Air-Conditioners For Building Application
INDOOR UNIT
PKFY-P·VKM-E

For use with the R410A, R407C & R22

INSTALLATION MANUAL
For safe and correct use, please read this installation manual thoroughly before installing the air-conditioner unit.
1. Safety precautions

⚠️ Warning:
Describes precautions that must be observed to prevent danger of injury or death to the user.

⚠️ Caution:
Describes precautions that must be observed to prevent damage to the unit.

After installation work has been completed, explain the “Safety Precautions,” use, and maintenance of the unit to the customer according to the information in the Operation Manual and perform the test run to ensure normal operation. Both the Installation Manual and Operation Manual must be given to the user for keeping. These manuals must be passed on to subsequent users.

⚠️ Warning:
• Ask the dealer or an authorized technician to install the air conditioner.
• Install the unit at a place that can withstand its weight.
• Use the specified cables for wiring.
• Use only accessories authorized by Mitsubishi Electric and ask the dealer or an authorized technician to install them.
• Do not touch the heat exchanger fins.
• Install the air conditioner according to this Installation Manual.

⚠️ Caution:
• Have all electric work done by a licensed electrician according to local regulations.
• If the air conditioner is installed in a small room, measures must be taken to prevent the refrigerant concentration from exceeding the safety limit even if the refrigerant should leak.
• The cut face punched parts may cause injury by cut, etc. The installers are requested to wear protective equipment such as gloves, etc.

⚠️ Warning:
Carefully read the labels affixed to the main unit.

⚠️ Caution:
• Do not use the existing refrigerant piping, when use R410A or R407C refrigerant.
• Use ester oil, either oil or alkylbenzene (small amount) as the refrigerator oil to coat flares and flange connections, when use R410A or R407C refrigerant.
• Do not use the air conditioner where food, pets, plants, precision instruments, or artwork are kept.
• Do not use the air conditioner in special environments.

⚠️ Caution:
• Ground the unit.
• Install an leak molded case circuit breaker, as required.
• Use power line cables of sufficient current carrying capacity and rating.
• Use only a molded case circuit breaker and fuse of the specified capacity.
• Do not touch the switches with wet fingers.
• Do not touch the refrigerant pipes during and immediately after operation.
• Do not operate the air conditioner with the panels and guards removed.
• Do not turn off the power immediately after stopping operation.
2. Installation location

2.1. Outline dimensions (Indoor unit) (Fig. 2-1)
Select a proper position allowing the following clearances for installation and maintenance.

* PKFY-P·VKM-E

<table>
<thead>
<tr>

3. Installing the indoor unit

3.1. Check the indoor unit accessories (Fig. 3-1)
The indoor unit should be supplied with the following accessories.

* PKFY-P·VKM-E

3.2. Installing the wall mounting fixture

3.2.1. Setting the wall mounting fixture and piping positions
Using the wall mounting fixture, determine the unit’s installation position and the locations of the piping holes to be drilled.

**Warning:**
Before drilling a hole in the wall, you must consult the building contractor.

* PKFY-P·VKM-E (Fig. 3-2)

3.2.2. Drilling the piping hole (Fig. 3-3)
Use a core drill to make a hole of 75-80 mm diameter in the wall in the piping direction, at the position shown in the diagram to the left.

**Warning:**
The hole should incline so that the outside opening is lower than the inside opening.

Insert a sleeve (with a 75 mm diameter and purchased locally) through the hole.

**Note:**
The purpose of the hole's inclination is to promote drain flow.
3. Installing the indoor unit

3.2.3. Installing the wall mounting fixture
▶ Since the indoor unit weighs near 21 kg, selection of the mounting location requires thorough consideration. If the wall does not seem to be strong enough, reinforce it with boards or beams before installation.
▶ The mounting fixture must be secured at both ends and at the centre, if possible. Never fix it at a single spot or in any nonsymmetrical way.
(If possible, secure the fixture at all the positions marked with a bold arrow.)
⚠️ Warning:
If possible, secure the fixture at all positions indicated with a bold arrow.

⚠️ Caution:
• The unit body must be mounted horizontally.
• Fasten at the holes marked with ▲ as shown by the arrows.

PKFY-P·VKM-E (Fig. 3-4)
- Min. 90 mm (617.6 mm or greater with optional drain pump installation)
- Min. 200 mm
- Min. 70 mm (130 mm or greater with left, rear left, or lower left piping, and optional drain pump installation)
- Fixing screws (4 x 25)
- Level
- Fasten a thread to the hole.
- Place the level against the horizontal reference line of the mount board and mount so that it is level. Hang a weight from the thread and align with EPK of the mount board to permit leveling.
- Weight
- Mount board

PKFY-P·VKM-E (Fig. 3-5)
- The pipes are on the bottom left.
- When the cooling pipe, drain pipes internal/external connection lines etc are to be embedded into the wall in advance, the extruding pipes etc, may have to be bent and have their length modified to suit the unit.
- Use marking on the mount board as a reference when adjusting the length of the embedded cooling pipe.
- During construction, give the length of the extruding pipes etc some leeway.

PKFY-P·VKM-E (Fig. 3-6)
- Remove the flare nut and cap of the indoor unit. (Gas pipe only)
- Apply refrigerating machine oil to the flare sheet surface. (Preparation on location)
- Facing the direction in which the L-shaped connection pipe ④ will be removed, make a quick connection to the indoor unit flare connection opening.
- Tighten the flare nut using a double open-end wrench. (Fig. 3-9)
  Tightening force: 68 to 82 N·m
- Attach the charge nut ⑤ to the liquid pipe side joint portion, and check for leakage of the L-shaped connection pipe ④ connection portion.
  Remove the charge nut ⑤ after completion of the work.
  Tightening force: 34 to 42 N·m
- Cover the flare connection portion with the pipe cover of the L-shaped connection pipe ④ so that it is not exposed. (Fig. 3-10)
  L-shaped connection pipe ④
  Cut-off position (Straight pipe portion)
  Tightening direction
  Cover with pipe cover
  Cover the flare nut connection portion with the pipe cover.

Lower piping (Fig. 3-7)
1. Cut L-shaped connection pipe ④ at the position indicated in (Fig. 3-8).
2. Insert the flare nut that was removed earlier onto the straight pipe side of the cut L-shaped connection pipe ④ and then flare the end of the pipe.
3. Remove the flare nut and cap of the indoor unit. (Gas pipe only)
4. Apply refrigerating machine oil to the flare sheet surface. (Preparation on location)
5. Quickly connect the L-shaped connection pipe ④ that has been processed as described in part 2) to the indoor unit flare connection opening.
6. Tighten the flare nut using a double open-end wrench. (Fig. 3-9)
  Tightening force: 68 to 82 N·m
7. Attach the charge nut ⑤ to the liquid pipe side joint portion, and check for leakage of the L-shaped connection pipe ④ connection portion.
  Remove the charge nut ⑤ after completion of the work.
  Tightening force: 34 to 42 N·m
8. Cover the flare connection portion with the pipe cover of the L-shaped connection pipe ④ so that it is not exposed. (Fig. 3-10)
3. Installing the indoor unit

Leakage check of the L-shaped connection pipe connection portion
1. Attach the charge nut ⑤ to the liquid pipe side joint portion. Tightening force: 34 to 42 N·m
2. Pressurize by filling with nitrogen gas from the charge nut. Do not pressurize to the current constant pressure all at once. Pressurize gradually.
   1) Pressurize to 0.5 MPa, wait five minutes, and make sure the pressure does not decrease.
   2) Pressurize to 1.5 MPa, wait five minutes, and make sure the pressure does not decrease.
   3) Pressurize to 4.15 MPa and measure the surrounding temperature and refrigerant pressure.
3. If the specified pressure holds for about one day and does not decrease, the pipes have passed the test and there are no leaks.
   • If the surrounding temperature changes by 1°C, the pressure will change by about 0.01 MPa. Make the necessary corrections.
4. If the pressure decreases in steps (2) or (3), there is a gas leak. Look for the source of the gas leak.

Extraction and processing of the piping and wiring (Fig. 3-11)
2. Wrap the felt tape ③ in the range of the refrigerant piping and drain hose which will be housed within the piping space of the indoor unit.
   • Wrap the felt tape ③ securely from the base for each of the refrigerant piping and the drain hose.
   • Overlap the felt tape ③ at one-half of the tape width.
   • Fasten the end portion of the wrapping with vinyl tape.
   - Liquid pipe
   - Gas pipe
   - Indoor/outdoor connection cable
   - Drain hose
   - Felt tape ③
3. Be careful that the drain hose is not raised, and that contact is not made with the indoor unit box body.
   Do not pull the drain hose forcefully because it might come out.

Rear, right and lower piping (Fig. 3-12)
1) Be careful that the drain hose is not raised, and that contact is not made with the indoor unit box body.
   Arrange the drain hose at the underside of the piping and wrap it with felt tape ③.
2) Securely wrap the felt tape ③ starting from the base. (Overlap the felt tape at one-half of the tape width.)
   - Cut off for right piping.
   - Cut off for lower piping.

Left and left rear piping (Fig. 3-13)
4. Drain hose replacement - See 6. Drainage piping work
   Be sure to replace the drain hose and the drain cap for the left and rear left piping. Dripping may occur if you forget to install or fail to replace these parts.
   - Drain cap
   1) Be careful that the drain hose is not raised, and that contact is not made with the indoor unit box body.
   2) Securely wrap the felt tape ③ starting from the base. (Overlap the felt tape at one-half of the tape width.)
   3) Fasten the end portion of the felt tape ③ with vinyl tape.
   - Cut off for left piping.
3. Installing the indoor unit

3.5. Mounting the indoor unit
1. Affix the mount board 1 to the wall.
2. Hang the indoor unit on the hook positioned on the upper part of the mount board.

Rear, right and lower piping (Fig. 3-14)
3. While inserting the refrigerant piping and drain hose into the wall penetration hole (penetration sleeve), hang the top of the indoor unit to the mount board 1.
4. Move the indoor unit to the left and right, and verify that the indoor unit is hung securely.
5. Fasten by pushing the bottom part of the indoor unit onto the mount board 1.
   (Fig. 3-15)
   * Check that the knobs on the bottom of the indoor unit are securely hooked into the mount board 1.
6. After installation, be sure to check that the indoor unit is installed level.

Left and left rear piping (Fig. 3-16)
3. While inserting the drain hose into the wall penetration hole (penetration sleeve), hang the top of the indoor unit to the mount board 1.
   Giving consideration to the piping storage, move the unit all the way to the left side, then cut part of the packaging carton and wrap into a cylindrical form as illustrated in the diagram. Hook this to the rear surface rib as a spacer, and raise the indoor unit.
4. Connect the refrigerant piping with the site-side refrigerant piping.
5. Fasten by pushing the bottom part of the indoor unit onto the mount board 1.
   * Check that the knobs on the bottom of the indoor unit are securely hooked into the mount board 1.
6. After installation, be sure to check that the indoor unit is installed level.

A Mount board 1
B Indoor unit
C Hook
D square hole
4. Installing the refrigerant piping

4.1. Connecting pipes (Fig. 4-1)
- When commercially available copper pipes are used, wrap liquid and gas pipes with commercially available insulation materials (heat-resistant to 100 °C or more, thickness of 12 mm or more).
- The indoor parts of the drain pipe should be wrapped with polyethylene foam insulation materials (specific gravity of 0.03, thickness of 9 mm or more).
- Apply thin layer of refrigerant oil to pipe and joint seating surface before tightening flare nut.
- Use two wrenches to tighten piping connections.
- Use refrigerant piping insulation provided to insulate indoor unit connections. Insulate carefully.

</table>

B Refrigerant pipe sizes & Flare nut tightening torque

C Do not apply refrigerating machine oil to the screw portions.
(This will make the flare nuts more apt to loosen.)

D Be certain to use the flare nuts that are attached to the main unit.
(Use of commercially-available products may result in cracking.)

- Liquid pipe
- Drain hose
- Left-side piping knockout hole
- Right-side piping knockout hole
- Lower piping knockout hole
- Mount board
4. Installing the refrigerant piping

4.3. Refrigerant piping (Fig. 4-3)

Indoor unit
1. Remove the flare nut and cap of the indoor unit.
2. Make a flare for the liquid pipe and gas pipe and apply refrigerating machine oil (available from your local supplier) to the flare sheet surface.
3. Quickly connect the on site cooling pipes to the unit.
4. Wrap the pipe cover that is attached to the gas pipe and make sure that the connection join is not visible.
5. Wrap the pipe cover of the unit’s liquid pipe and make sure that it covers the insulation material of the on site liquid pipe.
6. The portion where the insulation material is joined is sealed by taping.
   - Site-side refrigerant piping
   - Unit side refrigerant piping

4.3.1. Storing in the piping space of the unit (Fig. 4-4)
1. Wrap the supplied felt tape in the range of the refrigerant piping which will be housed within the piping space of the unit to prevent dripping.
2. Overlap the felt tape at one-half of the tape width.
3. Fasten the end portion of the wrapping with vinyl tape, etc.
   - Gas pipe
   - Liquid pipe
   - Indoor/outdoor connection cable
   - Felt tape
5. Drainage piping work

5.1. Drainage piping work (Fig. 5-1)
- Drain pipes should have an inclination of 1/100 or more.
- For extension of the drain pipe, use a soft hose (inner dia. 15 mm) available on the market or hard vinyl chloride pipe (VP-16/O.D. ø22 PVC TUBE). Make sure that there is no water leakage from the connections.
- Do not put the drain piping directly in a drainage ditch where sulphuric gas may be generated.
- When piping has been completed, check that water flows from the end of the drain pipe.

Caution:
The drain pipe should be installed according to this Installation Manual to ensure correct drainage. Thermal insulation of the drain pipes is necessary to prevent condensation. If the drain pipes are not properly installed and insulated, condensation may drip on the ceiling, floor or other possessions.

Fig. 5-1

Preparing left and left rear piping (Fig. 5-2)
1. Remove the drain cap.
   - Remove the drain cap by holding the bit that sticks out at the end of the pipe and pulling.
   - Drain cap
2. Remove the drain hose.
   - Remove the drain hose by holding on to the base of the hose (shown by arrow) and pulling towards yourself.
3. Insert the drain cap.
   - Insert a screwdriver etc into the hole at the end of the pipe and be sure to push to the base of the drain cap.
4. Insert the drain hose.
   - Push the drain hose until it is at the base of the drain box connection outlet.
   - Please make sure the drain hose hook is fastened properly over the extruding drain box connection outlet.
   - Hooks

Fig. 5-2

Storing in the piping space of the indoor unit (Fig. 5-3)
- When the drain hose will be routed indoors, be sure to wrap it with commercially available insulation.
- Gather the drain hose and the refrigerant piping together and wrap them with the supplied felt tape.
- Overlap the felt tape at one-half of the tape width.
- Fasten the end portion of the wrapping with vinyl tape, etc.

Fig. 5-3

Check of drainage (Fig. 5-4)
1. Open the front grille and remove the filter.
2. Facing the fins of the heat exchanger, slowly fill with water.
3. After the drainage check, attach the filter and close the grille.

Fig. 5-4
6. Electrical work

6.1. Electrical work

PKFY-P·VKM-E (Fig. 6-1)

Connection can be made without removing the front panel.

1. Open the front grille, remove the screw (1 piece), and remove the electrical parts cover.
2. Securely connect each wire to the terminal board.
   * In consideration of servicing, provide extra length for each of the wires.
   * Take care when using strand wires, because beards may cause the wiring to short out.
3. Install the parts that were removed back to their original condition.
4. Fasten each of the wires with the clamp under the electrical parts box.

Fig. 6-1

PKFY-P·VKM-E (Fig. 6-1)

Connection can be made without removing the front panel.

1. Open the front grille, remove the screw (1 piece), and remove the electrical parts cover.
2. Securely connect each wire to the terminal board.
   * In consideration of servicing, provide extra length for each of the wires.
   * Take care when using strand wires, because beards may cause the wiring to short out.
3. Install the parts that were removed back to their original condition.
4. Fasten each of the wires with the clamp under the electrical parts box.

Fig. 6-2

6.2. Power supply wiring

- Power supply cable of appliance shall not be lighter than design 245 IEC 53 or 227 IEC 53.
- Install an earth line longer than other cables.
- A switch with at least 3 mm, 1/8 inch contact separation in each pole shall be provided by the air conditioner installation. Power cable size : more than 1.5 mm$^2$ (3-core)

Fig. 6-2

6. Electrical work

6.4. Connecting remote controller, indoor and outdoor transmission cables (Fig. 6-3)
- Connect indoor unit TB5 and outdoor unit TB3. (Non-polarized 2-wire) The "S" on indoor unit TB5 is a shielding wire connection. For specifications about the connecting cables, refer to the outdoor unit installation manual.
- Install a remote controller following the manual supplied with the remote controller.
- Connect the remote controller's transmission cable within 10 m using a 0.75 mm² core cable. If the distance is more than 10 m, use a 1.25 mm² junction cable.
  1. MA Remote controller
  2. DC 9 to 13 V between 1 and 2 (MA remote controller)
  3. M-NET Remote controller
- Connect the "M1" and "M2" on indoor unit TB15 to a M-NET remote controller. (Non-polarized 2-wire)
- DC 24 to 30 V between M1 and M2 (M-NET remote controller)
- Connect the wire of wireless signal receiver (9-pole cable) to CN80 of indoor controller board.
- When more than two units are run under group control using wireless remote controller, connect TB15 each with the same number.
- To change Pair No. setting, refer to installation manual attached to wireless remote controller. (In the default setting of indoor unit and wireless remote controller, Pair No. is 0.)
- Connect the remote controller's transmission cable within 10 m using a 0.75 mm² core cable. If the distance is more than 10 m, use a 1.25 mm² junction cable.
- Connect the "M1" and "M2" on indoor unit TB5 to a M-NET remote controller. (Non-polarized 2-wire)
- DC 24 to 30 V between M1 and M2 (M-NET remote controller)
- Connect the wire of wireless signal receiver (9-pole cable) to CN80 of indoor controller board.
- When more than two units are run under group control using wireless remote controller, connect TB15 each with the same number.
- To change Pair No. setting, refer to installation manual attached to wireless remote controller. (In the default setting of indoor unit and wireless remote controller, Pair No. is 0.)

6.5. Setting addresses (Fig. 6-4)
(Be sure to operate with the main power turned OFF.)
- There are two types of rotary switch setting available: setting addresses 1 to 9 and over 10, and setting branch numbers.
  1. How to set addresses
     Example: If Address is "3", remain SW12 (for over 10) at "0", and match SW11 (for 1 to 9) with "3".
     2. How to set branch numbers SW14 (Series R2 only)
        Match the indoor unit's refrigerant pipe with the BC controller's end connection number.
        Remain other than series R2 at "0".
        The rotary switches are all set to "0" when shipped from the factory. These switches can be used to set unit addresses and branch numbers at will.
        The determination of indoor unit addresses varies with the system at site. Set them referring to the Data Book.

6.6. Sensing room temperature with the built-in sensor in a remote controller
If you want to sense room temperature with the built-in sensor in a remote controller, set SW1-1 on the control board to "ON". The setting of SW1-7 and SW1-8 as necessary also makes it possible to adjust the air flow at a time when the heating thermometer is OFF.

7. Test run (Fig. 7-1)

A. ON/OFF button
B. Test run display
C. Indoor temperature liquid line temperature display
D. ON/OFF lamp
E. Power display
F. Error code display
G. Test run remaining time display
H. Set temperature button
I. Mode selection button
J. Fan speed button
K. TEST button

1. Turn on the power at least 12 hours before the test run.
2. Press the [TEST] button twice. → "TEST RUN" liquid crystal display
3. Press the [Mode selection] button. → Make sure that wind is blown out.
4. Press the [Mode selection] button and switch to the cooling (or heating) mode. → Make sure that cold (or warm) wind is blown out.
5. Press the [Fan speed] button. → Make sure that the wind speed is switched.
6. Check operation of the outdoor unit fan.
7. Release test run by pressing the [ON/OFF] button. → Stop
8. Register a telephone number.
   The telephone number of the repair shop, sales office, etc., to contact if an error occurs can be registered in the remote controller. The telephone number will be displayed when an error occurs. For registration procedures, refer to the operation manual for the indoor unit.
This product is designed and intended for use in the residential, commercial and light-industrial environment.

The product at hand is based on the following EU regulations:
- Low Voltage Directive 2006/95 EEC

Please be sure to put the contact address/telephone number on this manual before handing it to the customer.
