Mitsubishi Electric Residential Living Solutions

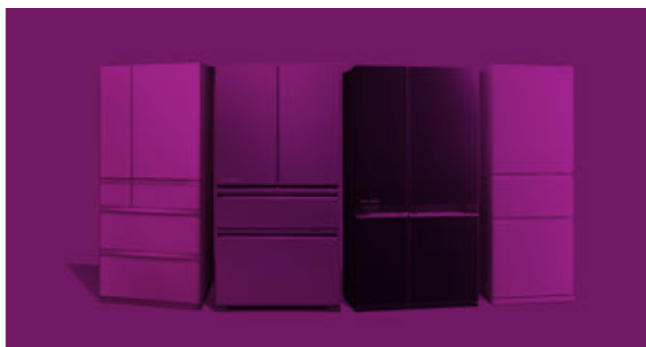

Together, we can build better.

Mitsubishi Electric offers a suite of leading products and solutions that enhance the comfort, sustainability and efficiency of residential living environments.

Mitsubishi Electric manufactures a wide range of high-quality, energy-efficient electrical appliances and equipment for homeowners, tenants, strata managers and residential apartment managers. Our products and solutions include air conditioners, air treatment solutions and refrigerators, all designed and manufactured to incorporate leading technologies and energy efficiency.

Reducing energy consumption, enhancing the comfort and ambience of living environments and ensuring cost effective solutions are all key focus areas that drive our ongoing development and delivery of innovative products for residential environments.

Our Products & Solutions

REFRIGERATION

Solution Overview

Mitsubishi Electric award-winning fridges are ergonomically designed for the end-user, enabling efficiency and ease-of-use.

Our fridges incorporate various refrigeration and freezer configurations to meet customer needs, with multi-drawer, French door and top or bottom mount freezer models.

Benefits

Our range of fridge designs, capacities and functionalities are designed to meet a range of unique kitchen sizes and residential usage requirements.

Energy efficiency, food preservation and hygiene control technologies are included, promoting enhanced safety and sustainability benefits for users.

Multi Drawer WX Features

- » 4.0 star energy rating
- » Multi airflow system for efficient cooling in all fridge areas
- » Hot, soft and supercool freezing options, vacuum insulation panel, automatic ice maker, and vegetable drawer with VitaLED and humidity control.
- » Glass door panels for a striking aesthetic and easy-to-clean finish

AIR PURIFIER

Solution Overview

The Mitsubishi Electric air purifier improves indoor air quality in homes, reducing the risk associated with airborne allergens and viruses.

Our air purifier is designed to clean and filter large volumes of air efficiently and is highly effective in cleaning large spaces in a short period of time.

Benefits

Our air purifier removes fine particles both improving the comfort of living environments for residents and reducing potential exposure to common asthma and allergy triggers including dust, pollen, pet allergens and some gases.

Our innovative auto cleaning and washable pre-filter, high-performance HEPA filter, platinum catalyst filter and activated carbon filter catch up to 99.97%* of ultra-fine particles and harmful gases, and use nanotechnology to absorb odorants and freshen living spaces.

Features

- » 508 m³/h clean air delivery rate
- » Multi speed settings including turbo, quiet and silent modes
- » Multi directional airflow louvres with five angles, which stop where air is most contaminated
- » Three-step clean light monitor indicating levels of indoor air contamination

* Tested in accordance with JIS B 9908:2011

AP SERIES SPLIT SYSTEM AIR CONDITIONING

Solution Overview

Custom designed for residential living, the Mitsubishi Electric AP Series Split System Air Conditioners are engineered for effective climate control all year round. A streamlined design and neutral colour palette ensures this air conditioner blends into any home and our innovative heating and cooling technology improves energy efficiency.

We also supply an extensive range of leading wall-mounted, multi-split and ducted air conditioners.

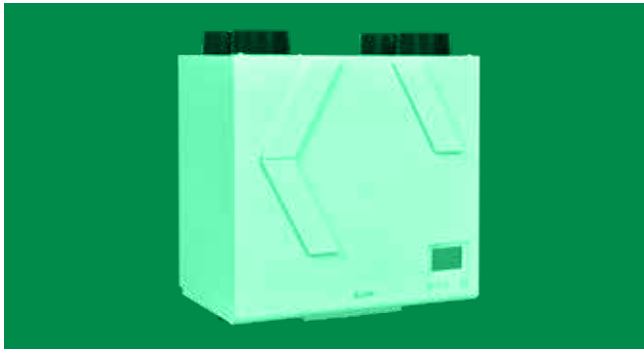

Benefits

Comfortable living environments are enhanced with the AP Series' settings, which include quiet and night mode. Quiet mode is part of the fan speed of the indoor unit. The lower the fan speed, the quieter the operation of the indoor unit. Night mode changes the brightness of the operator indicator, disables the beep sound and limits the outdoor unit noise level.

Full inverter technology improves the high performance of our air conditioning units. Energy efficiency is enhanced with R32 refrigerant (compared with R410A) and anti-corrosion treatment is applied to the heat exchanger of the outdoor unit for added long-term protection.

Features

- » Capacity range: 2.0kw - 7.8kW
- » Quiet operation, night mode, vertical and horizontal vanes, option for Wi-Fi control
- » Dual barrier coating reduces dust and greasy dirt sticking to the unit, reducing cleaning needs
- » R32 refrigerant, full inverter for finer control, and advanced air filtration with built-in Anti-Allergy Enzyme Filter

LOSSNAY VENTILATION

Solution Overview

The Mitsubishi Electric pioneering Lossnay ventilation system operates as a heat exchange in homes, removing stale inside air and replacing it with fresh, filtered outdoor air.

Designed for (but not limited to) airtight and highly insulated houses, these systems also recover energy from the outgoing air to pre-heat or cool incoming fresh air as needed, to control climate conditions at the optimal level.

Benefits

Lossnay ventilation systems are engineered to support healthy homes and living spaces, providing fresh air inside without the need to have windows open. The system also assists in reducing moisture and condensation and improving air quality.

Energy savings are a key benefit for homeowners and facility operators with Lossnay ventilation. Heat recovery from outgoing stale air and damp areas such as kitchens and bathrooms is captured and used to pre-heat or cool incoming air, reducing heating /cooling demand and associated energy requirements. The bypass mode also enables fresh air to circulate on warmer days without the need for air conditioning cooling, such as overnight in summer.

Features

- » Simultaneous air supply and exhaust improving air quality and climate control
- » Heat recovery to reduce heating requirements for output incoming air and bypass mode for fresh ambient air
- » Various filter options for preventing pollen, dust and pollution entering the home
- » Compact design, including vertical slimline design, low noise and left and right configurations

About ME & Other Solutions

Mitsubishi Electric Australia is wholly owned by Mitsubishi Electric Corporation, Japan. A representative office of Mitsubishi Electric was opened in Australia in 1967.

MEAUST was established in 1974 as MELCO Australia Pty Ltd and became Mitsubishi Electric Australia in 1982.

We deliver solutions across Living Environments, Home Appliances, Transportation and Heavy Engineering, Automation and Controls, Automotive Equipment, Transmission and Distribution, Semiconductors and Communication Systems.

Other Products/Solutions

Air Treatment

- » Dehumidifier
- » Pedestal Fan

Air Conditioning

- » Ducted
- » Wall Mounted
- » Multi Split System
- » Ceiling Cassette

Home Appliances (Fridges)

- » Multi-Drawer
- » French Door
- » Bottom Mount
- » Top Mount
