.

3) Securely tighten flare nut using torque wrench according to the table on the right.

4) After refrigerant pipe is connected, be sure to perform gas leakage inspection for onsite connection pipes (including this optional part) and indoor/outdoor unit.

5) Heat insulation is necessary for this optional part: Wrap heat insulator (locally procured) around the onsite pipes and also the optional part (for dewdrop dripping prevention).

6) Perform test run according to the installation manual of the unit, making sure to also perform operation check.

**How to Use / How to Install**

Make sure that you have all the following parts, in addition to this manual in this box:

1. Remove caps (both ends) for protection against mixing of foreign materials from optional part, and thinly apply refrigerator oil (locally procured) on flare surface.
2. Securely tighten flare nut using torque wrench according to the table on the right.
3. After refrigerant pipe is connected, be sure to perform gas leakage inspection for onsite connection pipes (including this optional part) and indoor/outdoor unit.
4. Heat insulation is necessary for this optional part: Wrap heat insulator (locally procured) around the onsite pipes and also the optional part (for dewdrop dripping prevention).
5. Perform test run according to the installation manual of the unit, making sure to also perform operation check.

**Installation procedure**

(carefully read the following before installing.)

Check the installation manual attached to the outdoor unit for advisability on whether or not onsite (existing) pipes can be used.

- Refrigerant pipe connection” in the installation manual attached to outdoor unit.

**Installation procedure**

(carefully read the following before installing.)

This optional part is used to connect indoor/outdoor unit to onsite pipes of different diameters.

When installing this optional part, be sure to read “Refrigerant pipe connection” in the installation manual attached to outdoor unit.

Apply flare processing to onsite pipes to adapt to R410A, according to the table on the right. Use optional accessory flare nut at this time.

- Refrigerator oil application point

Installation Procedures (carefully read the following before installation.)

Cautions:
1) This optional part is used to remove moisture within refrigerant pipe to prevent compressor failures. However, if too much impurity inside refrigerant cycle has accumulated, such as amount of mixed moisture, dryer must be replaced after one season elapses. (Amount of allowable moisture absorption: 3 – 7 cc)
2) Install the filter dryer to refrigerant pipe mid way on liquid side.
3) Filter dryer can be installed outside of the unit. Installation inside the unit is possible only when installation space can be secured.

1 Preparation for installation

In the following parts, the installation for PUHZ-RP3VHA is highlighted as a representative.

- 1) Refer to the installation manual of the unit for procedure of refrigerant piping and vacuuming, etc.
  - Remove the panel from outdoor unit. (See Fig. 1.)
- 2) Removing the panel
  - Remove the service panel, front pipe cover and back pipe cover.
  - Remove back pipe cover only when taking it from back pipe.
- 3) Pipe connection
  - When bending pipe, take bending R (R100 ~ R150) just enough, and take care that pipe does not fold.
  - Apply pipe processing without touching compressor. (If the pipe touches, it may cause abnormal sound or vibration.)
  - Apply flare processing to connection pipe, arranging this on site.
  - Thinly apply refrigerator oil (locally procured) to flare sheet surface.

</tr>
</tbody>
</table>

Installation Procedures (carefully read the following before installing)

Cautions
1) This optional part is used to remove moisture inside the refrigerant pipe and prevent fault of compressor. However, if there is excessive contamination inside the refrigerant cycle, such as a large amount of mixed moisture, etc., the dryer must be replaced after it is used during one season (the amount of allowable moisture absorption: 3-7 cc).
2) Install the filter dryer to refrigerant pipe midway on liquid side, using flare connection.
3) The filter dryer can be attached outside the unit. It can also be attached to the inside of unit only if the space for installation can be secured.

1 Preparations for Installation

i) Refer to the installation manual of outdoor unit for the procedures of removing outdoor unit panel, refrigerant piping, vacuuming, etc.
ii) Connecting pipes
   * When bending pipe, allow enough bending R (R100-150), and take care that the pipe is not folded.
   * Lay out the pipe so that it does not come into contact with the compressor. (Being in contact could cause abnormal sound or vibrations.)
   * Apply flare processing to the connection pipe procured at local site.
   * Thinly coat the flare sheet surface with refrigerant oil (procured at local site).

2 Installing Filter Dryer

i) When installing the filter dryer inside the unit, refer to Fig. 1 or Fig. 2 according to the space in unit and install it. If there is no space for the dryer to be installed in unit, install it outside the unit (see Fig. 3).

Adjust the pipe attachment orientation, taking care with the position of knockout hole in the bottom of outdoor unit.
Perform test run according to the installation manual of unit, and be sure to execute gas leakage check and operation check.

The attachment of filter dryer is now complete. Reattach the service panels, etc. to the original position.

Test Run

i) Perform test run according to the installation manual of unit, and be sure to execute gas leakage check and operation check.

- SCREW (5 x 12) 20 pcs
- WASHER (insulated) 8 pcs
- HANGER 2 pcs
- INSTALLATION PROCEDURE

This sheet 1 sheet

Installation:

1. Install hanger bolts to match with the holes on the Branch Box (and the outer cover).
2. Put a nut (to be locally purchased) and a WASHER to the each hanger bolts.
3. Fix the TOP COVER to the hanger bolts with WASHERs and nuts. [fig. 2]
4. Put one insulated WASHER each (which come with the Branch Box) to 4 hanger bolts. [fig. 3]
5. Put one WASHER and one nut each (which come with the Branch Box) to 2 hanger bolts either at front side or back side. [fig. 3]
6. Hook two LEGs on the pre-fixed WASHERs and nuts first. Then insert hanger bolts to two LEGs on the opposite side and fix them with WASHERs and nuts (which come with the Branch Box). [fig. 4]
7. Install pipings and wirings etc, following the installation manual of the Branch Box.
8. Make sure that all 16 nuts are tightly fixed.

Make sure that all 20 SCREWS are tightly fixed.
A part for changing the air direction from outdoor unit. Can also be used to prevent short cycles.

How to Use / How to Install

Selecting the installation location

• To select a location for installation, refer to "Selecting the installation location" in the installation manual included with the unit.

1. Preparations before installation to the unit

(Depending on the size of the outdoor unit, the locations for the screw holes are different.)

For 800(W)x550(H)x285(D) outdoor units
• Remove the front panel from the outdoor unit.
• Drill Ø4.0mm screw holes in the front panel at the 4 locations shown on the right.
  (Be sure to remove the front panel before drilling the holes. Otherwise, the heat exchanger and electrical components could be damaged if the drill bit travels too far into the unit.)

For 710(W)x540(H)x255(D) outdoor units
• Remove the front panel from the outdoor unit.
• Drill Ø4.0mm screw holes in the front panel at the 4 locations shown on the right.
  (Be sure to remove the front panel before drilling the holes. Otherwise, the heat exchanger and electrical components could be damaged if the drill bit travels too far into the unit.)
For 800(W)x600(H)x300(D) outdoor units
• Remove the front panel from the outdoor unit.
• Drill Ø4.0mm screw holes in the front panel at the 4 locations shown at the right.
(Be sure to remove the front panel before drilling the holes. Otherwise, the heat exchanger and electrical components could be damaged if the drill bit travels too far into the unit).

For 684(W)x540(H)x255(D) outdoor units
• Peel off the trademark.
• Remove the front panel from the outdoor unit.
• Drill Ø4.0mm screw holes in the front panel at the 4 locations shown at the right.
(Be sure to remove the front panel before drilling the holes. Otherwise, the heat exchanger and electrical components could be damaged if the drill bit travels too far into the unit).

### 2. Installation to the unit

• Install the front panel to the outdoor unit.
• Install the air outlet guide to the outdoor unit using the 4 included screws.*
  (Install the guide so that the air will be directed upward.)
• Affix the trademark (for 684(W)x540(H)x255(D) outdoor units).
  Affix the included trademark at the location of the stamped marks shown at the right.

**Note**

• Be sure to securely tighten the screws. Otherwise, a chattering sound could be produced due to vibration if the screws are loose.

How to Use / How to Install

1) Remove 4 fixing screws of the grille. Note) Do not remove the grille.

2) Insert the support A between the product and the grille, and reinstall the screws that removed in 1). Note) Support A for right side and left side are identical with each other. The side which has 2 holes should face the product, and the other side which has 3 holes faces the outside.

3) Fix the support B to the support A with 3 screws (5×10) on each right and left side.

4) Fix the air outlet guide to the support B with 4 screws 5×10. The directions of the air outlet can be selected from 4 directions, up, down, left, and right. Choose the appropriate direction according to the installation environment.

CAUTION

* Air Guide prevents reverse rotation of outdoor unit fan when it enters low speed rotation mode with fan controller being operated. It is also used for protection of fan when strong winds, such as a typhoon, wind blowing through tall buildings, etc., directly strike the air outlet. In addition, installation of this product is necessary when cooling operation is to be performed in outdoor temperature of -5°C or lower (down to -15°C).

Note the followings when installing this guide:
1) Be sure not to use “upward discharge” in a place where snowing is possible. Snow may accumulate in the guard, which could damage the fan, etc.
2) Attaching this unit will decrease the performance (by 2-3%) and increase noise from outdoor unit (by approx. 1-2 dB).
3) Do not use “upward discharge” when there are any obstacles at the back and on both sides of outdoor unit (air is taken in from top of unit). This could cause a short cycle.
4) To eliminate the influence of external wind, be sure to install the unit with its back facing to wall.
5) Do not install this unit in a place where wind directly blows to the back of the unit.
### How to Use / How to Install

Note that two sets of this product are necessary for RP100, RP125, RP140.

#### 2 Checking Installation Space

(In the following diagrams, dimensions in parentheses are for RP4 and higher number models. Dimensions not in parentheses are common for all series models. Unit: mm)

1) Surrounding space needed when installing one unit
   - Do not use "upward discharge" in cases of figures (3) and (5) below.

1) Obstacle at front (open at back, sides and top)
2) Obstacles at back and front (open at sides and top)
3) Obstacles at back and top (open at front and sides)
4) Obstacles at back, and sides (open at front and top)
5) Obstacles at back, sides and top (open at front)

2) Surrounding space needed when installing multiple units
   - When installing units horizontally in a series, leave at least 350 mm space between units for 56-type or lower models, and at least 10 mm for 63-type or higher models.
   - Do not use "upward discharge" in case of figure (3) below.

1) Obstacle at front (open at back, sides and top)
2) Obstacles at back and front (open at sides and top)
3) Obstacles at back and top (open at front and sides)
4) Installing units, one in each row
5) Installing multiple units in multiple rows

- Limit of 3 units can be installed horizontally in series. When installing a larger number of units, maintain the space between units shown above.

- Keep at least 1000 (2000) when using discharge guide in directions other than "upward discharge".

- Keep at least 2000 (3000) when using discharge guide in directions other than "upward discharge".
### Installation Complete Diagrams

![Diagrams of air outlet guide and fan guard for different models.](image)

### Installation Method

For RP1.6 or 2:
1. Fix the two supports (2) and two supports (3), using four screws (5) to make a frame.
2. Attach the assembled supports to the outdoor unit using four screws (5), and then attach blowout guide (1) to the support (2), using four screws (4).
   - Four blowout directions can be selected: Check the orientation of blowout vane, and attach the blowout guide in the direction that matches the situation at local site.

For RP2.5 - 6: (Two sets of support and blowout guide are necessary for two-fan type models.)
1. Remove the 4 screws that hold the existing fan guard.
2. Fit the 4 spacers into the hole in fan guard, and then use the 4 screws to install the provided blowout guide to the outdoor unit above the existing fan guard.
   - The four blowout directions can be selected: Check the orientation of blowout vane, and install the blowout guide in the direction that matches the circumstance at local site. (Two sets of fan guide are necessary for RP4 and higher models.)

<td><img src="image4.png" alt="Washer" /></td>
<td><img src="image5.png" alt="Spring washer" /></td>
</tr>
</tbody>
</table>

### 2 Checking Installation Space (Unit: mm)

Secure the necessary surrounding space shown below and select a place with less obstacles, to prevent a short cycle.

1) Surrounding space needed when installing one unit

- Do not use “upward discharge” in cases of figures (3) and (5) below.

1. Obstacle at front (open at back, sides and top)
2. Obstacles at back and front (open at sides and top)
3. Obstacles at back and top (open at front and sides)
4. Obstacles at back, and sides (open at front and top)
5. Obstacles at back, sides and top (open at front)

2) Surrounding space needed when installing multiple units

- When installing units horizontally in a series, leave at least 10 mm space between units.
- Do not use “upward discharge” in case of figure (3) below.

1. Obstacle at front (open at back, sides and top)
2. Obstacles at back and front (open at sides and top)
3. Obstacles at back and top (open at front and sides)

Limit of 3 units can be installed horizontally in series. When installing a larger number of units, maintain the space between units shown above.

3) Installing units, one in each row

4) Installing multiple units in multiple rows

*Keep at least 2000 when using discharge guide in directions other than “upward discharge”.

*Keep at least 3000 when using discharge guide in directions other than “upward discharge”.

### 3 Installation Method

- 4 blowout directions can be selected: Check the orientation of blowout vane, and attach the blowout guide in the direction that matches the situation at local site.

1. Attach the support to the outdoor unit using the washers, spring washers and screws at the 6 points on the existing fan guard

2. Set the orientation of the blowout vane of the discharge guide to the desired direction and install the vane to the outdoor unit using the washers, spring washers and screws at 6 points.

![Diagram of dimensions](Diagram)

**CAUTION**

* Air Guide prevents reverse rotation of outdoor unit fan when it enters low speed rotation mode with fan controller being operated. It is also used for protection of fan when strong winds, such as a typhoon, wind blowing through tall buildings, etc., directly strike the air outlet. In addition, installation of this product is necessary when cooling operation is to be performed in outdoor temperature of \(-5^\circ\text{C}\) or lower (down to \(-15^\circ\text{C}\)).

Note the followings when installing this guide:

1. Be sure not to use "upward discharge" in a place where snowing is possible. Snow may accumulate in the guard, which could damage the fan, etc.
2. Attaching this unit will decrease the performance (by 2-3%) and increase noise from outdoor unit (by approx. 1-2 dB).
3. Do not use "upward discharge" when there are any obstacles at the back and on both sides of outdoor unit (air is taken in from top of unit). This could cause a short cycle.
4. To eliminate the influence of external wind, be sure to install the unit with its back facing to wall.
5. Do not install this unit in a place where wind directly blows to the back of the unit.
How to Use / How to Install

For 2-fan type outdoor unit, two pieces are required.

1 Checking parts

Make sure that all the following parts, in addition to this manual, are in this box:

- Front plate
- Side plate
- Side plate
- Connecting plate
- Mounting screw 5 x 3.5
- Spacer
- Washer (for screw 5)

2 Requirements of space for installation

- One unit installation:
  - Wall surface: 150 or more
  - Air guide: 150 or more

- Multiple unit installation:
  - Installation of multiple units in series must be no more than five units.

3 Installation procedure

For RP1.6, 2, 35, 50

- Fix side plates 2 and 3 (two each) using four screws 6 and attach them to outdoor unit using holes on side plate 7.

For other models:

- Fix side plates 2 and 3 (two each) using four screws 6 and attach them to outdoor unit using holes on side plate 7.
- Attach two connecting plates 4 to side plate 2, using four screws 8 with four washers 10.
- Attach front plate 1 to side plate 2, using six screws 6.

- Fix side plates 2 and 3 (two each) using four screws 6 and attach them to outdoor unit using holes on side plate 7.
- Attach two connecting plates 4 to side plate 2, using four screws 8 with four washers 10.
- Attach front plate 1 to side plate 2, using six screws 6.
Enables operation even when the outside temperature is low. Protect the unit from cold wind.

**Applicable Models**
- PUHZ-RP60/71  
  only 1 piece required

How to Use / How to Install

Package air-conditioner Optional parts
Installation Manual for Air Guide

Always observe for safety

- Carefully read this section «Always observe for safety», and securely install the optional parts.
- Be sure to observe the cautions described here. They include critical contents for safety.
- The following indications show the classifications for danger, and possible consequences following incorrect handling.

**WARNING** Incorrect handling could lead to death or serious injury.

**CAUTION** Incorrect handling could lead to injury or damage to house and household articles.

- After installation, perform a test run and make sure that there is no abnormality, and ask your customer to keep this installation sheet with the instruction manual at all times. Also ask the customer to transfer these manuals to a new user if the user changes.

**WARNING**

- Ask the dealer or specialist for installation.
- If installed incorrectly by user, water leak, electric shock, fire, etc. could result.

**CAUTION**

- Carefully install this panel according to the installation sheet.
- Incorrect installation could cause water leak, electric shock, fire, etc.

Before performing installation (moving) and electrical work

**CAUTION**

- Do not place polyethylene bags in reach of young children.
- If electrical work is necessary, use only specified equipment adapted with current capacity.

- Putting them over the head will block breathing passages, which could result in suffocation.
- Use of unsuitable wire could cause electric leak, overheating or fire.

- Securely apply heat insulation to refrigerant pipe so that no condensation occurs.
- If piping work is incorrect, water leak may occur and ceiling, furniture, etc. may get wet.

- If heat insulation is inadequate, condensation could occur on the surface of pipes and dewdrops could accumulate on ceiling, floor or important goods.

This Air Guide prevents reverse rotation of outdoor unit fan when it enters low speed rotation mode with fan controller being operated. It is also used for protection of fan when strong winds, such as in a typhoon, wind blowing through tall buildings, etc., directly strike the at air outlet.

In addition, installation of this product is necessary when cooling operation is to be performed in outside-air temperature of -5°C or lower (down to -15°C).

Pay attention to the following points when installing this product:
1) To eliminate the effects of external wind, be sure to install this unit with back surface facing wall side.
2) Do not install this unit in orientation or site where wind directly blows at the back of the unit.
3) Installing of this product will reduce the capacity of the unit (approx. 2 or 3%) and increase the noise of outdoor unit (approx. 1 or 2dB).
4) Do not use this product where there is any obstacle at either side or above the outdoor unit (discharged air will be blocked). This may cause a short cycle.

When 2-fan type outdoor unit is used, note that two sets of this product will be necessary.

1 | Checking parts

Make sure that all the following parts, in addition to this manual, are in this box:

<table>
<thead>
<tr>
<th>Part</th>
<th>Quantity</th>
</tr>
</thead>
<tbody>
<tr>
<td>Air Guide</td>
<td>1</td>

<tr>
<td>Spring washer</td>
<td>4</td>
</tr>
</tbody>
</table>
2 Requirements of space for installation

(1) One unit installation:

(2) Multiple unit installation: ※ Installation of multiple units in series must be no more than five units.

3 Installation procedure

(1) Remove the fan guard fixing screws (five screws on circumference), and then remove the fan guard.

(2) Insert the fan guard stoppers into the square holes on the air guide.

(3) Insert the stoppers (four locations) of the fan guard into the installation holes on the outdoor unit.

(4) Install the air guide on the outdoor unit using washers (3), spring washers (4) and screws (2).
※ Use existing screws for handle section.
**Air Protect Guide**

(for cooling at -15°C)  
**PAC-SH95AG-E**

### Descriptions

Enables operation even when the outside temperature is low. Protect the unit from cold wind.

### Notes

1. Be sure not to use "upward discharge" in a place where snowing is possible. Snow may accumulate in the guard, which could damage the fan, etc.
2. Attaching this unit will decrease the performance (by 2-3%) and increase noise from outdoor unit (by approx. 1-2 dB).
3. Do not use "upward discharge" when there are any obstacles at the back and on both sides of outdoor unit (air is taken in from top of unit). This could cause a short cycle.
4. To eliminate the influence of external wind, be sure to install the unit with its back facing to wall.
5. Do not install this unit in a place where wind directly blows to the back of the unit.

**CAUTION**

* Air Guide prevents reverse rotation of outdoor unit fan when it enters low speed rotation mode with fan controller being operated. It is also used for protection of fan when strong winds, such as a typhoon, wind blowing through tall buildings, etc., directly strike the air outlet. In addition, installation of this product is necessary when cooling operation is to be performed in outdoor temperature of -5°C or lower (down to -15°C).

Note the followings when installing this guide:

- 1) Be sure not to use "upward discharge" in a place where snowing is possible. Snow may accumulate in the guard, which could damage the fan, etc.
- 2) Attaching this unit will decrease the performance (by 2-3%) and increase noise from outdoor unit (by approx. 1-2 dB).
- 3) Do not use "upward discharge" when there are any obstacles at the back and on both sides of outdoor unit (air is taken in from top of unit). This could cause a short cycle.
- 4) To eliminate the influence of external wind, be sure to install the unit with its back facing to wall.
- 5) Do not install this unit in a place where wind directly blows to the back of the unit.
How to Use / How to Install

Always observe for safety

- Carefully read this section [Always observe for safety], and securely install the optional parts.
- Be sure to observe the precautions described here. They include critical contents for safety.
- The following indications show the classifications for danger, and possible consequences following incorrect handling.

**WARNING:** Incorrect handling could lead to death or serious injury.

**CAUTION:** Incorrect handling could lead to injury or damage to house and household articles.

After installation, perform a test run and make sure that there is no abnormality, and ask your customer to keep this installation sheet with the instruction manual at all times. Also ask the customer to transfer these manuals to a new user if the user changes.

**WARNING**

- Ask the dealer or specialist for installation.

- If installed incorrectly by user, water leak, electric shock, fire, etc. could result.

- Carefully install the serial according to the installation sheet.

- Incorrect installation could cause water leak, electric shock, fire, etc.

Before performing installation (moving) and electrical work

**CAUTION**

- Do not pass polyethylene bags in reach of young children.

- Putting them over the head will block breathing passages, which could result in suffocation.

- Use only specified electrical wires adapted with current capacity.

- Use of unsuitable wire could cause electric leak, overheating or fire.

- Securingly apply heat insulation to refrigerant pipe so that no condensation occurs.

- If heat insulation is inadequate, condensation could occur on the surface of pipes and dewdrops could accumulate on ceiling, floor or important goods.

- Securely perform drain piping work according to the installation manual so that no condensation occurs.

- If piping work is incorrect, water leak may occur and ceiling, furniture, etc may get wet.

This Air Guide prevents reverse rotation of outdoor unit fan when it enters low speed rotation mode with fan controller being operated. It is also used for protection of fan when strong winds, such as in a typhoon, wind blowing through tall buildings, etc., directly strike the air outlet.

In addition, installation of this product is necessary when cooling operation is to be performed in outside air temperature of -5°C or lower (down to -15°C).

Pay attention to the following points when installing this product:

1) To eliminate the effects of external wind, be sure to install this unit with back surface facing wall side.
2) Do not install this unit in orientation or site where wind directly blows at the back of the unit.
3) Installing of this product will reduce the capacity of the unit (approx. 2 or 3%) and increase the noise of outdoor unit (approx. 1 or 2dB).
4) Do not use this product where there is any obstacle at either side or above the outdoor unit (discharged air will be blocked). This may cause a short cycle.

When 2-fan type outdoor unit is used, note that two sets of this product will be necessary.

1 Checking parts

Make sure that all the following parts, in addition to this manual, are in this box:

| ① Air Guide | 1 | ② Mounting screw (5×16) | 6 | ③ Washer | 6 | ④ Spring washer | 6 |
2 Requirements of space for installation

(1) One unit installation

(2) Multiple unit installation: Installation of multiple units in series must be no more than 5 units.

3 Installation procedure

(1) Install the air guide ① on the outdoor unit using washers ②, spring washers ③ and screws ④.
Cap the unnecessary holes on the outdoor unit (bottom) and centralize the drainage when using a drain pipe.

**Applicable Models**

- PU(H)-P71-140V(Y)HA

**Specifications**

(Drain pipe connection)
How to Use / How to Install

1. Accessory

Be aware that the following parts are put in the package together with the instruction manual.

- Drain socket: 1 pcs
- Drain cap: 5 pcs
- Insulation part (for liquid pipe): 1 pc
- Insulation part (for gas pipe): 1 pc
- Band: 8 pcs

2. Installation method for drain unit

Prepare the adhesive in the field.

(1) Glue the drain socket ① to the hole that is used to centralize the drainage among several holes at the bottom of the unit with the glue (Prepared in the field)
(2) Glue the drain caps ② to close all the other unnecessary holes with the glue (Prepared in the field)

†Apply the glue securely, as the glue will work as seal to prevent water from leaking.
†Use the adhesive for the rubber and metal.
†Recommended product

Supper X sirees made by CEMEDINE Co., Ltd.

(3) Insert a vinyl tube of which inner diameter 25 mm available commercially or a hard vinyl tube VP25 to the drain socket ①.

3. Installation method for insulation parts

Install the insulation parts to stop valve of the outdoor unit.
※The insulation parts should be installed after the tube has been connected to the unit.
※Some units are provided with a check valve near stop valve. In this case, cut the insulation parts ③ and ④ so that they will fit the stop valve properly.

(1) Install the insulation part ③ with 2 holes to the liquid pipe side so that the holes fit the valve caps and cover the stop valve entirely.
(2) Fix the insulation part ③ securely with bands ⑤.

Install the other insulation part ④ to the gas pipe side with the same procedure.

†Cut both ends of the insulation part ④ for gas tube side for the model P71 or less.
Cap the unnecessary holes on the outdoor unit (bottom) and centralize the drainage when using a drain pipe.

Drain socket 3/4B (20A), external thread
How to Use / How to Install

1 Installation Method

(1) When installing on installation frame
1) The installation frame must have structure and strength that can sufficiently support the outdoor unit and drain pan. Securely install the outdoor unit and drain pan so that they cannot fall or drop as a result of earthquake, strong wind, etc.
2) The drain socket of drain pan is at the center in the longitudinal direction. When constructing the installation frame, be careful that no part of the frame interferes with the socket.
3) The drain pan is tightened with the outdoor unit. Punch approx. Ø 13 holes in the installation frame at pitches to install the outdoor unit.
4) Fix the frame, drain pan and outdoor unit together to join them firmly (at the 4 points). The bolt length must be no more than 60 mm.

(2) When installing on foundation
● Since concentrated drain disposal is necessary, make the foundation at least 150 mm high measured from the ground as shown in the figure below.
If it is less than 150 mm, drain piping will not be possible because the drain socket protrudes 48 mm.

2 Drain Piping

(1) When connecting steel pipe:
Connect 3/4B internally threaded pipe.
(2) When connecting vinyl pipe (soft):
Use a Ø 25 mm internal dia. pipe, and fix the connected section with a hose band, etc.
(3) When connecting PVC pipe (hard):
Use VP-20 and connect with a joint for PVC pipe.
※ In all cases, seal the socket threaded section securely with a seal tape, etc., and make sure that water does not leak.

3 Refrigerant Piping

※ For PAC-SG64DP-E only
● The refrigerant pipe can be laid in from four directions: front, right, rear and bottom. When laying, be sure to perform the following:
(1) Piping from the bottom:
Cut out the rubber bush to match the thickness of refrigerant pipe insulator. Pass the refrigerant pipe through the rubber bush and fit it into the burring hole. Seal it with adhesive that is equivalent to Cemedyne 366 (to be procured at local site) to prevent water leak.
(2) Piping from other directions:
Block the burring hole of the bottom piping section in the drain pan with rubber bush. Seal it with adhesive that is equivalent to Cemedyne 366 (to be procured at local site) to prevent water leak.

### Installation Instructions

**The installation must be done by dealer or qualified person.**
- The installation must be done in accordance with this manual.
- Never try any modification.
- Never move or reinstall the machine by the customers.

**The wiring must be securely done by using proper cable.**
- The wires should be connected to the terminals not to have external force of the cable.
- Use proper fuses.

**The terminal cover (panel) of the unit must be installed securely.**
- The electric installation must be done by qualified person in accordance with this installation manual. Use the separate circuit only for this machine and use rated voltage and circuit breaker.

**Never operate the machine without panel or guard off.**
- Never operate the switches with your hand wet.
- Never operate the machine without air filter off.
- Never turn the power off as soon as the machine stops.

**Install a circuit breaker depending upon the location.**
- Use standard wires which meet current capacity.
- Wires must not have tension.

**Put ground wire.**
- Never touch refrigerant pipes while the machine running.

**Turn the power on 12 hours or more before operation.**

</tbody>
</table>
1. Remove the two screws that secure the control board base of electrical parts box, and then slide the base in the direction of the arrow to remove it from the electrical parts box.

2. Check for the four board attachment holes (arrows) in the back of control board base (the control board is attached to the surface).

3. Attach the board (with insulating sheet and support) so that the rotary switch faces up.

4. Use terminal screw ① to secure terminal block④. Terminal block④ has a round boss for positioning. Fit the round boss into the positioning hole in steel-plate.

5. Paste label ③ under terminal block ③.

6. Use lead wire-A ⑧ to connect CN5 of M-NET board ① connection and CNWNT of outdoor control board.

Caution:
Wire Marking:IN type, Connector Color: Red.
Always make sure that the markings and the applicable model match. If used incorrectly, parts could be damaged.

7. Use lead wire-C ⑩ to connect CN6 of M-NET board ① connection and CNWNT of outdoor control board.

8. Use lead wire-D ⑩ to connect CN2M of M-NET board ① connection and terminals A and B of terminal block ⑥. Polarity is not a concern.

Connect the wire firmly making sure that the screws on terminal block are not loose.

9. The lead wires should be tied together with the other lead wires with the pull tight ⑨ not to loose. Wiring length is adjusted according to apparatus.

It progresses to the [ ] page
"3. Wiring method for M-NET"

Note:1.Use ground wire and screw ④ as required to connect the shield of M-NET transmission line to the unit.

Note:2. Take great care that no lead wire is caught on anything when installing panels.
M-NET Converter  PAC-SF81MA-E

#### 放置位置

1. 确保选型和功能与所使用的M-NET接线板兼容。
2. 使用M-NET的电阻器时，请购自M-NET。
3. 使用M-NET的电阻器时，请购自M-NET。

#### 步骤

1. 确保选型和功能与所使用的M-NET接线板兼容。
2. 使用M-NET的电阻器时，请购自M-NET。
3. 使用M-NET的电阻器时，请购自M-NET。

Control / Service Tool

Photo

Descriptions

This item is used to display operation and self-diagnosis state.

Applicable Models

- All PUHZ-HRP
- All PU(H)-P
- All PUHZ-RP outdoor Units (A-control)
- All PUHZ-P

Specifications

<table>
<thead>
<tr>
<th>Power</th>

</tr>
</tbody>
</table>

How to Use / How to Install

- Notes on Use
  - Before installing / removing a control / service tool, make sure that the main power to this unit is turned OFF.
  - The connector for control / service tool has a lock. Connection / removal of the connector must be done with the locking lever pressed.

- How to Use
  1. Connect the control / service tool connector to the [CNM] connector on the outdoor unit control board.
  2. Operating the control / service tool’s DIP switch “SW2” causes “LED1” to display the operation state and inspection code description using 2-digit value and symbols. “SW2” setting varies with the unit to be connected. For details of the display content, refer to the appropriate service handbook.
  3. After the control / service tool has been used, remove it from the outdoor unit control board.
Remote On/Off Input Signal Adaptor

PAC-SC36NA

Photo

• This adapter connects the relay circuit and the outdoor unit control board to enable low noise mode or demand function using external input.
• All parts besides the wires for connection (timer, switch, relay, etc.) must be procured locally.

Applicable Models

- PUHZ-HRP HA2
- PU(H)-P HA
- PUHZ-RP HA4/KA
- MXZ-8A140VA
- PUHZ-P HA3

How to Use / How to Install

Low noise mode (on-site modification) (Fig. 1)

By performing the following modification, operation noise of the outdoor unit can be reduced by about 3-4 dB.

The low noise mode will be activated when a commercially available timer or the contact input of an ON/OFF switch is added to the CNDM connector (option) on the control board of the outdoor unit.

- Complete the circuit as shown when using the external input adapter (PAC-SC36NA) (Option).

SW1 ON: Low noise mode

SW1 OFF: Normal operation

Demand function (on-site modification) (Fig. 2)(Fig. 3)

By performing the following modification, energy consumption can be reduced to 0 – 100% of the normal consumption.

The demand function will be activated when a commercially available timer or the contact input of an ON/OFF switch is added to the CNDM connector (option) on the control board of the outdoor unit.

- By setting SW7-1 (and SW7-2) on the control board of the outdoor unit, the energy consumption (compared to the normal consumption) can be limited as shown below.

How to Use / How to Install

2. Installing the interface unit

2.1. Check the parts (Fig. 2-1)
The interface unit should be supplied with the following parts.

<table>
<thead>
<tr>
<th>Part Name</th>
<th>IF011</th>
<th>IF012</th>
</tr>
</thead>
<tbody>
<tr>
<td>Interface unit</td>
<td>1</td>
<td>1</td>
</tr>
<tr>
<td>Thermistor</td>
<td>2</td>
<td>3</td>
</tr>
</tbody>
</table>

2.2. Choosing the interface unit installation location
- Do not install the interface unit in outdoor location as it is designed for indoor installation only. (The interface board and casing are not waterproof.)
- Avoid locations where the unit is exposed to direct sunlight or other sources of heat.
- Select a location where easy wiring access to the power source is available.
- Avoid locations where combustible gases may leak, be produced, flow, or accumulate.
- Select a level location that can bear the weight and vibration of the unit.
- Avoid locations where the unit is exposed to oil, steam, or sulfuric gas.

2.3. Installing the interface unit (Fig. 2-2, Photo.2-1)
1. Remove 2 screws from interface unit and remove the cover.
2. Install the 4 screws (locally supplied) in 4 holes.
   - Screw
   - Cover
   - Hole for installation
3. Electrical work

3.1. Interface unit (Photo. 3-1)
1. Remove the cover.
2. Wire the power cable and control cable separately through the respective wiring inlets given in the photo.
   • Do not allow slackening of the terminal screws.

   - Inlet for control cable
   - Inlet for power
   - Clamp
   - Interface / Outdoor unit connecting terminals
   - Earth terminal

3.1.1. Interface unit power supplied from outdoor unit
The following connection patterns are available. The outdoor unit power supply patterns vary on models.

Note: Wiring size must comply with the applicable local and national code.

<table>
<thead>
<tr>
<th>Interface unit model</th>
<th>Wiring size</th>
<th>Circuit rating</th>
</tr>
</thead>
<tbody>
<tr>
<td>Interface unit-Outdoor unit</td>
<td>3 × 1.5 (polar)</td>
<td>AC 230 V</td>
</tr>
<tr>

<td>1 × Min. 1.5</td>
<td>DC24 V</td>
</tr>
<tr>
<td>Interface unit-Outdoor unit S1-S2</td>
<td>*2</td>
<td></td>
</tr>
<tr>
<td>Interface unit-Outdoor unit S2-S3</td>
<td>*3</td>
<td></td>
</tr>
</tbody>
</table>

*1. Max. 80 m
*2. The figures are NOT always against the ground.
*3. Interface S3 terminal has DC 24 V against S2 terminal. However, between S3 and S1, these terminals are not electrically insulated by the transformer or other device.

Notes:
1. Wiring size must comply with the applicable local and national code.
2. Power supply cables and interface unit/outdoor unit connecting cables shall not be lighter than polychloroprene sheathed flexible cable. (Design 60245 IEC 57)
3. Install an earth longer than other cables.
3. Electrical work

3.1.2. Separate interface unit/outdoor unit power supplies

The following connection patterns are available. The outdoor unit power supply patterns vary on models.

A: Outdoor unit power supply
B: Earth leakage breaker
C: Wiring circuit breaker or isolating switch
D: Outdoor unit
E: Interface unit/outdoor unit connecting cables
F: Interface unit
G: Interface unit power supply

If the interface and outdoor units have separate power supplies, refer to the table below.

<table>
<thead>
<tr>
<th>Interface unit controller connector (CNS2) connection change</th>
<th>Separate power supply specifications</th>
</tr>
</thead>
<tbody>
<tr>
<td>Outdoor unit DIP switch settings (when using separate interface unit/outdoor unit power supplies only)</td>
<td></td>
</tr>
<tr>
<td>ON 3</td>
<td></td>
</tr>
<tr>
<td>OFF 1 2</td>
<td>(SW8)</td>
</tr>
<tr>
<td>Set the SW8-3 to ON.</td>
<td></td>
</tr>
</tbody>
</table>

*1. A breaker with at least 3.0mm contact separation in each pole shall be provided. Use earth leakage breaker (NV).
*2. Max. 120 m
*3. The figures are NOT always against the ground.

Notes:
1. Wiring size must comply with the applicable local and national code.
2. Power supply cables and interface unit/outdoor unit connecting cables shall not be lighter than polychloroprene sheathed flexible cable. (Design 60245 IEC 57)
3. Install an earth longer than other cables.

3.1.3. Connecting thermistor cable

Connect the thermistor for the interface controller.

1. Target temp. thermistor (TH1)
   Connect the thermistor for the target temp. to 1 and 2 on the terminal block (TB61) on the interface controller.

2. Pipe temp. thermistor / Liquid (TH2)
   Connect the thermistor for the pipe temp. to 3 and 4 on the terminal block (TB61) on the interface controller.

3. Cond./eva. temp. thermistor (TH5): For PAC-IF012B-E only
   Connect the thermistor for the cond./eva. temp. to 5 and 6 on the terminal block (TB61) on the interface controller.
   When the thermistor cables are too long, cut it to the appropriate length. Do not bind it in the interface unit.

Caution:
Do not route the thermistor cables together with power cables. The sensor part of the thermistor should be installed where user must not touch. (It is separated by the supplementary insulation from where user may touch.)
### 3. Electrical work

#### 3.1.4. Connecting external input

Demand control is available by external input. It is possible to set the outdoor unit’s power consumption by setting the switch of the interface controller.

**Switch1, Switch 6 : Input selection of inverter capacity setting**

<td>Item</td>
<td>Fixed operation mode</td>
<td>Cooling</td>
<td>Heating</td>
</tr>
</tbody>
</table>

**Cable length**: Maximum 10m

**Remote switch**: Minimum applicable load DC12V, 1mA

**Caution:**
The external input signals are separated by basic insulation from power supply for the unit. The external input signals should be separated by supplementary insulation from where user may touch in case that it is installed where user may touch.

Connect the terminals by using the ring terminals and also insulate the cables of adjoining terminals when wiring to terminal block.
3. Electrical work

3.1.5. Connecting External Output
The signal in the following states can be output.

<table>
<thead>
<tr>
<th>Item</th>
<th>Connection 1</th>
<th>Connection 2</th>
</tr>
</thead>
<tbody>
<tr>
<td>1-2 (OUT1) X1</td>
<td>Operation Output</td>
<td>OFF</td>

<td>Mode (Heat) Output</td>
<td>OFF</td>
</tr>
<tr>
<td>13-14 (OUT7)</td>
<td>-</td>
<td>-</td>
</tr>
</tbody>
</table>

Cable length : Maximum 50m
Output specification : Non-voltage switch 1A or less, 240V AC
*Connect the surge absorber according to the load at site.

Note : External output signals are separated by basic insulation from other circuit of interface.
Caution : When 2 or more external outputs are used, the power supply on the output side should be the same.

3.1.6. Wiring specification External output / External input
Locally supplied parts

<table>

</tr>
</tbody>
</table>

3.1.8. Before test run
After completing installation and the wiring and piping of the local application and outdoor units, check for refrigerant leakage, looseness in the power supply or control wiring, wrong polarity, and no disconnection of one phase in the supply.
Use a 500-volt megohmmeter to check that the resistance between the power supply terminals and ground is at least 1.0MΩ.

**Warning:**
Do not use the system if the insulation resistance is less than 1.0MΩ.

**Caution:**
Do not carry out this test on the control wiring (low voltage circuit) terminals.
**Local Application Factors**

* This interface is to connect Mr. Slim inverter outdoor unit of MITSUBISHI ELECTRIC to local applications. Please check the following when designing the local system.
* MITSUBISHI ELECTRIC does not take any responsibility on the local system design.

1. **Heat exchanger**
   
   (1) **Withstanding pressure**
   
   Designed pressure of outdoor unit is 4.15 MPa. Following must be satisfied for burst pressure of connecting application.
   
   Burst pressure : More than 12.45 MPa (3 times more than designed pressure)

   (2) **Performance**
   
   Secure the heat exchanger capacity which meets the following conditions. If the conditions are not met, it may result in malfunction caused by the protection operation or the outdoor unit may be turned off due to the operation of protection system.
   
   1. Evaporate temperature is more than 4°C in max. frequency operation under the cooling rated conditions.
   2. Condense temperature is less than 60°C in max. frequency operation under the heating rated conditions.
   3. In case of hot water supply, condense temperature is less than 58°C in max. frequency operation with the outside temperature 7°C.D.B./6°C.W.B.

   *2. Indoor: 20°C.D.B.  Outdoor: 7°C.D.B./6°C.W.B.

   (3) **Heat exchanger internal capacity**
   
   Heat exchanger internal capacity must be within the capacity range shown below. If the heat exchanger below the minimum capacity is connected, it may result in the back flow of liquid or the failure of the compressor.
   
   If the heat exchanger above the maximum capacity is connected, it may result in the deficiency in performance due to lack of refrigerant or overheating of the compressor.

   Minimum capacity : 10 × Model capacity [cm³] / Maximum capacity : 30 × Model capacity [cm³]

   e.g. When connecting to PUHZ-RP100 VHA2
   
   Minimum capacity : 10 × 100 =1000 cm³
   
   Maximum capacity : 30 × 100 =3000 cm³

<table>
<thead>
<tr>
<th>Model capacity</th>
<th>35</th>
<th>50</th>
<th>60</th>
<th>71</th>
<th>100</th>
<th>125</th>
<th>140</th>
<th>200</th>
<th>250</th>
</tr>
</thead>
<tbody>
<tr>
<td>Maximum capacity [cm³]</td>
<td>1050</td>
<td>1500</td>
<td>1800</td>
<td>2130</td>
<td>3000</td>
<td>3750</td>
<td>4200</td>
<td>6000</td>
<td>7500</td>
</tr>
<tr>
<td>Minimum capacity [cm³]</td>
<td>350</td>

<td>1000</td>
<td>1250</td>
<td>1400</td>
<td>2000</td>
<td>2500</td>
</tr>
</tbody>
</table>

(4) **Contamination maintenance**

1. Wash the inside of heat exchanger to keep it clean. Be sure to rinse not to leave flux. Do not use chlorine detergent when washing.
2. Be sure that the amount of contamination per unit cubic content of heat transfer pipe is less than the following amount.
   
   Example) In case of φ9.52mm
   
   Residual water : 0.6mg/m, Residual oil : 0.5mg/m, Solid foreign object : 1.8mg/m

2. **Thermistor position**

   <Target temp.thermistor (TH1)> (Used only in *auto mode (Only for Air to Air applications))
   
   1. Put thermistor (TH1) where average intake temperature for heat exchanger can be detected.
   2. It is better to put thermistor (TH1) where radiant heat from heat exchanger can be avoided.
   
   To use this interface for manual step control, put a fixed resistor of 4~10kΩ instead of thermistor (TH1 on the terminal block TB61).

   * Auto mode: In this mode, the capacity step of the outdoor unit is controlled automatically to let the target (intake) temperature reach the setting temperature. (Only for air to air application)

   <Liquid pipe thermistor(TH2)>

   1. Put thermistor (TH2) where liquid refrigerant pipe temperature can be detected.
   2. It is better to protect the thermistor (TH2) with heat insulating materials not to be affected by the ambient temperature, etc.
   3. In case that the refrigerant is distributed by distributor, put thermistor (TH2) before the distributor.

   <Cond./Eva. temp. thermistor (TH5)>

   1. Put thermistor (TH5) where Cond./Eva. temperature can be detected on the indoor HEX pipe.
